		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		This course is the first in a series of courses designed to introduce graduate students to the interconnections between micro practices and macro organizational and societal structures and influences. Particular attention will be paid to how individuals and collectives experience and enact fundamental tensions in their efforts to relate and organize.								
COM	COMS	COMS	7210	Communication Process in Small Groups	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		Theory and research in group social system, group modification of individual judgment, leadership styles, group vs. individual goals, and intragroup lines of communication in small problem-solving and learning groups.								
COM	COMS	COMS	7220	Communicative Process in Organizations	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		Interaction between organizational structure and communication within organizations. Emphasis on theoretical and methodological analysis. Primary focus on conducting major research project.								
COM	COMS	COMS	7230	Communication and Information Diffusion	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		Analysis of major approaches to data and information diffusion systems on local, regional, national, and international levels. Emphasis on acquisition analysis and dissemination of data as information, including critical points of interface and interaction between a system and its uses.								
COM	COMS	COMS	7250	Organization Communication Consulting: Foundational Perspectives	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		A focus on theoretical perspectives to organizational communication consulting and organizational development. Review of theory and research on communication training, consulting practices, communication variables involved in the client/consultant relationship, as well as intervention techniques.								
COM	COMS	COMS	7300	Introduction to Rhetoric and Public Culture	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		An introductory survey of ideas theorizing the relationships between rhetoric and public culture. Since many of these ideas offer critical and analytic perspectives, students will also learn how to engage in critical analysis of the relationships between rhetoric and public culture. Likely theories/theorists include: Kenneth Burke, Mikhail Bakhtin, Michel Foucault, Antonio Gramsci, Jergen Habermas, cultural studies, post-colonial studies, feminist studies, and postmodernism.								
COM	COMS	COMS	7320	Communication Historiography Methods	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Students develop bibliographic, analytical, and interpretive skills for dealing with primary source materials published in print and those made available in databases or online archives, including letters, speech texts, and audiovisual recordings in their historical contexts. This course is designed to help students become skillful library users, situate a research problem in context, and analyze primary historical materials.								
COM	COMS	COMS	7340	Narrative Approaches to Rhetorical Criticism	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This rhetorical methods class explores narrative approaches to rhetorical criticism. "Narrative" is construed broadly to encompass methods that view rhetorical transactions as dramatic events or as story-telling. Examples of narrative approaches to rhetorical criticism include Kenneth Burke's dramatic approach, Ernest Bormann's rhetorical vision/fantasy theme analysis, or Walter Fisher's narrative perspective. These approaches tend to construe rhetorical discourse as involving heroes/villains (protagonist/antagonist), conflict, and events (a plot).								
COM	COMS	COMS	7350	Advanced Techniques in Rhetorical Criticism	Seminar	4	12		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		The course offers an in-depth study of the theoretical underpinning and methodologies in specific techniques of rhetorical criticism. Although the specific rhetorical scholar or school of rhetorical scholars will vary by instructor, each seminar will engage the interdisciplinary dimensions of a specific technique of criticism of rhetorical interactions.

COM	COMS	COMS	7370	Performance Methods in Communication Studies	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course focuses on performance as a paradigm for the study of communication processes, broadly defined. Performance is approached as method, experience, metaphor, and subject of analysis. The course is both conceptual and practical. It introduces students to key concepts in performance theory such as ritual, identity performance, culture, play, performativity, performing, performance texts, and performance process. Students gain experiential training in performance ethnography, ethnography of performance, autobiographical performance, autoethnographic performance, social justice organizing and performance, and performative writing. This training is accomplished through exercises in textual, aural, performative, material, poetic, and other sense-based representation of performance and everyday life.								
COM	COMS	COMS	7400	Introduction to Health Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F,	REQUISITE:							
		COURSE DESC:		PR	Survey of the wide range of topics within the area of health communication, including cultural concepts of health, patient centered meanings of health, physician patient interaction, social support, health promotion campaigns, harm reduction campaigns, mass media constructions of health, risk communication, and health-related values and ethics.							
COM	COMS	COMS	7510	Quantitative Research Design in Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course focuses on practical and conceptual skills necessary for conducting high-quality quantitative research in communication. The course covers survey and experimental designs that are particularly relevant to communication studies.								
COM	COMS	COMS	7520	Quantitative Measurement and Preliminary Analysis in Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course covers measurement of quantitative data and the preliminary analyses required before conducting the substantive analysis of hypotheses and research questions. The measurement portion of the course focuses on decision making and techniques for producing and working with quantitative data, focusing in particular on conceptualizing and operationalizing quantitative variables. Students will explore statistical techniques for assessing measurement including reliability and exploratory factor analyses. The preliminary analysis portion of the course explores issues such as data cleaning, diagnosis and resolution of missing data issues, item-level analyses, forming multi-item scales, transformation, and evaluating confounds and covariates.								
COM	COMS	COMS	7530	Mediation and Moderation in Quantitative Methods in Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course provides an introduction to the quantitative research method of moderation and mediation. A moderator variable is one that influences the strength of a relationship between two other variables, and a mediator variable is one that explains the relationship between the two other variables. This course is both conceptual and analytical. Students learn how to theoretically propose moderation analyses vs. mediation analyses and how to rationalize one approach over the other. Students also practice moderation and mediation through multiple regression and simple path analyses techniques (SPSS, PROCESS, and AMOS).								
COM	COMS	COMS	7540	Methods of Content Analysis in Communication Studies	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Students learn theory and methods of quantitative content analysis of texts. Texts include interview transcripts, letters, social media content, visual communication, and traditional mediated texts.								
COM	COMS	COMS	7590	Topics in Quantitative Methods in Communication	Seminar	4	12		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course focuses on particular quantitative methods (e.g., multi-level modeling, meta-analysis, big data, longitudinal analysis, growth curve modelling, network analysis, etc.) not covered by regularly offered courses. Topics will vary and the course may be repeated three times as topics rotate.

COM	COMS	COMS	8200	Foundations of Organizational Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		This course is designed to provide an introduction to organizational communication. Specifically, this course covers both foundational and contemporary theory, research, and practice related to organizational communication. Students in this course are exposed to multiple theoretical, conceptual, and methodological approaches adopted across the field. Students think critically about how past and present scholarly trends guide our field.								
COM	COMS	COMS	8210	Foundations of Interpersonal Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		This course is designed to provide an introduction to interpersonal communication. Specifically, this course covers both foundational and contemporary theory, research and practice related to interpersonal communication. The course will study multiple theoretical, conceptual and methodological approaches to understanding communication in interpersonal relationships. Students will think critically about core research programs that have guided our field.								
COM	COMS	COMS	8220	Public Deliberation	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		Course addresses theoretical and practical dimensions of the public, private, civil, and technical spheres of human discourse, with an emphasis on the content, structure, suasiveness, and social cultural implications of the speech and action emerging from and contributing to those spheres.								
COM	COMS	COMS	8230	Integrated Research in Communication Studies	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		This course is designed to provide advanced students with an opportunity to apply communication theory in exploring questions and/or addressing problems that connect the realms of interpersonal communication studies and organizational communication studies. The course will be open to COMS graduate students who have successfully completed their first year of graduate studies and to graduate students from other programs in the university contingent on instructor permission. The precise questions explored and methods employed in that exploration will vary according to instructor interests and background.								
COM	COMS	COMS	8240	Communication and Identity	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course is designed to provide an introduction to identity and communication related specifically to interpersonal, intergroup and/or organizational communication contexts. Specifically, this course covers both foundational and contemporary theory, research and practice related to identity and identification in at least one of these substantive areas. Students study multiple theoretical, conceptual and methodological approaches to understanding communication and identity. The course requires students to think critically about core research programs that have guided our field.								
COM	COMS	COMS	8250	Communication in Personal & Social Relationships	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		The formation, maintenance, and dissolution of relationships comprises a large portion of our communication. These relationships may include romantic partnerships, friendships, family relationships, work relationships, and caregiver relationships, to name a few. In this class, students will investigate communication processes present in these relationships as well as relevant constructs, theories, and topics in order to gain a more complete and advanced understanding of interpersonal communication at both the abstract (theories, empirical research) and concrete (conducting their own research) levels.								
COM	COMS	COMS	8260	Communication, Innovation, and Organizational Change	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Advanced seminar in organizational communication that focuses on the ways communication enables organizing around innovation and facilitates organizational change. Specifically, this course highlights communication between individual organizational members, in groups and teams, across organizational units, and between organizations and their communities.								
COM	COMS	COMS	8270	Dialogue, Narrative, and Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course is an advanced seminar focusing on dialogue and narrative communication as topics in interpersonal communication and organizational communication theory and research. This course examines in-depth dialogical communication, narrative communication, and a combination of the two in composing the practices of interpersonal or organizational communication contexts.								
COM	COMS	COMS	8280	Topics in Advanced Interpersonal Communication	Seminar	4	12		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:

COM	COMS	COMS	8300	Rhetorical Theory	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		Covers main concepts and principal figures in the history of rhetorical theory. Begins with classical Greece and ends with postmodernity.								
COM	COMS	COMS	8310	Rhetoric and Popular Culture	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		This course introduces students to major works in the study of rhetoric, popular culture, and their relationship. It assumes that forms of popular culture (e.g., popular music, advertising, television programming, popular novels, etc.) are social artifacts that serve an important persuasive function in society. Popular culture provides conceptual and practical frameworks that orient individuals to the world. Thus, this course will help graduate students to develop a set of theoretical, methodological, and analytical resources for researching and interpreting the persuasive functions of popular culture in specific historical and geographical contexts.								
COM	COMS	COMS	8320	Rhetorical and Communicative Functions of Technology	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		This course examines the creation of meaning in verbal and graphic texts in speech, print, and electronic environments, with emphasis on the cultural significance of various communication technologies. In addition to discussions of theory, the course includes hands-on explorations of electronic examples (including radio, cell phones, games, and Internet applications), especially in contrast to print and speech, and consideration of social, economic, and technical dimensions of mediated culture.								
COM	COMS	COMS	8330	Feminist Rhetorical Theory	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		This course will begin with an examination of what it means to 'write women into the history of rhetoric'. This examination will provide the backdrop for an initial historiographical approach to women's contributions to rhetorical theory. Beyond this initial focus, the course will examine recent developments in feminist theory that impinge on or work from an understanding of rhetoric. As such, the course cuts across both historical and theoretical boundaries mapping the space for a feminist rhetoric.								
COM	COMS	COMS	8340	Rhetorical Criticism	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:								
		COURSE DESC:		Theories and methodologies of selected modern critics. Exploration of interdisciplinary dimensions in criticism of rhetorical interactions. Class and individual projects.								
COM	COMS	COMS	8350	Studies in American Rhetoric	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course surveys examples of American rhetoric, broadly construed to include rhetorical traditions of native peoples before European contact as well as genres of public address and other rhetorical forms in many media across the political, social, and media history of the United States. The communication discipline's critical approaches to the various ideological, regional, and demographic traditions of American rhetoric are central to the course. Students gain a foundation for research in both historical and contemporary American rhetoric, especially as manifestations of the ancient rhetorical principle of kairos--appropriateness to time, place, and circumstances.								
COM	COMS	COMS	8360	Topics in Communication and Cultural Critique	Seminar	4	12		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course addresses the convergent aims of rhetoric and cultural studies, viewing both traditions as theoretical invitations to political and cultural critique. It acknowledges the rich and contested histories of both intellectual traditions and engages modes of inquiry that attend to matters of culture, identity, representation, power, ideology, and democracy as they implicate and intersect with our understandings of communicative practices and behaviors. Through the course, students become familiar with the common influences and divergent histories of rhetoric and cultural studies so that they may more productively engage in scholarship that contributes to the critique of public culture. Topics vary. Students may repeat the course for a total of 12 credits.								
COM	COMS	COMS	8390	Topics in Rhetoric and Culture	Seminar	4	12		N	G50		0

COM	COMS	COMS	8400	Health Communication in Organizing	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		This course introduces students to research on health communication issues in organizing and provides a forum for developing a research agenda in this area. Underscoring course reading and assignments is the assumption that health, wellness, illness, and healing acquire meaning through symbolic interactions located within social, political, economic, and cultural structures.								
COM	COMS	COMS	8420	Health Communication and Culture	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		The purpose of this course is to examine the influence of culture on communicative aspects of patient and public health. The course explores theories of communication medical anthropology, and health education to understand the conceptual foundations of intercultural health. The course analyzes how peoples' health beliefs play out in interactions with patients and providers, and examines how public health strategies can be designed for specific cultural contexts. The larger purpose of this course is to train graduate students to communicate more effectively with patients, providers, and the public in multicultural health care settings.								
COM	COMS	COMS	8430	Relational Issues in Health Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		This course provides an overview of theory and research within the broad scope of relationships and health communication. Specifically, students gain an understanding of health communication in personal, peer, and provider/caregiver relationships, including research on how health conditions shape communication in these relationships, as well as how every day communication in these relationships influences health.								
COM	COMS	COMS	8440	Health Communication and Society	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		Seminar exploring the relationships among communication, public culture, and public perceptions of health and wellness. Surveys theoretical approaches (i.e., cultural studies, rhetorical analysis) and emphasizes the application of theory through writing and criticism. There is a strong emphasis on exploring current issues and challenges facing the health care industry and the public's understanding of health and wellness.								
COM	COMS	COMS	8450	Health Communication Campaigns	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course explores the theory and practice of communication campaigns that attempt to influence awareness, knowledge, attitudes, beliefs, and behaviors related to health. Students examine theories and research that inform the development, implementation, and evaluation of campaigns with an emphasis on practical implications. The course also focuses on values and ethical dilemmas in the design and conduct of campaigns.								
COM	COMS	COMS	8460	Persuasion and Social Influence in Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course focuses on the processes through which attitudes, beliefs, and behaviors are shaped, reinforced, and changed via communication. The course provides a survey of theories and research in persuasion as well as analysis of contemporary examples of persuasive communication.								
COM	COMS	COMS	8470	Communication and Uncertainty in Health and Illness	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		Uncertainty is common in diagnosis, prognosis, and treatment for many illnesses, and in relationships among patients, care providers, and family members, where illnesses experiences are addressed. Communication is a source of illness-related uncertainty, a resource for dealing with such uncertainty, and most generally the medium through which the presence and meanings of uncertainty are constructed. This course examines the nature of illness-related uncertainty, and theory and research on communication and uncertainty related to instrumental, identity, relational, and affect management; it examines these issues in contexts such as health information seeking, health screening and genetic testing, diagnosis and medically unexplained symptoms, treatment decisions, including end-of-life care, and social support.								
COM	COMS	COMS	8480	Environmental Communication	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course focuses on how we communicatively construct and affect the environment. Students analyze and critique a wide range of voices (e.g., citizen and community groups, Greens, corporations and lobbyists, scientists, anti-environmentalists, public officials and regulators, journalists) on a variety of environmental disputes. Students learn about environmental decision making and conflict resolution, advocacy, climate and environmental justice movements, science communication, and risk communication in the context of current environmental issues. The course is designed to accommodate primarily communication studies doctoral students, but it reviews foundational theories in sufficient detail to equip students from other programs to participate effectively. The course equips students to conduct original research on environmental communication and to engage in activism as appropriate to interests and exigencies.

		COURSE DESC:		REQUISITE:								
				Students examine the history, theory, science, and technology behind virtual, mixed, and augmented reality (these are collectively understood as cross reality, or XR). The burgeoning possibilities of VR, MR, and AR are introduced in a variety of contexts. Students evaluate the importance of human and machine interaction and work to understand how human perception and ethical decision making operate in conjunction with these new technologies. Emphasis is placed on the critical and ethical analysis of virtual reality technologies, especially as they relate to the societal effects of human-centered interaction. Students engage with scientific, industrial/creative, mathematical, ethical, philosophical, and technical aspects across the spectrum of XR.

COM	ECT	ITS	1801	Introduction to Scripting	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		The terms scripting or coding refer to the process of creating small computer programs or "scripts" in a less formal context than traditional computer programming. Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students with little or no scripting experience. The process of breaking down a problem into steps that can be automated is introduced. Students work in a drag-and-drop scripting environment to practice this process before moving to the python scripting language. Throughout the course students focus on creating useful solutions across a number of disciplines.								
COM	ECT	ITS	2010	Understanding Internet Technology	Lecture	3	0	2AS	N	U10		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Students survey the technologies that connect users to information, viewers to content, and customers to merchandise. Topics covered include a review of the foundations of Internet technology, with additional study of corporate data centers, WiFi, and home networks all connected via the Internet. Students examine how modern organizations are leveraging Information Technology (IT) to speed up and streamline communication, and enable new products and services that rely on Internet technology.								
COM	ECT	ITS	2140	Introduction to Information and Telecommunication Systems	Lecture	3	0		N	U10		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Students develop an understanding of the systems and services that provide the compute power for workloads in modern information technology environments and Internet based services. Students also explore the relationship of computer and network performance and security to a wide variety of computer systems, including the relationship of users to the data that is stored and manipulated in computer systems. Students analyze how changes in technology and the respective technology marketplaces feed back into the development of Internet hardware, software, and services.								
COM	ECT	ITS	2300	Data Networking	Laboratory	4	0		N	U30		75
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Students develop an understanding of the principles of network technologies that enable modern information and telecommunication systems. The course begins with an examination of the physical layer and various transmission media. Students also study the link and network layers and gain an understanding of the principles of data networking, virtual circuits, packet switching, and routing. Students examine the transport layer along with a description of typical networking applications, with an emphasis on the use of these technologies and concepts in the Internet. These topics are further explored in hands-on lab exercises

Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students who have some prior experience with scripting. Students without this experience should take ITS 1801 first. In this course, python is used to develop solutions to practical problems across various disciplines. Throughout the course, best practices for code version management using git are introduced. In the second half of the semester, students have the option to expand beyond python to learn scripting in either bash or PowerShell.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 3110								
		COURSE DESC:		Examination of the technical components of deployed telecommunication networks. Attention is given to the functional elements of switch technologies and switched services, to carrier technologies and their utilization, and to intergration of these technologies for the public switched network and PSN-based services, such as Switched Multimegabit Data Service, Fiber Distributed Data Interface, Frame Relay, and ISDN.								
COM	ECT	ITS	3790	Geographic Analysis of Telecommunication Systems	Lecture	3	0		N	U30		50
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 2140								
		COURSE DESC:		Encourages students to consider the technical, socioeconomic, and policy aspects of telecommunications technologies, particularly from a geographic perspective. Utilizes readings, lectures, and discussions to explore various issues associated with telecommunications technologies, including broadband availability, telecommunications tower siting, cellular coverage areas, and the spatial digital divide. Students apply their knowledge through class activities.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 2140 and Jr Status.								
		COURSE DESC:		The course examines market and policy issues associated with emerging communication technologies. Students evaluate unique characteristics of technology markets and how managers and policy makers respond in these dynamic markets. The emphasis is on current market and policy issues and challenges. Representative topics include how technology standards are established, copyright and digital rights management, cryptocurrency, and regulatory issues with artificial intelligence.								
COM	ECT	ITS	4020	Strategic Decision Making in Information and Telecommunication Industries	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ECON 1000 and C or better in ITS 2140								
		COURSE DESC:		Students analyze challenges facing firms in information and telecommunication industries and managerial strategies employed to address these challenges. Topics include standardization, network effects, two-sided markets, positive feedback loops, customer lock-in, learning economies, versioning, pricing strategies, rights management, information security, and antitrust.								
COM	ECT	ITS	4050	Competition and Market Structure in Telecommunications Industries	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 4020								
		COURSE DESC:		An in-depth analysis of policy and market issues of fundamental concern to the voice/data communication competitive environment. Examples of such issues could include monopoly and competitive market benefits to the consumers, measuring market concentration, merger analysis, antitrust, and other government remedies for market power.								
COM	ECT	ITS	4070	International Communication Networks	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: C or better in ITS 3019								
		COURSE DESC:		A study of international communication organizations and standards setting bodies (European Commission, the ITU, Internet Engineering Task Force, IEEE, international satellite organizations, etc.). The course will explore current issues in international standards and regulations, including the impact of the Internet on international communications service providers and government policy makers.								
COM	ECT	ITS	4110	Pricing of Telecommunications Services	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 3019								
		COURSE DESC:		Examination of pricing, price-setting and price changes for telecommunication services. Pricing topics examined include: competitive market pricing; regulated pricing; flat-rate and measured service pricing; pricing of equipment; pricing of local, interconnection, and long-distance services; and the pricing of mobile and Internet-based telephone services.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Jr or Sr								
		COURSE DESC:		The course examines the impact of surveillance enabled by communication and information technologies on the ability of individuals to maintain private spaces. Students evaluate theories of privacy and surveillance, surveillance technologies, the contours of national and global surveillance systems, and laws and policies that regulate those systems. Students apply ethical frameworks to assess surveillance technologies and their impact on privacy. Students examine surveillance-related technologies such as mobile phones, drones, the World Wide Web, social media, predictive algorithms, and the Internet of Things. Government surveillance technologies and systems such as those revealed by Edward Snowden and Wikileaks are also covered.								
COM	ECT	ITS	4320	Gender and Information Technology	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.								
COM	ECT	ITS	4330	IT Compliance and Planning	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: C or better in ITS 2300								
		COURSE DESC:		Students examine various federal, state, and international IT compliance requirements and management strategies to meet those requirements. Alternative IT compliance frameworks are considered. Students also examine the IT planning cycle and evaluate the appropriate role of compliance in the strategic IT planning process.								
COM	ECT	ITS	4370	Wireless Telecommunications	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: C or better in (ITS 2300 or 330)								
		COURSE DESC:		Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process.

		COURSE DESC:		Study of regulatory systems and policy issues with a focus on U.S. markets. Topics covered include the institutions associated with government oversight of markets and policy making; basic policy development at state and federal levels; service quality; universal connectivity; interconnection issues; and spectrum management.								
COM	ECT	ITS	5020	Strategic Decision Making in Information and Telecommunication Industries	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Students analyze challenges facing firms in information and telecommunication industries and managerial strategies employed to address these challenges. Topics include standardization, network effects, two-sided markets, positive feedback loops, customer lock-in, learning economies, versioning, pricing strategies, rights management, information security, and antitrust.								
COM	ECT	ITS	5050	Competition and Market Structure in Telecommunications Industries	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 5020								
		COURSE DESC:		An in-depth analysis of policy and market issues of fundamental concern to the voice/data communication competitive environment. Examples of such issues could include monopoly and competitive market benefits to the consumers, measuring market concentration, merger analysis, antitrust, and other government remedies for market power.								
COM	ECT	ITS	5070	International Communication Networks	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		A study of international communication organizations and standards setting bodies (European Commission, the ITU, Internet Engineering Task Force, IEEE, international satellite organizations, etc.). The course will explore current issues in international standards and regulations, including the impact of the Internet on international communications service providers and government policy makers.								
COM	ECT	ITS	5110	Pricing of Telecommunications Services	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Examination of pricing, price-setting and price changes for telecommunication services. Pricing topics examined include: competitive market pricing; regulated pricing; flat-rate and measured service pricing; pricing of equipment; pricing of local, interconnection, and long-distance services; and the pricing of mobile and Internet-based telephone services.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 6250								
		COURSE DESC:		The study and use of methodology for analysis, specification, and design of communication networks. Extensive application case studies derive requirements from statistical traffic characterization and modeling of voice, data, and video sources. Networks designed include fiber optics, wireless, Ethernet, SONET/TDM, and IP packet technologies.								
COM	ECT	ITS	5310	Privacy in the Internet Age	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		The course examines the impact of surveillance enabled by communication and information technologies on the ability of individuals to maintain private spaces. Students evaluate theories of privacy and surveillance, surveillance technologies, the contours of national and global surveillance systems, and laws and policies that regulate those systems. Students apply ethical frameworks to assess surveillance technologies and their impact on privacy. Students examine surveillance-related technologies such as mobile phones, drones, the World Wide Web, social media, predictive algorithms, and the Internet of Things. Government surveillance technologies and systems such as those revealed by Edward Snowden and Wikileaks are also covered.

COM	ECT	ITS	5320	Gender and Information Technology	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.								
COM	ECT	ITS	5330	IT Compliance and Planning	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Students examine various federal, state, and international IT compliance requirements and management strategies to meet those requirements. Alternative IT compliance frameworks are considered. Students also examine the IT planning cycle and evaluate the appropriate role of compliance in the strategic IT planning process.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: ITS 6250								
				Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process.

		COURSE DESC:		Provides an overview of the field and introduces the students to the fundamentals of research, including the steps involved in identifying a research problem, how to formulate a problem statement, selection of appropriate research methodologies, accumulating and analyzing relevant empirical data, writing research results. Will explain and analyze various research methods and tools, both quantitative and qualitative.								
COM	ECT	ITS	6030	Advanced Policy and Regulation for ICT Networks	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ITS 5019						
		COURSE DESC:		An exploration of advanced topics in telecommunications policy and regulation in the United States. Emphasis will be on primary sources, e.g., FCC and State Public Utility Commission Orders, appellate court decisions, and other documents. This elective will build on the foundation provided by ITS 5019. Subject matter will include state and federal activity related to local competition, access charge reform, regulation of broadband services, and spectrum management.								
COM	ECT	ITS	6090	Telecommunications and Economic Development	Lecture	4	0		I	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Permission required						
		COURSE DESC:		An examination of economic development issues and potential telecommunications strategies to assist in solving development problems. The problems of less developed countries will be studied, as well as the potential impact of communication networks and services on development in undeveloped pockets of the developed world. Will also examine urban ills that exist in the developed areas of developed countries and will explore the potential role of communication networks to implement solutions to those urban ills. Will also explore the potential role of communication networks on the development of global markets in the service sector and the impact of this trend on both developed and less developed nations.								
COM	ECT	ITS	6250	Information Networks	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Introduction to the architecture of information networks and the applications built on this architecture. Students study the fundamental concepts of communication networks, switching techniques, transmission systems, protocols, and distributed applications. Voice, data, image and video communication networks are all addressed.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ITS 6000 and 6250						
		COURSE DESC:		Employs extensive readings and illustrative case studies in the analysis of the strategic concerns involved in the successful deployment of voice, data, image and information technologies and services within user organizations, service providers, and vendor enterprises. The successful deployment of these technologies and services requires an understanding of the interplay of an array of technical concerns, policy considerations, markets and human/social issues. Provides students with the opportunity to grasp the interplay of these concerns and issues through strategic assessment, lifecycle management, and information and telecommunication system procurement.								
COM	ECT	ITS	6790	Theory of Communication Networks	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ITS 6250						
		COURSE DESC:		Intensive study of communications networks organized by the layered protocol architecture model. Topics include transmission media, topology, and encoding; link-layer access methods, flow control and error detection; network addressing and routing; and end-to-end transport mechanisms. Special emphasis on traffic characterization, network performance, and network security. Suggested background includes probability and statistics; class involves extensive analysis and introduces simulation software tools.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (ITS 2140 or WGSS 1000 or 6 hours Tier II Social Science) and Sr only								
		COURSE DESC:		Examines the effects of the "information age" on women's lives. Telephones, computers, and the Internet have revolutionized the way people work and live. These technologies have affected men and women differently, however. Discusses the information age and its impact on domestic and work life. It pays special attention to the relationship between women and two of the main information technologies: the telephone and the computer. The objective is to explore the ways in which these technologies have been "gendered". Also examines the role of women in relation to the telegraph, the typewriter, video games, the Internet, and other communication and information technologies.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Contemporary American Documentary looks at contemporary issues in American life through the work of distinguished non-fiction filmmakers. Documentaries dealing with all aspects of American society are screened and discussed. Politics, race, poverty, religion, big business and war are among the issues dealt with. The aim of this course is to illuminate and examine the issues, and to develop critical viewing skills so that students become savvy consumers of such media.								
COM	MDIA	MDIA	2135	Documentary Genres	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Soph or Jr or Sr						
		COURSE DESC:		Investigates the construction of nonfiction film and televisual documentary imagery, from the inception of motion pictures (ca 1895) through the current postmodern American landscape. In the course, a representative sampling of the documentary film canon by historical figures is screened, which will assist in gaining understanding of the contemporary context within which these documentary constructions were assembled. Because this course is taught within the School of Telecommunications, the second part of the course necessarily moves toward examining the influences American network television, cable, and video technology have had on the form.

				GEC1: A-F REQUISITE: MDIA 5610 or COMM 5610 Digital transformation is an example of the need for businesses to innovate and change as the market and consumer desires evolve. As opportunities and risks are identified, organizations need the ability to transform business models or processes to account for digital media technology and economic shifts; and develop creative, innovative digital media products or services to adapt to evolving audience or user demands. This course is devoted to the theories and best practices that enable developing and sustaining an organizational culture of continuous digital media transformation and innovation. Particular attention is given to communicating effectively within and across groups, teams, organizational units, and external communities; building trust both within a creative media organization and with external constituencies; and the fundamentals of assessing readiness for digital media transformation.

		COURSE DESC:		Provides an overview of the communication and development field and serves as a foundation for the subsequent in-depth study and analysis of specific aspects of the role of communication in development and social change. Explores the complex relationships between communication and human and social development, and the role that communication plays in promoting (or impeding) social change and development. Throughout the seminar participation, collective research and teamwork are emphasized, and participants are expected to undertake both individual and group projects.								
COM	MDIA	MDIA	6081	Introduction to Theory in Communication and Development	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers.								
COM	MDIA	MDIA	6082	Introduction to Research in Communication and Development	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course serves as one of the three core courses required for students in the Communication and Development Studies graduate program during their first semester. It introduces "Comm Dev" students to basic principles associated with conducting graduate level research, with some focus on key research considerations related to the field of Communication for Development. With that in mind, the course covers critical elements necessary for conducting graduate-level, scholarly research more generally, including identifying a research topic; accessing scholarly research; writing a literature review; and research ethics. The students are also introduced to research design, and to qualitative and quantitative methodological approaches to collecting and analyzing data. At the same time, methodological elements that help define Communication for Development as an academic and professional field serve to further inform readings, lectures, and discussions. Course topics with this relatively more specific programmatic focus include monitoring and evaluation; rapid appraisal methods (e.g. mini-surveys, transect walks, and community mapping); and participatory methods (e.g. focus groups and community discussions).

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Will address counseling and psychotherapeutic theories. Included will be outcome research associated with various counseling interventions. Attention will be given to the personal characteristics of the client and counselor, and how those characteristics impact the therapeutic process. Also included will be studies of basic interviewing, assessment and counseling skills related to the various theories addressed. Consideration will be given to factors that influence the helping process including age, gender, and ethnic differences, and ethical practices of the counselor. This will be accomplished in a manner that encourages the student to engage in critical thinking and analysis of the counseling theories reviewed. The class will focus on practice rather than lecture. Counseling is an applied activity, and for it to be learned, a student is first encouraged to experience its fundamental elements. It is critical that all assigned materials are read prior to attending the class.

		COURSE DESC:		This seminar is designed to prepare students for professional employment. It is the culminating experience of the doctoral coursework following the comprehensive examinations. The doctoral program in Counselor Education provides students with a common core experience which includes clinical practice, teaching and supervision, and research. The doctoral internship allows for some variety in the internship placement to encourage the individual expression of students' interests and career goals. Students, thus, may choose to complete their internship in one of the specialization areas: school or clinical mental health counseling, a college teaching experience, an administrative and research experience, or some combination. A student may have a placement at his or her site of employment although 20% of the experience must involve new experiences.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: EDTE 1000 or EDHP 3530								
		COURSE DESC:		Public schools are institutions of a democracy. One measure of their success is how well they educate all children, regardless of race, class, ethnicity, gender, disability, sexual orientation, family configuration, language, and religion. Students observe, analyze, and reflect upon the advantages and tensions associated with teaching in a culturally diverse environment and society. They explore the cultural, social, and historical dimensions of education as they relate to cultural diversity. Students examine the cultural and historical context of domination and exploitation in the U.S.; the self as an anti-bias educator; and the curriculum and pedagogy in an anti-bias classroom.

EHS	EDST	EDCS	5010	History & Philosophies of Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the citizen to the state, (c) the nature of the "good" life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples.								
EHS	EDST	EDCS	5020	Education and Transformative Social Change	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines educational thought, theory and assumptions regarding the role that education may play in bringing about transformative social change that addresses issues of social justice. Examples drawn from contemporary innovative alternative community or school-based programs, guerilla radio or internet programming, conflict reduction programs bringing children of warring parties together, to the historical contributions of Freedom Schools from the Civil Rights Movement, the Highlander Folk Center in Tennessee, and the liberatory pedagogy of Freirean Culture Circles, among other educational initiatives. Change may occur within a school setting, or through community-based educational programs, or via larger national/international educational movements and programs. Grassroots organizing will be noted.								
EHS	EDST	EDCS	5030	Advanced Study in Philosophy of Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Identifies particular philosophical schools of thought related to education or specific philosophers who address education. Examples of philosophers range from John Dewey to Alaine Locke to Maxine Greene and bell hooks who address the educational realm directly. Other philosophers who include educational philosophy in their general bodies of work include those such as Plato, Rousseau, Wolfe, Rorty and Foucault, among others. Potentially every philosophical school of thought from Ancient Greek philosophy to Existential philosophy to Postmodern and Post-Colonial philosophy can be studied for its educational implications. Each semester offering will select from among possible schools of philosophical thought and/or movements, as well as choosing from among specific philosophical thinkers.								
EHS	EDST	EDCS	5040	Sociology, Politics, and Change in Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Education is not a neutral endeavor. It is both a societal enterprise and a localized social activity; as such, it is embedded in an ever changing socio-cultural context. Taken seriously, these two ideas point our attention to several sociological and political questions about education such as, What is the purpose of education? Who benefits from education as it is constituted? Who decides curriculum, structure, funding, etc.? What are the implications for any given educational setting? Who is marginalized by the way we "do" education in the U.S. context? What does educational change look like? Is change possible in U.S. schools, and if so, in what manner? Critically examines the complex interactions of societal structures and political ideologies as they intersect, influence and impact educational realities in U.S. public schools.								
EHS	EDST	EDCS	5090	Education and the Democratic Community	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR								
		COURSE DESC:		Explores the relationship between democracy and education from multiple perspectives, including liberal democracy, pragmatist democracy and radical democracy. Critically examines concepts important to a democracy that relate to the distinction between public and private spheres, pluralism, community, individuality and responsibility, for example. Begins with assumption that schools in the U.S. have a significant role in educating for participatory democratic citizens. Examines whether and how our public schools accomplish this aim, or whether they in fact, work contrary to it. Examines pedagogical practices and school as an institution and inquire about their effectiveness in educating for an inclusive and participatory democracy. Examines contemporary and enduring issues in our democracy that are connected to or impact our students, schools and communities.								
EHS	EDST	EDCS	5100	Introduction to Critical Studies in Education	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines how educational systems are situated within the context of culture, knowledge, the economy, media and power. Utilizing interdisciplinary sources, explores the relationship between school and society with interpretive, normative, and critical theories and methods. Applies critical and cultural theories to deconstruct the socio-cultural influences and hegemony acting upon and utilizing education; the implications of those factors on the purposes of education, how we educate, foster student engagement and create successful learning communities in school and beyond will be examined. Attention given to contemporary dimensions and dynamics that intersect and impact education today, i.e., youth culture, marginalized voices, and popular media and culture. Examines several alternative theoretical and pedagogical approaches that have the potential to more closely fulfill the democratic 'promise' that education can indeed, make a difference in individual lives and create more socially just people, schools, communities and world.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines the historical and contemporary issues of diversity in education. Schools and classrooms do not exist in a socio-political vacuum. Premised on how education has been and continues to be a site, if not a tool, for power and privilege as well as resistance and social justice. In addition to leading students through a self-examination of their own assumptions and beliefs surrounding diversity, explores historical events and legal cases related to diverse students in schools; theories of identity and culture and how these theories impact constructions of diversity and multicultural education; and strategies for effectively engaging issues of diversity in educational contexts. Offers an opportunity to engage in diversity education in the larger community through a service learning experience.								
EHS	EDST	EDCS	6011	Cultural Pedagogy for Historically Marginalized Peoples	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Provides opportunity for in-depth study of various culturally-based pedagogies that have been developed for the education of historically marginalized peoples. May be couched in historical movements such as the Black Power Movement or the American Indian Movement of the 1960 and 70s, or may be more contemporary pedagogical approaches such as: (a) dual language immersion schools for Spanish and English speaking students, (b) centered education approaches for Native American and African American students in particular, (c) Freirean literacy approaches for adult learners from working class or working poor backgrounds, (d) gender segregated approaches or separate learning environments. In addition, explores other potential pedagogical strategies based upon understanding cultural contexts and the contemporary educational climate.

EHS	EDST	EDCS	7010	The Social and Cultural Contexts of Leadership	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Examines the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examines leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vets leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership.								
EHS	EDST	EDCS	7020	The Moral and Ethical Dimensions of Leadership	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one's moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Provides an advanced examination of the relationships between schools and society, focusing predominantly upon critical theory and its derivatives, in order to understand the role of education and schools' unique position within society. Any institution with power has the ability to do good, as well as the power to do harm. Explores empowering pedagogies that emanate from critical theories in order to address the role of power and related concepts in educational institutions and provide pedagogical tools for educators and students to critically examine the implications and consequences of how we educate. Examines the societal, cultural, institutional and personal domains as we inquire into how we might educate all our young people well in the midst of changing social and institutional contexts, power, and resistance.

		COURSE DESC:		REQUISITE: Required course for all teachers seeking Ohio licensure. Acquaints candidates with technology applications commonly found in educational settings. Using TPCK theoretical framework (Technological Pedagogical Content Knowledge) encompasses effectively identifying, locating, evaluating, designing, preparing and efficiently using educational technology as instructional resources in the classroom as related to the principles of teaching and learning. Develops increased classroom communication abilities through lectures, discussions, modeling, computer lab experiences and completion of a comprehensive portfolio project. Utilizes variety of open source technologies to develop and enhance classroom instruction including hardware and software to develop skills in word processing, using spreadsheets, use of the Web, evaluating educational software and evaluating web pages, use multimedia and create a Web page. Utilizes low, medium and high technology to enhance classroom instruction, communication and classroom management. Designed to meet the requirements of the International Society for Technology in Education NETS Standards for Teachers (http://www.iste.org/Content/NavigationMenu/NETS/ForTeachers/2008Standards/NETS_for_Teachers_2008.htm) and the National Council for the Accreditation of Teacher Education (NCATE) technology requirements.

		COURSE DESC:		Visual literacy is defined as the ability to understand and use images, including the ability to think, learn, and express oneself in terms of images. Improves the learner's visual literacy knowledge and ability to master image manipulation and distribution software. Focuses on using critical thinking skills to interpret and create instructional visual images, with particular emphasis on integrating images into mediated learning experiences.								
EHS	EDST	EDCT	6011	Instructional Design	Lecture	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Introduces designing instruction in mediated environments. Teaches how to analyze, implement and evaluate instructional experiences, particularly those delivered through or mediated through digital communication and interaction technology. Reviews how to conduct a needs analysis, task analysis and learner analysis. Will utilize these analysis skills to design instruction. Strategies for instructing declarative, conceptual, procedural, algorithmic knowledge covered. Utilizes strategies to create presentations, practice and feedback systems. These systems require assessment and evaluation to create congruent learning experiences. Skills applicable to any learning situation, however, particular attention paid to mediated environments (computer tutorials, simulations, games, etc.). Each week a component of instructional design is done leading to a final project demonstrating their abilities. Traditional midterm and final examinations are required. Lays foundation for the rest of the masters program.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Utilizes relevant methods and theoretical perspectives to analyze local, regional and global educational policies. Involves reading and discussing sociological texts, policy study literature and conducting collaborative research analysis and evaluation on different educational policy initiatives.								
EHS	EDST	EDLE	7071	Comparative Cultures and Education	Seminar	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Focuses on studies in learning as a social process with emphasis on the non-Western experience among others. Aims at expanding students understanding of education through the examination of other approaches to educational thought and practice. Ultimate aim is to immensely enhance students understanding of their own traditions through a better understanding of educational traditions of other societies and cultures. Predisposes students to re-orient themselves and place them in positions to reexamine and critically reflect on their own traditions in somewhat different ways. Our increasing interdependence in a global context makes it imperative that we understand how other societies solve similar problems in education. Among the countries and regions to be interrogated are Malaysia, Singapore, China, sub-Saharan Africa, Austria, U.S., Canada, Australia and New Zealand.								
EHS	EDST	EDLE	7072	Education & Development in Developing Countries	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		Interdisciplinary course focuses on the role of learning systems in changing developing societies; historical and ethnographic studies of pre-colonial, colonial, and post-independence education; and education and training as tools for contemporary change and socioeconomic development. What are the implications of these for any given educational setting? Who are marginalized by the way we conduct education? What is the individual's responsibility in building a community? How is education connected with Development and vice versa? The challenges posed to these traditions in an increasingly global world community in the 21st century are discussed. Designed not to answer questions but to question answers. This mode of thinking can create space for dialogue that will assist each of us to come to a fuller understanding of the role of education in our respective societies as well as the world at large.

		COURSE DESC:		The purpose of this course is for students to learn about and utilize one of the different research methodologies and methods often employed in educational research, assessment and evaluation. Students learn how to critically evaluate research literature, conduct a literature review, address ethics, form research questions, choose research designs and methods, utilize data collection and analysis, and disseminate research. Hence, students learn about the different approaches to educational research including quantitative, qualitative and mixed methods research. Finally, students learn about the different theories, methods, research designs, and analytical tools utilized in these different methodological frameworks.

		COURSE DESC:		This course provides an introduction of mixed methods research in social and educational sciences to graduate students who are already familiar with quantitative and qualitative research and students who may conduct mixed methods theses/dissertations. Mixed methods research is more than simply collecting both quantitative and qualitative data, and instead, it integrates quantitative and qualitative methods from the research-planning phase to the implementation phase. This course focuses on major characteristics of mixed methods and three basic designs, i.e., convergent parallel design, explanatory sequential design, and exploratory sequential design. It offers individuals a foundation for conducting mixed methods research.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: EDRE 7200 and 7500 CR, PR								
		COURSE DESC:		The overall purpose of this course is for students to design and develop a research proposal. In the process, students learn to critically evaluate research literature. Students develop an understanding of how to develop a research problem or question(s) and articulate the methodological framework required to answer their research question(s). In addition, students address in their research proposal theory, data collection methods, sampling strategies, cite selection, data analysis and researcher ethics.								
EHS	EDST	EDRE	7500	Introduction to Qualitative Research Methodology in Education	Lecture	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR								
		COURSE DESC:		In this course, students learn about the historical and theoretical underpinnings of qualitative methodology. Students utilize the three primary methods of data collection in qualitative research: documents, interviews and observations. Students examine the different theories, sampling strategies, analysis and research designs employed in qualitative methodology. Students design a qualitative inquiry project and explore how to ensure credibility and trustworthiness in the findings of their research. Finally, ethics, CITI and IRB protocols are addressed.

		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: EDRE 7500 PR								
		COURSE DESC:		This course explores the development of ethnography as a field. It explores the many different kinds of ethnography. It examines the process of designing and executing ethnographic research studies. Students learn of different kinds of participant observation, field notes, ethnographic interviews, and useful cultural artifacts and documents often employed in ethnographic research. Different approaches to interpreting ethnographic data are explored as well.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: EDRE 7500								
		COURSE DESC:		In this advanced research course students study various qualitative data analysis techniques and examine ways in which different theories inform the analysis and interpretation of various qualitative data sources. This course in qualitative data analysis informs students about the history, substantive theories, research designs and the inductive methods employed to conduct qualitative data analysis. Additionally, students engage in learning about the different computer assisted qualitative data analysis software and traditional data analysis procedures. In sum, this course assists doctoral students in disseminating the outcomes of their qualitative research through developing skills for documenting their data analysis processes, procedures and findings.

EHS	EHS	PCOE	2301C	Building Leadership in Adolescent Girls through Mentorship	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students have the opportunity to be paired with local area middle school 7th and 8th graders and Ohio University's Women's Center to conduct the Young Women's Leaders Program. This program has a gendered focus in looking at the experiences of women but is open to anyone who believes they would benefit from a program with that lens. If students would like to be considered as a mentor, they are required to complete both a BCI and FBI background check. The fee for this totals \$62 and should be paid for by the student. Additionally, the service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), though they will no longer be enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that will enable students to create workshops that may be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course.

				ELIGIBLE GRADES:								
				COURSE DESC:								
				During this workshop, current P-12 teachers examine various approaches to mentoring early field experience preservice teacher candidates. Discussions address topics such as planning and goal setting, getting teacher candidates involved and engaged with the students and their instruction, and encouraging reflection. Finally, special attention is given to the utilization of teacher candidates to increase instructional opportunities for students and personal growth opportunities for teachers. At the completion of the 15 clock hours of on-line facilitated learning and assignments of the workshop, participants receive a Certificate of Completion and 1 semester hour of graduate credit. This course cannot be used towards any Ohio University degree requirements.

EHS	EHS	PCOE	5906	TQM: PROFESSIONALISM AND TEACHER LEADERSHIP	Lecture	1	3		N	G40		0
				ELIGIBLE GRADES:								
				COURSE DESC:								
				This workshop focuses on providing in-service teachers with knowledge and skills they will use while working with teacher candidates in order to support their growing capacities in professionalism and teacher leadership. Growth in professionalism and teacher leadership is explored for the purposes of modeling and scaffolding a deeper understanding of professional ethics, policies, operating standards and professional conduct of educators.								
EHS	EHS	PCOE	5907	Trauma Informed Practice for Mentor Teachers in P-12 Settings	Lecture	1	99		N	G40		0
				ELIGIBLE GRADES:								
				COURSE DESC:								
				This professional development workshop is designed for P-12 teachers working with students and families who have experienced trauma and substance abuse. The modules focus on the role of teachers in recognizing warning signs of substance abuse, implementing prevention efforts, promoting social/emotional learning competencies (SEL) in the classroom, and helping students develop individual and relational resources. This module compliments the HOPE (Health and Opioid Prevention Education) curriculum funded by the Ohio Department of Higher Education and developed by health educators and classroom teachers. At the completion of the 15 clock hours of online facilitated learning and assignments, participants receive a Certificate of Completion and one semester hour of graduate credit. This workshop cannot be used toward any Ohio University degree requirement.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	EDTE 3730 concurrent and Admission to Advanced Standing						
		COURSE DESC:		This course develops students' knowledge, skills, and dispositions for the teaching profession in a changing world, including the skills to systematically design, implement, evaluate, and reflect on secondary school teaching and learning to support higher order thinking abilities among children. It addresses the standards and competencies required for teacher licensure, including alignment of various instructional methods (e.g., direct instruction, cooperative learning, and effective classroom management) with theories of learning, motivation, and affect. It also addresses differentiation of content and instruction and the importance of collaboration with guardians, community members, and other education professionals to support all students through an early field experience.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	EDSE 3510 and (Jr or Sr)						
		COURSE DESC:		This course prepares Adolescent-Young Adult teacher candidates with a broad-based understanding of central issues involved in the learning and teaching of science, and the nature of knowledge in science. These concepts are integrated into practical activities designed to prepare the candidates for teaching in actual science classrooms and in the community through the integration of service learning projects. Candidates are expected to design individual lessons and a unit that take into consideration national and state standards, classroom management, student safety, learning theory, assessment, the nature of science, and science in the community. Candidates are also expected to apply accurate science content, inquiry skills, and practices through class/field activities and assignments. As this is a service learning designated C course, students are required to actively participate in and reflect upon meaningful service commitments within the community. Travel to and from service learning sites is necessary and is organized collaboratively through our class. These service learning obligations require out of class time; however, all efforts are made to ensure that scheduling and service options are flexible and meet student professional needs and interests.

				This is an advanced course for those individuals who desire to gain greater knowledge and depth in the complex issues surrounding human learning and development for young children. Content in the course covers the major theories of child development and learning to provide a framework for the presentation of cognitive, social and emotional development for all young children. The course emphasizes factors that influence growth, learning, and development for all young children from birth through age eight. The content describes implementation science, including designing instruction of a high enough intensity to promote positive outcomes for all young children and coaching colleagues and caregivers to interact in positive and intentional manner. Students discuss the classic and current theoretical studies as they relate to human development and what these theories mean for young children with diverse needs. The course has an emphasis on applications and case studies for the home, community, and classroom settings for infants, toddlers, and young children who have and are at risk for developing disabilities.

				This course is designed for practicing teachers interested in developing skills necessary for peer mentoring of induction year teachers. Skills to be addressed include classroom observation, providing constructive feedback, and analysis of all components of the teaching process. Following extensive research and an analysis of the theoretical underpinnings of the teaching and mentoring processes, teachers will develop personalized plans of action in response to self-reflection and mentoring situations. The purpose of this course is to prepare practicing teachers with the tools necessary to successfully support first year teachers in a peer mentoring situation. An analysis of potential strategies will be conducted and foundational skills will be developed and refined/enhanced. This course provides training to potential mentor teachers, increasing the cadre of available mentors thereby building capacity across the nation as the number of new teachers grows and retention continues to be an issue of importance.

		COURSE DESC:		Flow and pressure distribution in multi-loop networks, dynamics of flow in pumps and turbines, uniform and nonuniform flow in open channels, culvert hydraulics, hydrologic cycle, groundwater flow, surface flows, and water storage.								
ENT	CE	CE	3530	Basics of Environmental Engineering	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CHEM 1510 and (Jr or Sr)								
		COURSE DESC:		Engineering concepts, theory, design, and practice as applied to solution of problems of environmental technologies; waste management; drainage; and control of water, soil, and atmospheric pollution; social and environmental impact of these solutions.								
ENT	CE	CE	3610	Transportation Engineering	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3110								
		COURSE DESC:		Introduction to Transportation Engineering with emphasis on transportation planning concepts and multi-modal design elements.								
ENT	CE	CE	3700	Geotechnical Engineering	Lecture	4	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ET 2220 and GEOL 2830 and (CE 3400 or concurrent)								
		COURSE DESC:		Soil compositions, physical and chemical properties, and classifications; water movement and seepage problems; consolidation and shear strength; applications to earth structures, retaining walls, slope stability, shallow & deep foundations, and soil erosion.								
ENT	CE	CE	3710	Soil Engineering Laboratory	Laboratory	1	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3700 or concurrent								
		COURSE DESC:		Classification of soils and determination of their properties through tests; grain size analysis, Atterberg limits, relative density, Proctor testing, permeability, direct shear, consolidation, unconfined compression, and CBR test.								
ENT	CE	CE	3800	Civil Engineering Materials	Laboratory	4	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ET 2220								
		COURSE DESC:		Engineering properties of materials used in civil engineering applications including metals, concrete, timber, and composites.								
ENT	CE	CE	3800	Civil Engineering Materials	Lecture	4	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ET 2220								
		COURSE DESC:		Engineering properties of materials used in civil engineering applications including metals, concrete, timber, and composites.								
ENT	CE	CE	4001	Societal Concerns in Civil Engineering	Lecture	4	0	1JE	N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (ENG 1510 or 1610) and (Jr or Sr)								
		COURSE DESC:		The course covers global/societal issues, engineering economics, statistics, ethics, and professionalism, as related to the civil engineering field. Emphases are placed on the preparation of economic justification reports, statistical analysis reporting, conclusion development, and ethical position statements.								
ENT	CE	CE	4100	Applied Boundary Surveying	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2100								
		COURSE DESC:		Triangulation, astronomical observations, land surveying, instrument adjustments, and special topics.								
ENT	CE	CE	4110	Legal Principles in Boundary Location	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2100								
		COURSE DESC:		In this course, the students learn the legal principles in determination of boundary locations and the role of evidence in that determination. The students also learn procedures for weighing conflicting forms of evidence and guidelines for evaluation.								
ENT	CE	CE	4150	Geodetic Surveying	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2100								
		COURSE DESC:		Astronomical observations and methods used in GPS and photogrammetry to establish horizontal and vertical control for objects.								
ENT	CE	CE	4160	Construction Estimating & Equipment	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2160								
		COURSE DESC:		Covers the fundamentals of construction equipment economics and productivity including: the selection of earth moving equipment and construction equipment fleet analysis. Addresses the fundamentals of cost estimating process including: contracts, bond, overhead, labor, pricing of excavation, pricing of concrete, pricing of metals, and pricing of wood.								
ENT	CE	CE	4170	Construction Planning and Scheduling	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2160								
		COURSE DESC:		Techniques and applications of all aspects of the construction scheduling process; including background on scheduling construction projects, development of work breakdown structures, and transition to element of the construction project schedule; linear scheduling methods for heavy construction, use of real-world examples in civil engineering, and applications using Primavera Project Planner.								
ENT	CE	CE	4190	Project Development, Contracts, and Law	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2160								
		COURSE DESC:		Provides students with the fundamentals of construction law and contracts. Topics covered include: types of construction contracts, contract changes, claim, liability, and dispute resolution. Aspects of construction administration including project funding, project cash flow, accounting systems, depreciation, and analysis of financial statements.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: This class covers the fundamental concepts, principles of structural modeling, and computer-aided structural design. In this class, each student gains many hours of practical modeling experience using a powerful finite element package widely used by structural engineers. The class first starts with modeling of the common structural components under a variety of loading conditions. Then, the class addresses issues such as how to interpret the model analysis results and how to make design choices. Experiences gained with the software package used should transfer easily to any other structural analysis software package.								
ENT	CE	CE	5400	Deterministic Approaches in Water Resources	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: CE 3420 Flood routing and overland-flow theory. Parametric hydrology, linear and nonlinear analysis of rainfall-runoff systems, unit and instantaneous unit hydrograph. Conceptual models for hydrologic watershed.								
ENT	CE	CE	5410	Stochastic Hydrology	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: CE 3420 Probability distributions applicable to hydrologic events; analysis of extremes, floods, and droughts; statistical associations between hydrologic variables. Analysis of hydrologic time series. Spectral and parametric formulation of stochastic models of precipitation, runoff, precipitation-runoff transfer.								
ENT	CE	CE	5420	Applied Hydraulics & Hydrology	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: Flow and pressure distribution in multi-loop networks, dynamics of flow in pumps and turbines, uniform and nonuniform flow in open channels, culvert hydraulics, hydrologic cycle, groundwater flow, surface flows, and water storage.								
ENT	CE	CE	5430	Open Channel Hydraulics	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: Principles of uniform and varied flow. Channel design for uniform flow, gradually varied flow profiles, channel transitions, hydraulic jumps, flow in prismatic and nonprismatic channels.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	CE 5200						
		COURSE DESC:		Development of elements from variational principles; application of finite element methods in static and dynamic continuum problems; computational techniques; and interpretation of results.								
ENT	CE	CE	6310	Structural Reliability	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		First-order, second-moment reliability method, Monte Carlo simulation, load and resistance factors, reliability index, and code checking.								
ENT	CE	CE	6320	Structural Dynamics	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Dynamic analysis of structures with multi-degree of freedom. Free and forced vibration analysis of elastic beams, frames, grids, and trusses. Earthquake and wind-induced vibration of high-rise buildings and bridges. Classical and computer methods.								
ENT	CE	CE	6330	Earthquake Engineering	Lecture	3	0		I	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Permission required						
		COURSE DESC:		Nature of earthquakes, measurement of earthquake motions, effects on soils and structures, and earthquake-resistant design.								
ENT	CE	CE	6340	Bridge Engineering	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Types of bridge structures, LRFD design standard specifications, loads, structural analysis, and design.								
ENT	CE	CE	6345	Bridge Design	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	CE 6340						
		COURSE DESC:		Analysis and design of bridges using various materials in accordance with AASHTO specifications.								
ENT	CE	CE	6500	Chemical Fate and Transport in the Environment	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Physical processes controlling the fate and transport of pollutants in surface water soils. Processes studied include advection, diffusion, sorption, Henry's law, and abiotic transformations. Governing mathematical equations will be derived and several modeling packages utilized.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 6550 and 6560								
		COURSE DESC:		Characterization of waste sludge from primary, chemical, and biological treatment; and design of sludge treatment processes.								
ENT	CE	CE	7520	Industrial Waste Treatment	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 6550 and 6560								
		COURSE DESC:		This comprehensive course addresses all of the important aspects of industrial waste treatment, including -- 1) environmental regulations; 2) classification, characterization, and study of industrial wastes by industrial category; 3) selection and combination of unit processes/operations for treatment; and 4) case studies.								
ENT	CE	CE	7530	Biodegradation and Bioremediation	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 6500								
		COURSE DESC:		The major biochemical pathways that are significant in the microbial conversion of xenobiotic compounds to common metabolic intermediates. Interpretation of quantification of biodegradation reactions and investigation of various physiochemical and environmental factors that impact biodegradation reactions.								
ENT	CE	CE	7570	Subsurface Remediation	Lecture	3	0		I	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Permission required								
		COURSE DESC:		Engineering design of systems to clean up contaminated soil and water above and below the water table. Physical, biological, and chemical methods. Emphasis on state-of-the-art technologies and most appropriate technology for a given site.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CS 3610 and 3560								
		COURSE DESC:		This course is intended to serve as an elective for upper-level undergraduate students in computer science and electrical engineering, and for graduate students in computer science, and electrical engineering. It covers selected up-to-date topics in computer security, including defining threats to computer and network systems, evaluating the relative risks of these threats, and the development of cost-effective countermeasures.								
				The course discusses basic principles that appear repeatedly as themes, including those related to authentication and access control, particularly in the context of operating systems and other computing applications. Different approaches to meeting computer security requirements, as well as increasingly important security standards are covered. This course has a special focus on low-level fundamentals of the Security Discipline such as the mathematical basis for Cryptography. This is accompanied by a series of real-world applications and hands on programming assignments.

The description of the formal properties of the algorithms are supplemented with motivating applications in a wide range of areas including natural language processing, computer vision, bioinformatics, and music analysis.								
ENT	EECS	CS	5900	Special Topics in Computer Science	Lecture	1 to 4	8		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: Special project in one of various subfields of computer science or application area studied, investigated, and/or solved by individual student or small group working in close relationship with instructor. Suitable problems might include construction of compiler for a special purpose language, perfection of software to solve some significant problem, or the study of coherent subfield of computer science. May be repeated for credit.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Prepares students to perform research in the field of bioinformatics. Reviews computer science research literature that pertains to bioinformatics to assist in the discovery of important unsolved bioinformatics problems that require basic research in computer science. Examines the research processes that are used in the field of bioinformatics. Writing-intensive course, requiring learning how to write, evaluate and review scholarly articles.								
ENT	EECS	CS	6250	Computer Graphics and Visualization	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Comprehensive study of the principles of computer graphics and visualization. Course topics include geometric transformations, representing shape, lighting properties, data representation, and visualization algorithms. Projects involve designing programs to visualize complex data in 2,3 and higher dimensions.								
ENT	EECS	CS	6410	Medical Image Analysis	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Fundamentals of medical image processing and analysis. Image data acquisition from CT, MR, PET, SPECT, and ultrasound devices. Image segmentation, registration, and visualization.								
ENT	EECS	CS	6420	Artificial Intelligence in Medicine	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Artificial intelligence (AI) approaches for medical decision making and clinical support, including knowledge-based systems, Bayesian reasoning, and data mining. Medical applications of AI, including diagnosis, therapy selection, patient monitoring and patient education.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	CS 5560							
				How software specifications are expressed and used. Emphasis on formal specifications and use of formal specifications in software verification and validation. Important formal specification models, including algebraic and axiomatic models, state/transition-based models, and temporal logic models, along with their related analysis techniques explored.								
ENT	EECS	CS	6572	Software Design	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	CS 6571							
				Advanced object oriented modeling studied. Teaches how to employ the Unified Modeling Language (UML) for advanced structural modeling, advanced behavioral modeling, and architectural modeling of software systems. Advanced structural modeling involves software components and their relationships. Concepts taught in advanced behavioral modeling pertain to hierarchical representations of external environment dependencies and interactions as well as concurrency. Also covers architectural modeling, including design patterns, collaborations, and deployment diagrams.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	CS 6571							
				Provides the skills necessary for successful management of software engineering projects. Examines technical management techniques as well as interpersonal communication concepts. Principles taught applied to a software engineering program.								
ENT	EECS	CS	6800	Advanced Topics in Artificial Intelligence	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Advanced topics in artificial intelligence (AI) studied. Concepts of heuristic search and knowledge representation studied in detail to provide a firm grounding in AI. Then an advanced topic studied, such as machine learning, natural language understanding, computer vision, and/or reasoning under uncertainty. Emphasis is to illustrate that representation and search are fundamental issues in all aspects of artificial intelligence.								
ENT	EECS	CS	6820	Artificial Intelligence: Case-Based Reasoning	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	CS 5800							
				Case-based reasoning (CBR) is an artificial intelligence (AI) paradigm, in which new problems are solved by reusing the solutions to previously encountered problems. Enables students familiar with AI problem solving techniques to explore CBR in depth. Featured will be: overview of fundamentals; discussion of research projects; CBR system implementation; and student presentations.								
ENT	EECS	CS	6830	Machine Learning	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Machine Learning is concerned with the design and analysis of algorithms that enable computers to automatically find patterns in the data. This introductory course will give an overview of the main concepts, techniques and algorithms that are relevant for the theory and practice of machine learning. The course will cover the fundamental topics of classification, regression and clustering, starting with simple learning models such as perceptrons, decision trees and logistic regression, and ending with more advanced models including Support Vector Machines, Conditional Random Fields and Bayesian networks. The description of the formal properties of the algorithms will be supplemented with motivating applications in a wide range of areas including natural language processing, computer vision, bioinformatics and music analysis.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Natural Language Processing (NLP) is a branch of Artificial Intelligence that focuses on the design of computer systems for processing, understanding, or communicating in natural language. This graduate level course covers statistical and machine learning approaches for solving fundamental tasks in NLP, such as language modeling, part of speech tagging, syntactic parsing, word sense disambiguation, semantic role labeling, coreference resolution, and semantic parsing. Students will also learn about major applications of NLP, including information retrieval and web search, information extraction, question answering, machine translation, sentiment analysis, text mining, and speech recognition.								
ENT	EECS	CS	6850	Image Understanding	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Comprehensive study of image understanding and computer vision techniques. Topics include low-level image analysis methods, image formation, camera calibration, edge detections, feature detection, region segmentation, color image segmentation, techniques for inferring three dimensional information from 2D images, and three dimensional object modeling and recognition.								
ENT	EECS	CS	6860	Information Retrieval and Web Search	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		This course covers the design, implementation, and evaluation of modern information retrieval (IR) systems, such as Web search engines. The course focuses on the underlying retrieval models, algorithms, and system implementations, such as vector-space and probabilistic retrieval models, as well as the PageRank algorithm used by Google. The course also covers more advanced topics in information retrieval, including document categorization and clustering, recommender systems, collaborative filtering, and personalized search.								
ENT	EECS	CS	6890	Deep Learning	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	CS 6830 or permission						
		COURSE DESC:		This course will introduce the multi-layer perceptron, a common deep learning architecture, and its gradient-based training through the backpropagation algorithm. Fully connected neural networks will be followed by more specialized neural network architectures such as convolutional neural networks (for images), recurrent neural networks (for sequences), and memory-augmented neural networks. The later part of the course will explore more advanced topics, such as generative adversarial networks and deep reinforcement learning. The lectures will cover theoretical aspects of deep learning models, whereas homework assignments will give students the opportunity to build and experiment with shallow and deep learning models, for which skeleton code will be provided.

		COURSE DESC:		C or better in (CTCH 1600 or 1891) Focuses on the design, installation, configuration, and management of a computer network. Also covers emerging technologies for network infrastructure and development.								
ENT	EECS	CTCH	2660	Wireless Systems	Lecture	3	0		N	U20		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		CTCH 1600 or 1891 Comprehensive overview of technologies, security, and best practices of wireless systems with current industrial standards such as IEEE802.11a, b, g, and n. Provides guidelines to plan, design, install, and configure wireless LANs. Wireless system security emphasized.								
ENT	EECS	CTCH	2670	Introduction to Cloud Computing	Lecture	3	0		N	U20		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		C or better in CTCH 1600 or 1891 This course explores the fundamental concepts of cloud computing and how it differs from past information technology models. Cloud computing data storage, virtual servers, networks, and databases are covered. Other topics include security, load balancing, and auto scaling. Students access cloud based service providers and develop new skills by working with new or improved technologies.

				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 321 or 3223								
				COURSE DESC: Introduction to fundamentals of the light propagation in solid media, passive devices like waveguides and optical fiber. Introduction to important modern active optoelectronic devices. Emphasizes basic physical theory needed to understand LEDs, laser diodes, photodetectors, photovoltaics and their construction and applications.								
ENT	EECS	EE	4323	Solar Cell and Photovoltaics	Lecture	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3343								
				COURSE DESC: Students in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; characteristics and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with the emphasis on physical concepts and applications.								
ENT	EECS	EE	4403	Antenna and Microwave Theory	Lecture	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3214								
				COURSE DESC: Fundamental concepts and definitions for radiating systems including parameters, current distributions, matching, polarization and their effect on antenna performance. Transmission links, linear wire, loop, aperture, and array antennas discussed.

				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3613								
				COURSE DESC: Emphasis on the design of advanced architectural concepts for multicores; performance trade-offs for multicores, advanced pipelining, superscalar and dynamic scheduling, limits of instruction level parallelism, multithreading and multicores, multi-level caching, virtual memory, I/O fundamentals and techniques, classification of parallel machines, shared memory multiprocessors, cache coherence, interconnection networks and clusters. Term paper/project involving computer hardware design and system simulation required.								
ENT	EECS	EE	4713	Communication Engineering	Lecture	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3334								
				COURSE DESC: Fundamentals of communication system engineering, at the physical layer. Resources available for communication system design. Probability and stochastic processes for communication systems, including noise. Analog communication systems and their performance. Baseband digital communications, carrier modulated digital communications. Basic link budget analysis.								
ENT	EECS	EE	4773	Foundations of Hardware Security	Laboratory	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3954								
				COURSE DESC: The course covers basic concepts in hardware security, which is different from software, network and systems security. Lab sessions give students hands on experience with performing attacks, developing countermeasures, and implementing secure hardware building blocks. Students are expected to have basic knowledge of digital logic and Register-Transfer Level (RTL) design, but no specific background in security/cryptography is necessary. Contemporary issues including recent research in hardware security are discussed.

Conveys a knowledge of advanced concepts of analog circuit simulation and design techniques. Emphasis on topics related to numerical analysis methods useful for the analog and mixed signal designs. General formulation techniques, sensitivity analysis, large change sensitivities, numerical Laplace transform inversion, solution of nonlinear networks, and circuit optimization discussed. Computer assignments completed using any computer language (C++, Pascal, Fortran) or simulation tool MATLAB®, MathCad, Mathematica).	Lecture	3	0		N	G50		0
ENT	EECS	EE	6173	Fault Testable Design GEC1: A-F REQUISITE: EE 5143 Basic concepts of reliability. Physical faults and testing. Test generation for combinational and sequential logic circuits, random testing, and signature analysis. Fault tolerance and circuit redundancy, self testing and fail-safe design, fault tolerant VLSI design, practical fault tolerant systems. Self testing, design for testability, built-in test, boundary scan testing, IEEE standards.	Lecture	3	0		N	G50		0
ENT	EECS	EE	6183	Nanoelectronic Devices and Applications GEC1: A-F REQUISITE: EE 5183 and familiarity with the introductory level semiconductor devices course is useful for all students. Introduces fundamental and advanced concepts required for the understanding of electronic and ionic transport in micro and nanoscale devices. Reviews theory elements such as effective mass, band structure, electrostatics, screening, low and high-field transport, and scattering. Explores novel design tools and numerical techniques used for simulation of practical devices. Examines more closely the structure, operation, design principles, advantages and disadvantages, applications and future prospects for a wide range of traditional (diodes, MOSFETs, bipolar transistors etc.) and advanced (MODFETs, HBTs, nanowire and nanotube transistors, single-electron transistors, memristors, graphene devices, plasmonic devices, bio-molecular devices). On an orthogonal direction, surveys a number of critical technology fronts that many of devices reviewed may play an important role (ultra-low or high-power applications, high-performance solar devices, flexible electronics, THz devices and bio-nano sensors).	Lecture	3	0		N	G50		0
ENT	EECS	EE	6233	Nonlinear System Analysis I GEC1: A-F REQUISITE: Introduction to nonlinear dynamical systems analysis: nonlinear dynamical system models, second-order nonlinear behaviors by phase plane analysis, including multiple equilibria, qualitative behaviors near equilibrium points, limit cycles and bifurcation; demonstration of chaotic behaviors by simulation; existence, uniqueness and sensitivity of solutions; Lyapunov stability and its assessment; input-output stability.	Lecture	3	0		N	G50		0
ENT	EECS	EE	6283	State-Space Methods in Control GEC1: A-F REQUISITE: Introduction to state-space methods for control system analysis and design. Topics include basic state-space concepts, writing state equations, solution of the state equation and the matrix exponential, relations to transfer functions, controllability and observability, stability, state-space methods of design including state feedback, state estimation, servomechanisms and an introduction to optimal control.	Lecture	3	0		N	G50		0
ENT	EECS	EE	6323	Integrated optics and passive photonic devices in integrated technologies. GEC1: A-F REQUISITE: Students taking this course must have had undergraduate courses in electromagnetic wave theory, differential equations, and vector calculus. This course is designed as an introduction to the basic elements of passive integrated optical devices. In the first part, we focus on the development of optical waveguides and investigate the utilization of these structures in passive photonic circuits. Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using Matlab throughout the course. In the second part of the course, we extend this analysis to specific devices and practical applications. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light detectors are presented, focusing on the theory of light-matter interaction and operation of various light detection systems. The detection of light is presented with an analysis of sensors as integrated detectors. Finally, recent progresses in integrated optics and novel concepts are studied to motivate research in these areas.	Lecture	3	0		N	G50		0
ENT	EECS	EE	6333	Integrated Optoelectronics and Photonics GEC1: A-F REQUISITE: EE 5313 Course focuses on the underlying physics and engineering behind devices that drive today's optoelectronics technology. In this course students study important details of structural properties, band structure, electrical transport, and optical and magnetic properties of contemporary semiconductor structures. Effects of dimensional physics and strain, two important driving forces in modern technology, will be emphasized and discussed in the light of layered structures. Furthermore, students will have an opportunity to focus on selected topics including: elected advanced concepts in semiconductor band structure, energy transfer, defects, impurities/doping, spontaneous material polarization, electro-optic and magneto-optic effects. These are the key modern semiconductor concepts relevant to active novel optoelectronic devices. The course will have a format of recitation and discussion. Students will be required to use programming tools to solve more mathematically complex problems.	Lecture	3	0		N	G50		0
ENT	EECS	EE	6343	Modern Optical Materials and Devices GEC1: A-F REQUISITE: EE 6333 Provides introduction and overview of modern materials used in optics and optoelectronics including semiconductors and meta-materials. Topics extend from materials science to engineering of optoelectronic and photonic devices. Emphasis on understanding fundamentals relevant to applications in integrated optical systems combining optical emission and detection from the IR through the visible to the UV, linear and nonlinear optical phenomena, dynamics of optical processes, magneto- and electro- optics, high-excitation effects. Well established photonic and optoelectronic devices, plus novel device approaches based on the latest technological developments explored.	Lecture	3	0		N	G50		0

ENT	EECS	EE	7183	Reinforcement Learning	Lecture	3	0		N	G50		0
				ELIGIBLE GRADES: GEC1: A-F	REQUISITE:							
				COURSE DESC: This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence.								
				"Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward---are the two most important distinguishing features of reinforcement learning."								
				This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time?								
ENT	EECS	EE	7213	Cognitive Neuroscience and Embodied Intelligence	Laboratory	4	0		N	G50		0
				ELIGIBLE GRADES: GEC1: A-F	REQUISITE:							
				COURSE DESC: This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible.								
				The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined.								
				Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment.

ENT	EECS	EE	7733	Time Frequency Analysis and Wavelet Signal Processing and Applications GEC1: A-F REQUISITE: EE 6713 COURSE DESC: Good knowledge of Fourier transforms, properties, basic DSP: sampling, DTFT, and discrete time filtering (grad DSP course EE6713) required. Structured to cover two areas: the broad area of time-frequency (TF) analysis, and the focused application of wavelets to various signal processing tasks. In TF analysis, covers the fundamental need for this type of analysis, the uncertainty principle, densities, characteristic functions, and mathematical representations, the short-time Fourier transform and Spectrogram, the Wigner distribution, other TF distributions, and some TF distribution construction methods. Various examples will be used to illustrate the power and challenges of TF analysis. In the wavelet section, connects TF analysis to the use of wavelets, and covers multiresolution analysis, 1D and 2D compression of signals and images, noise reduction, and signal modulation. MATLAB Wavelet Toolbox used to implement, study, and visualize the operation of wavelet filter banks.	Lecture	3	0		N	G50		0
ENT	EECS	EE	7743	Mobile Communications GEC1: A-F REQUISITE: EE 6723 COURSE DESC: Introduction to mobile communication system design and analysis. Topics include representations for bandpass signals and systems, modeling of the mobile communication channel including both large scale path loss and multipath fading, signal set and receiver design for the mobile communication channel, characterization of interference, principles of coding and equalization, diversity techniques, performance over fading channels, access and mobility control, mobile network architectures and multiple access, and signaling protocols for mobile communication systems. Examples of mobile communication systems will be studied, including the latest generation cellular and mobile satellite systems.	Lecture	3	0		N	G50		0

This course explores the ways in which technology has shaped human society. It focuses on important themes, including the Industrial Revolution, infrastructure, and the historical relationship between technological experts (including engineers, technologists, and scientists), society, and the state. The course pays particular attention to technology's social and historical consequences; the human and environmental contexts of technological infrastructures; and historical debates over what constitutes an ethical model of technological innovation. It covers the historical and modern development of professions based on technology, including those requiring licensure. In this way, the course provides a critical perspective for an informed approach to technology and society in the modern world.

				COURSE DESC: Students will contribute their discipline specific knowledge and skills as part of a multidisciplinary team to meet the engineering needs of a community in a developing country. Specific areas of need could include water treatment and distribution, energy systems, light construction, sanitation, and small-scale industries. This course will focus on the project implementation. Students will be expected to travel to a developing country as part of an education abroad experience and coordinate the realization of a project sub-system. Students will also be expected to work as part of an intercultural team and to expand their knowledge of the host country's culture.

ENT	ENT	ET	5520	Appropriate Technology in Developing Countries GEC1: A-F REQUISITE: Appropriate technology can be roughly defined as technology that best suits the economic, social, environmental, and political as well as technological needs of the people employing it. It is apparent from this definition that the development and analysis of appropriate technologies requires the consideration of elements from multiple fields. For both technical and non-technical majors. Provide a synthesis experience through an introduction to appropriate technology in developing countries. 		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	MGT 2000 and Warning: No credit for this course if taken after the following: MGT 3000						
		COURSE DESC:		This course examines the aspects of technical operations management and how when applied effectively they can provide an organization with a product or service with higher quality and at a lower cost than their competition. Emphasis is on providing a conceptual understanding of the operations function, which includes: business measures, product/service design, capacity planning, facilities planning and layout, work system design, managing quality, materials planning and inventory control, supply chain management and automatic identification & data capture.								
				Operations is an essential function in all organizations, manufacturing or service, private or public, profit or non-profit. Technical operations managers work in factories, sports facilities, restaurants, banks, hospitals and clinics, airlines, etc. Operations are typically, by far, the largest segment of an organization with the largest budget, number of employees and square footage in the facility. All other departments in organizations interact with and are affected by Operations. For these reasons it is important to understand the operations functions.

		COURSE DESC:		REQUISITE:	EMGT 6100							
				Application of statistics to control of quality and reliability in products and services, including training in the Six Sigma DMAIC problem-solving methodology. Topics include: tools and techniques for statistically-based product and process improvement; design of acceptance sampling and process control systems, including attention to inspection and test methods; and design and implementation of quality assurance programs, including nonstatistical dimensions of quality systems.								
ENT	ISE	EMGT	6111	Advanced Six Sigma	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6110							
				This course is continuation of the EMGT 6110 - Six Sigma, and covers DMAIC problem-solving methodology in details. Topics covered include tools and techniques for product and process improvement and the application of basic and advanced statistics to problem solving. Emphasis on application of the methodology.								
ENT	ISE	EMGT	6112	Six Sigma Green Belt Exam	Lecture	.5	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6110							
				This course allows students to demonstrate proficiency in basic Six Sigma methods. Students review the provided materials and then take an exam.								
ENT	ISE	EMGT	6113	Six Sigma Black Belt Exam	Lecture	.5	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6111 and EMGT 6112							
				This course allows students to demonstrate proficiency in advanced Six Sigma methods. Students review the provided materials and then take an exam.								
ENT	ISE	EMGT	6114	Six Sigma Black Belt Project	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6111							
				This is the culminating experience of the Six Sigma Black Belt Certificate. Students apply the components of Six Sigma methodology taught in previous courses to demonstrate their ability to use the appropriate methods for process improvement.								
ENT	ISE	EMGT	6120	Quality Systems	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6100							
				Focuses on the concepts of total quality management including: philosophies and frameworks of quality management, incorporating quality into strategic planning, leadership, process measurement and management, continuous quality improvement, and ISO 9000. Original writings by major figures in the quality movement, such as Deming, Juran, Taguchi, etc. will be discussed.								
ENT	ISE	EMGT	6200	Information Systems Engineering	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				An introduction to applications of information systems industry and the design and implementation of these systems. Students will also learn systems modeling and how to utilize a Rapid Application Development tool to extract needed information from a database.								
ENT	ISE	EMGT	6210	Database Information Systems	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6200							
				Introduction to application and development of database systems in industrial engineering. In addition, students will learn database theory, data modeling and SQL.								
ENT	ISE	EMGT	6220	Data Acquisition and Predictive Analytics	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6100 and EMGT 6200; no credit if taken after MBA 6325							
				The objective of this course is to teach students modern methods for data analysis and predictive analytics. Students will gain the knowledge to develop advanced queries and apply statistical methods and machine learning to analyze the data and make predictions in the engineering management context.								
ENT	ISE	EMGT	6300	Project Management	Lecture	4	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:	EMGT 6000 or enrolled in MS7271 program							
				Modeling of project constraints using network methodologies such as CPM and PERT to determine activities critical to meeting a project deadline. Utilization of stochastic models to determine possible changes in the critical path. Will also cover methods for economic evaluation of project alternatives.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: EMGT 6000								
				The objective of this course is to teach students tools for applying lean thinking, lean principles and lean methods in manufacturing and service systems. Students will learn basic methods of the lean production, such as value-stream mapping, 5(6)-S, continuous flow, Kanban, SMED, A3, continuous improvement. The methods will be learned by practicing them in group discussions and in projects. Upon completion of the course, students will possess skills to apply lean methods in their working environments.								
ENT	ISE	EMGT	6600	Applied Accounting and Finance for Engineering Management	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: EMGT 6000								
				Principles and techniques of accounting, finance, performance measures and decision making are examined and applied in the engineering management context. Methods of cost accounting are presented, compared and used. Relationships between cost, volume and profit are illustrated, and related parameters are calculated. Budgets for production, direct labor, manufacturing and other functions are prepared. Performance measures are analyzed and applied. Differential analysis techniques are used to support engineering management decisions. Financial statements and statements of cash flows are examined and interpreted to assess the financial health of engineering organizations.

ENT	ISE	ISE	4310	Introduction to Systems Engineering	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Sr only								
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.								
ENT	ISE	ISE	4311	Applied Systems Engineering	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (ET 2400 or ET 2450) and (junior or senior)								
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 3200 or MATH 2500						
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.								
ENT	ISE	ISE	4320	Inventory and Manufacturing Control II	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 4120						
		COURSE DESC:		Discussion of more advanced inventory and manufacturing control methods. Topics include forecasting, inventory control, aggregate planning, materials requirements planning, capacity requirements planning, conversion to cells, just-in-time/kanban, scheduling procedures, and production-rate based scheduling. A kanban design project is required as part of the course.								
ENT	ISE	ISE	4325	Supply Chain Engineering	Lecture	3	0		N	U30		0

		COURSE DESC:		This course explores the key issues associated with the design and management of supply chains. Supply chains are the cornerstone of today's global economy and are concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time.								
ENT	ISE	ISE	4330	Cost Engineering	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ET 3300 and ISE 3200						
		COURSE DESC:		Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design.								
ENT	ISE	ISE	4335	Applications of Mathematical Programming	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 4140						
		COURSE DESC:		Formulation and solution of various mathematical programming models. Topics include linear programming, integer programming, and mixed-integer programming. Various solution algorithms will also be discussed.								
ENT	ISE	ISE	4345	Network Analysis	Lecture	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 4140						
		COURSE DESC:		Engineering project planning using such techniques as PERT and critical path method, resource allocation in project networks, shortest path models, spanning-tree problems, traveling salesman problems, maximum-flow problems, and other stochastic network models, such as GERT.								
ENT	ISE	ISE	4350	Database Information Systems	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 2100						
		COURSE DESC:		Introduction to application and development of database systems in industrial engineering. In addition, students will learn database theory, data modeling and SQL.								
ENT	ISE	ISE	4355	Introduction to Reliability Engineering	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ISE 3210						
		COURSE DESC:		Introduces students to fundamental reliability theory and applications. Reliability models, system reliability, reliability testing, and reliability data analysis are covered.								
ENT	ISE	ISE	4360	Facility Planning and Design	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ET 3300 and (ISE 3340 or ISE 3341)						
		COURSE DESC:		The process of designing and laying out a facility with an emphasis on manufacturing facilities. Consideration will also be given to other facilities, such as warehouses, and service-oriented facilities, such as hospitals. Issues addressed include selecting the type and quantity of production and handling equipment; alternatives for material flow; qualitative and quantitative methods for developing the facility layout; determining the appropriate size for the departments and the facility; and utilizing software as appropriate for determining the facility design.								
ENT	ISE	ISE	4365	Material Handling Systems Engineering	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ET 3300 and (ISE 3340 or ISE 3341)						
		COURSE DESC:		Provides a broad understanding of materials handling engineering from a system design and application engineering point of view. Instruction in the engineering principles, design criteria, operating parameters, performance requirements, equipment resources, and applications of engineering practices involved in the planning, design, and operation of materials handling systems for manufacturing facilities, distribution facilities, and service facilities. A materials handling system design project is a required part of the course.								
ENT	ISE	ISE	4370	Manufacturing Systems	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Sr only						
		COURSE DESC:		Applications of industrial and systems engineering techniques, principles, practices, and methodologies as they relate to the operation, analysis, management, planning, and design of manufacturing systems. A manufacturing system design project is required as part of the course.								
ENT	ISE	ISE	4375	Computer Integrated Manufacturing	Lecture	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ETM 3070						
		COURSE DESC:		Provides the students with an understanding of the fundamentals of computer integrated manufacturing. Several issues will be addressed, product design and tolerances, numerically controlled machines and programming, CAD/CAM integration, process engineering, and process planning. Students will learn how to apply these techniques as a part of the typical manufacturing engineering task. The emphasis will be on interactions and interdependencies between the covered techniques.

ENT	ISE	ISE	5310	Introduction to Systems Engineering	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.								
ENT	ISE	ISE	5311	Applied Systems Engineering	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.								
ENT	ISE	ISE	5315	Decision Theory	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.								
ENT	ISE	ISE	5320	Inventory and Manufacturing Control II	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Discussion of more advanced inventory and manufacturing control methods. Topics include forecasting, inventory control, aggregate planning, materials requirements planning, capacity requirements planning, conversion to cells, just-in-time/kanban, scheduling procedures, and production-rate based scheduling. A kanban design project is required as part of the course.								
ENT	ISE	ISE	5325	Supply Chain Engineering	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		This course explores the key issues associated with the design and management of supply chains. Supply chains are the cornerstone of today's global economy and are concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time.								
ENT	ISE	ISE	5330	Cost Engineering	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design.								
ENT	ISE	ISE	5335	Applications of Mathematical Programming	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Formulation and solution of various mathematical programming models. Topics include linear programming, integer programming, and mixed-integer programming. Various solution algorithms will also be discussed.								
ENT	ISE	ISE	5340	Work Design	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Design of work systems and measurement of work. Topics include job methods, operation analysis, charting techniques, stop-watch time study, work sampling, predetermined time systems, standard data, incentive wage systems, and learning curves. Students are also introduced to ergonomics considerations in the design of manual operations.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Design of work systems and measurement of work. Topics include operation analysis and improvement, charting techniques, stop-watch time study, work sampling, predetermined time systems, standard data, incentive wage systems, learning curves, balancing lines, assembly lines, task assignment to workers, robots in industry. Students are also introduced to ergonomics considerations in the design of manual operations. Models for optimization of operations (eg. line balancing models) will also be covered.								
ENT	ISE	ISE	5345	Network Analysis	Lecture	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Engineering project planning using such techniques as PERT and critical path method, resource allocation in project networks, shortest path models, spanning-tree problems, traveling salesman problems, maximum-flow problems, and other stochastic network models, such as GERT.								
ENT	ISE	ISE	5350	Database Information Systems	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Introduction to application and development of database systems in industrial engineering. In addition, students will learn database theory, data modeling and SQL.								
ENT	ISE	ISE	5355	Introduction to Reliability Engineering	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		Introduces students to fundamental reliability theory and applications. Reliability models, system reliability, reliability testing, and reliability data analysis are covered.

ENT	ISE	ISE	7090	Intelligent Engineering Systems	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				The objective is to enable the students to learn methods and techniques of artificial intelligence and enable them to apply these methods in building knowledge-based engineering systems. Students will learn fundamental AI techniques (such as space search and knowledge representation) and study several techniques for building knowledge-based systems in various domains. After successfully completing this course, the students will possess enough theoretical knowledge and programming experience for building intelligent systems in their engineering disciplines.								
ENT	ISE	ISE	7100	Genetic Algorithms in Manufacturing	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				Genetic algorithms are search algorithms based on the mechanics of natural selection and natural genetic operators such as crossover and mutation. Genetic algorithms and evolutionary computation concepts will be presented. Their application to engineering problems in manufacturing system design, scheduling, lot sizing, layout, constrained optimization, vehicle routing and other network problems will be emphasized. In addition, their connections to other artificial intelligence paradigms, such as genetic programming, fuzzy logic, and artificial immune system will be introduced.

				ISE 5120 Focus of this seminar is on case studies. It includes presentation of relevant case studies and literature followed by critique of the procedures used and the results obtained. Related research done within department included. Representatives of industry invited to present their control systems for critique.								
ENT	ISE	ISE	7325	Design and Control of Global Supply Chains	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				The course covers manufacturing system design, supplier selection and evaluation, purchasing, location of warehouses and manufacturing plants, forecasting, distribution networks, logistics, warehouse operations, vehicle routing. It includes math modeling, fuzzy math modeling, stochastic modeling and genetic algorithms as solution techniques. The course looks into competition and collaboration among in supply chains along with world trade relations, tariffs, and world economy as part of designing global supply chains. Basic control issues such as production planning, scheduling and inventory control is briefly covered in the course.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course will focus on analytical solutions to linear Partial Differential Equations (PDEs), with an emphasis on applications of PDEs in Engineering problems. The goal is to impart to students the excitement and usefulness of mathematics as a tool in solving real-world problems. The approach will be to look at the mathematical modeling & solution of simplified Engineering problems. The course is intended to act as a foundation course for engineering graduate students coming from a range of backgrounds, but with previous exposure to multi-variable calculus and linear constant coefficient ordinary differential equations.								
ENT	ME	ME	6570	Introduction to Finite Element Methods	Lecture	3	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		Examines the theory, derivation, and computer implementation of finite element methods for solution of boundary value problems. Study examples from heat conduction, solid mechanics, and vibration in one-, two-, and three-dimensional geometries. This fundamental approach will give users of finite element packages a deep understanding of both the power and limitations of FE techniques as well as providing a background to accurately use FE models. It will also provide a base for more advanced users to modify existing or write their own FE code. Use a programming language such as C or Matlab.

				This course is typically partnered with an exhibition and is geared in part toward students preparing material for the exhibition and learning about the objects in the exhibition.								
				For readings, the class focuses on global museums, exhibitions, and politics of display through contemporary critical museology. The treatment and recontextualization of international art in the museum world both in the U.S. and abroad are analyzed. Also considered are questions around global design, the quotidian, built form, and exhibitionary practice. The objective of the course is to study artworks in exhibitions within the Western museum, political histories of conflict, cultural specificity, and indigenous world views.

FAR	ART	AH	3610	History of Photography ELIGIBLE GRADES: GEC1: A-F REQUISITE: Jr or Sr COURSE DESC: Approaches photography as a set of problems and concepts rather than as a unified medium with a linear history. Photography is marked by multiple, often contradictory practices at the nexus of differing discursive and contextual parameters. As a result, the main interest is not only with the photograph as an object of study, but as a modality of thinking and a way of producing new models of visibility. We will investigate the criteria used to identify and discuss photographic images and practices over the century and a half since the inception of processes resulting in photographic material. At the same time, we will ask after the ways in which photographic practices elucidate aspects of the historical context from which they are drawn.	Lecture	3	0		N	U30		0

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Jr or Sr						
		COURSE DESC:		This course explores the relationship between visual art and spatial modes of display, installation, collection, and exhibition. Using historical case studies, we question the white-wall gallery as the primary home of fine art, finding instead a rich history of alternative spaces and presentation techniques. Selected case studies include: cabinets of curiosities, salons, modern galleries, museums (art, science, natural history), department stores, archives, cities, gardens, fairs, and various mediated spaces (pictorial, electronic, virtual). This class considers how spatial conditions factor into the production and reception of art, visual culture, and media.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:								
		COURSE DESC:		This course is typically partnered with an exhibition and is geared in part toward students preparing material for the exhibition and learning about the objects in the exhibition.								
				For readings, the class focuses on global museums, exhibitions, and politics of display through contemporary critical museology. The treatment and recontextualization of international art in the museum world both in the U.S. and abroad are analyzed. Also considered are questions around global design, the quotidian, built form, and exhibitionary practice. The objective of the course is to study artworks in exhibitions within the Western museum, political histories of conflict, cultural specificity, and indigenous world views.

FAR	ART	AH	5610	History of Photography	Lecture	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC2: A-F,	REQUISITE:							
		COURSE DESC:		PR	Approaches photography as a set of problems and concepts rather than as a unified medium with a linear history. Photography is marked by multiple, often contradictory practices at the nexus of differing discursive and contextual parameters. As a result, the main interest is not only with the photograph as an object of study, but as a modality of thinking and a way of producing new models of visibility. We will investigate the criteria used to identify and discuss photographic images and practices over the century and a half since the inception of processes resulting in photographic material. At the same time, we will ask after the ways in which photographic practices elucidate aspects of the historical context from which they are drawn.

		COURSE DESC:		REQUISITE: Photography is a tool to document our existence. Photos say, "this is me, my body, my family, my home, my experiences. Let me record and remember. Let me share. Here I am." This is part of what makes up an album--a photographic record of looking, sharing, and remembering--made from close members in our community, our family. This class focuses on the power of the photograph to share the personal. This class engages in reflective writing and creative sharing based on vernacular images and their uses in art and culture.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:							
		COURSE DESC:		Design fundamentals, design history, and aesthetics serve as the course starting point. Building upon these rudiments, this course introduces Environment and Behavior Studies (EBS), the area of research investigating how people, across cultures and the lifespan, interact with the environment. With an understanding of EBS, design strategies such as sustainable and therapeutic design may be used as evidence-based tools to design for optimal life quality. By providing appropriate analytical tools and practice using those tools, this course enhances understanding of how designed environments impact human physiological, informational, and social needs.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	Fr or Soph						
		COURSE DESC:		Introduction to Interior Architecture Studio is first in the IA studio series. Students focus on interior form and color as well as the strategies required to create supportive interior environments that are responsive to human needs. Additionally, this course introduces design process and programming which includes design concept development, ideation, and space planning. With this, design presentation layout skills are developed. Concept statements, project statements, adjacency diagrams, and scaled drawings are used as tools to help students analyze and develop a program in response to a design problem.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ART 1200 and 1210 and 1220 and 1230 and 1240								
		COURSE DESC:		An introduction to hand building techniques in clay. Includes diverse surface techniques, slips, glazes, and kiln firing. The semester builds to address more advanced techniques such as basic mold making, conceptual problem solving through material and contemporary and non-traditional approaches to ceramics.								
FAR	ART	ART	2220	Ceramics Wheel Throwing	Lecture	4	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ART 1200 and 1210 and 1220 and 1230 and 1240								
		COURSE DESC:		Explores the creative possibilities of the potter's wheel. Emphasis will initially be placed on functional objects, building a variety of skills that can lead to individual interpretations, both functional and sculptural. Students will become familiar with clay and glaze materials, surface application with slips and glazes, kiln design, and firing processes.

		COURSE DESC:		REQUISITE:								
				As a result of globalization, studying cross-cultural design provides a framework of visual culture that emphasizes the role of design in diverse communication exchanges and public discourse. Particularly important is that a history of design transcends mere exposure to various traditions of design. Instead, a critical discussion of design in various contexts is encouraged as a way to understand our own cultural patterns of design among a broader history. An inclusive classification of design will be used to track significant developments in design across technological, physical and social contexts.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (Soph or Jr or Sr) and Interior Architecture Major								
		COURSE DESC:		An introduction to design process and programming as related to the development of interior design and application within the planning and shaping of interior architecture. Students begin with a design problem, and see it through the various phases of research, programming, ideation, implementation and final analysis in design process thinking. For Interior Architecture programming addresses more specifically space planning and analysis of space to meet client needs. Concept statements, project statements, adjacency studies and diagrams are used as tools to help students analyze and develop a program in response to a given problem. Human dimensions, physiological and psychological aspects of the environment are studied as well as issues related to sustainable design, code issues, and ergonomic concerns are addressed.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ART 1200 and 1210 and 1220 and 1230 and 1240								
		COURSE DESC:		Covers fundamental technical and conceptual issues of traditional analog photography. Skills covered include camera operation, film processing, printing, and principles of composition. In addition, slide lectures address pertinent issues in the history and current practice of photography. Through a combination of lectures, critiques, and workshops students learn the fundamentals of traditional silver printing as well as basic camera controls and other skills essential to future work in photography. Both black and white and color processes are examined.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: PSY 1010								
		COURSE DESC:		This course utilizes an interactive lecture and experiential approach to build an understanding of the history, theories, principles, and practices of contemporary art therapy. Students explore how psychology and psychotherapy intersect with the creative process. Using both art produced from classwork as well as from other sources, students learn and practice how to explore artwork non-judgmentally in a manner that promotes an increase of self-awareness, health and well-being, and the concrete experience of change. Additionally, students study the range and uses of art therapy in a variety of community as well as clinical settings.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ART 2810 and Jr or Sr						
		COURSE DESC:		This course provides an introduction to view camera operation and the basics of studio lighting. Students build on the fundamental technical skills and conceptual issues of analog black and white photography covered in ART 2810, with a special focus on refining darkroom skills and large scale printing. Through an introduction to its history and contemporary practitioners, students engage in dialogue about the aesthetic and conceptual potentials of film-based photography. In addition to skill building, there is an emphasis on the fundamental questions of why and how artists use these tools within the larger context of contemporary art. Class time is devoted to demonstrations, lab periods, presentations, discussions and critiques.

				This studio-based course provides opportunities for graduate students to synthesize and apply community dance theory and practice with undergraduates and community members. Graduate students in this course are both participants and facilitators as they identify potential community partners, and lead dance sessions with people of varying ages and abilities. Students discuss concerns and challenges with implementation of dance experiences and identify resources that support stewardship of community dance. Students have the opportunity for independent investigation of a question, challenge, or project related to their interests and investigations of how theory is connecting to the studio-based experience. A substantial portion of the final grade comes from this independent investigation and final presentation of the work.

		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE:								
				This course explores the teaching and learning of dance. Dance pedagogy is considered through artistic, personal, cultural, and interdisciplinary connections as well as how individuals identify, understand, and express themselves. Students evaluate and apply various teaching methods, assessment and evaluation practices, and culturally relevant pedagogy. Best practices in the skills of creating, responding, and connecting are studied in order to meet learners on a continuum of knowledge. Dance education is further considered within community dance contexts.

FAR	IART	IART	5401	World Aesthetic Ideas	Seminar	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F								
		COURSE DESC:		REQUISITE: The seminar explores the musical-aesthetic thought outside the Western world, from ancient sources to contemporary debates. The readings include mythological, religious, literary, and philosophical texts, both traditional and modern. The areas of musical creativity that will be discussed comprise classical traditions and popular genres, including the uses of music in mass entertainment, ideological propaganda, and devotional practices. Literary, visual, and video materials will help illustrate the attitudes towards music in these cultures. In addition, the seminar will pursue a methodological theme of considerable urgency: Do the existing historical and contemporary approaches do justice to the uniqueness and complexity of music-philosophical theorizing in the cultures of, for example, India, China, or Bali? What kind of an approach would allow us to avoid the pitfalls of comparativism, Orientalism, and distorting biases in general? What kind of a philosophical perspective can assure at once a meaningful multilateral dialogue among world musical cultures, and their resistance to the levelling effects of globalization? A variety of texts, both by authors from a relevant cultural tradition and by Euro-American commentators, will serve as a platform for addressing these questions.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ANTH 1010 and Sr						
		COURSE DESC:		This course is intended to give students an overview of the two contributing cultures and their musics found in this country, from the songs of rural Appalachia and New England to the African music brought by the slaves; to the musics that grew out of those traditions, from the popular musics of the cities to the songs of Latin Americans and European minorities. We will trace the way these musics live in the modern city, in the academic world and in contemporary music society. (Nettl, 1976) The student will be introduced to the study of music as a manifestation of human need and a representation of culture. The course uses music as an index to understand American culture while it introduces the student to various concepts in the field of ethnomusicology. (Nettl, 1976)
