ENT	EECS	EE	6183	<b>Nanoelectronic Devices and Applications</b> GEC1: A-F REQUISITE: EE 5183 and familiarity with the introductory level semiconductor devices course is useful for all students. Introduces fundamental and advanced concepts required for the understanding of electronic and ionic transport in micro and nanoscale devices. Reviews theory elements such as effective mass, band structure, electrostatics, screening, low and high-field transport, and scattering. Explores novel design tools and numerical techniques used for simulation of practical devices. Examines more closely the structure, operation, design principles, advantages and disadvantages, applications and future prospects for a wide range of traditional (diodes, MOSFETs, bipolar transistors etc.) and advanced (MODFETs, HBTs, nanowire and nanotube transistors, single-electron transistors, memristors, graphene devices, plasmonic devices, bio-molecular devices). On an orthogonal direction, surveys a number of critical technology fronts that many of devices reviewed may play an important role (ultra-low or high-power applications, high-performance solar devices, flexible electronics, THz devices and bio-nano sensors). ENT	EECS	EE	6323	<b>Integrated optics and passive photonic devices in integrated technologies.</b> GEC1: A-F REQUISITE: Students taking this course must have had undergraduate courses in electromagnetic wave theory, differential equations, and vector calculus. This course is designed as an introduction to the basic elements of passive integrated optical devices. In the first part, we focus on the development of optical waveguides and investigate the utilization of these structures in passive photonic circuits. Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using Matlab throughout the course. In the second part of the course, we extend this analysis to specific devices and practical applications. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light detectors are presented, focusing on the theory of light-matter interaction and operation of various light detection systems. The detection of light is presented with an analysis of sensors as integrated detectors. Finally, recent progresses in integrated optics and novel concepts are studied to motivate research in these areas.	LEC	LE	3	0		N	G50		0

				GEC1: A-F REQUISITE: EE 5313 Course focuses on the underlying physics and engineering behind devices that drive today's optoelectronics technology. In this course students study important details of structural properties, band structure, electrical transport, and optical and magnetic properties of contemporary semiconductor structures. Effects of dimensional physics and strain, two important driving forces in modern technology, will be emphasized and discussed in the light of layered structures. Furthermore, students will have an opportunity to focus on selected topics including: elected advanced concepts in semiconductor band structure, energy transfer, defects, impurities/doping, spontaneous material polarization, electro-optic and magneto-optic effects. These are the key modern semiconductor concepts relevant to active novel optoelectronic devices. The course will have a format of recitation and discussion. Students will be required to use programming tools to solve more mathematically complex problems.									
ENT	EECS	EE	6343	<b>Modern Optical Materials and Devices</b> ELIGIBLE GRADES: COURSE DESC:	LEC	LE	3	0		N	G50		0
				GEC1: A-F REQUISITE: EE 6333 Provides introduction and overview of modern materials used in optics and optoelectronics including semiconductors and meta-materials. Topics extend from materials science to engineering of optoelectronic and photonic devices. Emphasis on understanding fundamentals relevant to applications in integrated optical systems combining optical emission and detection from the IR through the visible to the UV, linear and nonlinear optical phenomena, dynamics of optical processes, magneto- and electro- optics, high-excitation effects. Well established photonic and optoelectronic devices, plus novel device approaches based on the latest technological developments explored.

ENT	EECS	EE	6663	<b>Pattern Recognition</b> ELIGIBLE GRADES: COURSE DESC:	LEC	LE	3	0		N	G50		0
				GEC1: A-F REQUISITE: Pattern recognition's (PR) goal is the recognition and classification of objects, patterns, images, signals, or waveforms into a number of categories or classes. PR is an integral part in most machine intelligence systems designed for decision-making. Rapidly developing technology with cross-disciplinary interest and participation with other areas such as adaptive signal processing, AI, neural net, optimization and estimation, fuzzy sets, structural modeling, and formal languages. PR applications include image and video processing; machine vision; seismic analysis; radar signal classification; face, gait, speech and character recognition; Fingerprint identification; surveillance; navigation; OCR; medicine and biological sciences; CAD; multimedia systems; digital libraries. Addresses three different (statistical, syntactic, and neural-network) approaches to PR problem.

ENT	EECS	EE	7183	<b>Reinforcement Learning</b> ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence.  "Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward---are the two most important distinguishing features of reinforcement learning."  This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time?	LEC	LE	3	0		N	G50		0
ENT	EECS	EE	7213	<b>Cognitive Neuroscience and Embodied Intelligence</b> ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible.  The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined.  Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment.	LAB	LB	4	0		N	G50		0

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	EE 6713						
		COURSE DESC:		Good knowledge of Fourier transforms, properties, basic DSP: sampling, DTFT, and discrete time filtering (grad DSP course EE6713) required. Structured to cover two areas: the broad area of time-frequency (TF) analysis, and the focused application of wavelets to various signal processing tasks. In TF analysis, covers the fundamental need for this type of analysis, the uncertainty principle, densities, characteristic functions, and mathematical representations, the short-time Fourier transform and Spectrogram, the Wigner distribution, other TF distributions, and some TF distribution construction methods. Various examples will be used to illustrate the power and challenges of TF analysis. In the wavelet section, connects TF analysis to the use of wavelets, and covers multiresolution analysis, 1D and 2D compression of signals and images, noise reduction, and signal modulation. MATLAB Wavelet Toolbox used to implement, study, and visualize the operation of wavelet filter banks.

		COURSE DESC:		This course examines the aspects of technical operations management and how when applied effectively they can provide an organization with a product or service with higher quality and at a lower cost than their competition. Emphasis is on providing a conceptual understanding of the operations function, which includes: business measures, product/service design, capacity planning, facilities planning and layout, work system design, managing quality, materials planning and inventory control, supply chain management and automatic identification & data capture.									
				Operations is an essential function in all organizations, manufacturing or service, private or public, profit or non-profit. Technical operations managers work in factories, sports facilities, restaurants, banks, hospitals and clinics, airlines, etc. Operations are typically, by far, the largest segment of an organization with the largest budget, number of employees and square footage in the facility. All other departments in organizations interact with and are affected by Operations. For these reasons it is important to understand the operations functions.

				Radio frequency identification (RFID) is a key technology within the supply chain and automatic identification arenas. This course will introduce students to the various types of FRID that exist, why it is such an important topic and how to successfully implement RFID to solve a business problem. Lectures, assignments and various projects will help students to understand the advantages, obstacles and various issues surrounding the technology.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	EMGT 6000						
		COURSE DESC:		Principles and techniques of accounting, finance, performance measures and decision making are examined and applied in the engineering management context. Methods of cost accounting are presented, compared and used. Relationships between cost, volume and profit are illustrated, and related parameters are calculated. Budgets for production, direct labor, manufacturing and other functions are prepared. Performance measures are analyzed and applied. Differential analysis techniques are used to support engineering management decisions. Financial statements and statements of cash flows are examined and interpreted to assess the financial health of engineering organizations.

		COURSE DESC:		Students work in teams to complete a real-world industrial and systems engineering project, under the co-direction of an industry mentor and a faculty member. The projects require students to integrate and synthesize industrial engineering tools and skills to solve their assigned problem.									
ENT	ISE	<b>ISE</b>	<b>4300</b>	<b>Introduction to Designed Experiments</b>	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ISE 3200 or MATH 2500									
		COURSE DESC:		Design and analysis of engineering experiments approached from linear statistical model point of view. Blocking designs, full and fractional factorial designs, analysis of variance, and introduction to response surface methodology. Software for statistical analysis is utilized.									
ENT	ISE	<b>ISE</b>	<b>4310</b>	<b>Introduction to Systems Engineering</b>	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Sr only									
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.									
ENT	ISE	<b>ISE</b>	<b>4311</b>	<b>Applied Systems Engineering</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (ISE 3040 or 3200) and (jr or sr)									
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.									
ENT	ISE	<b>ISE</b>	<b>4315</b>	<b>Decision Theory</b>	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ISE 3200 or MATH 2500									
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.									
ENT	ISE	<b>ISE</b>	<b>4320</b>	<b>Inventory and Manufacturing Control II</b>	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ISE 4120									
		COURSE DESC:		Discussion of more advanced inventory and manufacturing control methods. Topics include forecasting, inventory control, aggregate planning, materials requirements planning, capacity requirements planning, conversion to cells, just-in-time/kanban, scheduling procedures, and production-rate based scheduling. A kanban design project is required as part of the course.									
ENT	ISE	<b>ISE</b>	<b>4325</b>	<b>Supply Chain Engineering</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (MATH 3200 or 3210) and (ISE 3200 or ISE 3040 or CE 4000 or EE 3713 or MATH 2500)									
		COURSE DESC:		This course explores the key issues associated with the design and management of supply chains. Supply chains are the cornerstone of today's global economy and are concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time.									
ENT	ISE	<b>ISE</b>	<b>4330</b>	<b>Cost Engineering</b>	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ET 3300 and ISE 3200									
		COURSE DESC:		Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ETM 3070									
		COURSE DESC:		Provides the students with an understanding of the fundamentals of computer integrated manufacturing. Several issues will be addressed, product design and tolerances, numerically controlled machines and programming, CAD/CAM integration, process engineering, and process planning. Students will learn how to apply these techniques as a part of the typical manufacturing engineering task. The emphasis will be on interactions and interdependencies between the covered techniques.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.									
ENT	ISE	<b>ISE</b>	<b>5311</b>	<b>Applied Systems Engineering</b>	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.									
ENT	ISE	<b>ISE</b>	<b>5315</b>	<b>Decision Theory</b>	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.

				This course covers the history, analysis, flight mechanics, and design of modern rockets and missiles. A historical perspective of the significance and design practices used to develop rockets and missiles are explored. Each of the five major rocket and missile components are discussed and analyzed separately and then combined to form a flight system. Mechanics of flight and basic aerodynamics are covered in order to develop a six degree of freedom flight simulator. A final project occurs to allow exploration of a design and simulation of a full rocket delivering a payload or a tracking missile.

		COURSE DESC:		Approaches photography as a set of problems and concepts rather than as a unified medium with a linear history. Photography is marked by multiple, often contradictory practices at the nexus of differing discursive and contextual parameters. As a result, the main interest is not only with the photograph as an object of study, but as a modality of thinking and a way of producing new models of visibility. We will investigate the criteria used to identify and discuss photographic images and practices over the century and a half since the inception of processes resulting in photographic material. At the same time, we will ask after the ways in which photographic practices elucidate aspects of the historical context from which they are drawn.

		COURSE DESC:		This course explores the relationship between visual art and spatial modes of display, installation, collection, and exhibition. Using historical case studies, we question the white-wall gallery as the primary home of fine art, finding instead a rich history of alternative spaces and presentation techniques. Selected case studies include: cabinets of curiosities, salons, modern galleries, museums (art, science, natural history), department stores, archives, cities, gardens, fairs, and various mediated spaces (pictorial, electronic, virtual). This class considers how spatial conditions factor into the production and reception of art, visual culture, and media.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Jr or Sr									
		COURSE DESC:		Looks at the three decades of artistic production in America and Europe after World War II and the Holocaust. It focuses Develop language to discuss, describe, and generate formal analyses of art works.on four main questions: first, how did artists attempt to come to terms with the violent rupture in European civilization caused by the dehumanizing forces of war and genocide? Second, how did artistic production assist in the reconstruction of culture and community? How did they forge a connection to the prewar avant-garde? Third, how did artists attempt to engage the increasing presence of media and advertisement production, what Theodore Adorno referred to as "The Culture Industry," and George Bataille has discussed under the rubric of "The Marshall Plan," roughly understood as the "Americanization" of Europe. Last, how does our focused examination of postwar European Art in relationship to post-war American art de-center the art historical narrative that focuses primarily on American art centering on New York? How might our queries suggest a different narrative?									

Presents a historical approach to the development of art in America, Italy, France, Germany and the Netherlands from the first attempts to represent the atrocities of war to the critique of institutions of power in the '60s through to the return of painting as a form of historical reflection in the late '70s and early '80s. Does not claim to provide an exhaustive catalogue of every important artistic activity after the war. Rather, specific figures will be examined as case studies of the interrelationship between aesthetic, historical and ideological issues from 1945 on.

Finally, introduces the history of contemporary artistic practices from the 1960s to the present, and the major critical and historical accounts of modernism and postmodernism in the arts. Focusing on the interrelationships between modernist culture and the emerging concepts of postmodernism and contemporary art, addresses a wide range of historical and methodological questions. These include the evolving idea of artistic autonomy, the changing role of cultural institutions, the shifting relationship of high art and mass culture, the impact of new technologies on cultural production, and the emergence of new audiences for art.

		COURSE DESC:		PR Approaches photography as a set of problems and concepts rather than as a unified medium with a linear history. Photography is marked by multiple, often contradictory practices at the nexus of differing discursive and contextual parameters. As a result, the main interest is not only with the photograph as an object of study, but as a modality of thinking and a way of producing new models of visibility. We will investigate the criteria used to identify and discuss photographic images and practices over the century and a half since the inception of processes resulting in photographic material. At the same time, we will ask after the ways in which photographic practices elucidate aspects of the historical context from which they are drawn.

		COURSE DESC:		This course explores the relationship between visual art and spatial modes of display, installation, collection, and exhibition. Using historical case studies, we question the white-wall gallery as the primary home of fine art, finding instead a rich history of alternative spaces and presentation techniques. Selected case studies include: cabinets of curiosities, salons, modern galleries, museums (art, science, natural history), department stores, archives, cities, gardens, fairs, and various mediated spaces (pictorial, electronic, virtual). This class considers how spatial conditions factor into the production and reception of art, visual culture, and media.

		COURSE DESC:		Looks at the three decades of artistic production in America and Europe after World War II and the Holocaust. It focuses Develop language to discuss, describe, and generate formal analyses of art works.on four main questions: first, how did artists attempt to come to terms with the violent rupture in European civilization caused by the dehumanizing forces of war and genocide? Second, how did artistic production assist in the reconstruction of culture and community? How did they forge a connection to the prewar avant-garde? Third, how did artists attempt to engage the increasing presence of media and advertisement production, what Theodore Adorno referred to as "The Culture Industry," and George Bataille has discussed under the rubric of "The Marshall Plan," roughly understood as the "Americanization" of Europe. Last, how does our focused examination of postwar European Art in relationship to post-war American art de-center the art historical narrative that focuses primarily on American art centering on New York? How might our queries suggest a different narrative?									
				Presents a historical approach to the development of art in America, Italy, France, Germany and the Netherlands from the first attempts to represent the atrocities of war to the critique of institutions of power in the '60s through to the return of painting as a form of historical reflection in the late '70s and early '80s. Does not claim to provide an exhaustive catalogue of every important artistic activity after the war. Rather, specific figures will be examined as case studies of the interrelationship between aesthetic, historical and ideological issues from 1945 on.									
				Finally, introduces the history of contemporary artistic practices from the 1960s to the present, and the major critical and historical accounts of modernism and postmodernism in the arts. Focusing on the interrelationships between modernist culture and the emerging concepts of postmodernism and contemporary art, addresses a wide range of historical and methodological questions. 				Photography is a tool to document our existence. Photos say, "this is me, my body, my family, my home, my experiences. Let me record and remember. Let me share. Here I am." This is part of what makes up an album--a photographic record of looking, sharing, and remembering--made from close members in our community, our family. This class focuses on the power of the photograph to share the personal. This class engages in reflective writing and creative sharing based on vernacular images and their uses in art and culture.

		COURSE DESC:		REQUISITE: ART 2810 and Jr or Sr									
				This course provides an introduction to view camera operation and the basics of studio lighting. Students build on the fundamental technical skills and conceptual issues of analog black and white photography covered in ART 2810, with a special focus on refining darkroom skills and large scale printing. Through an introduction to its history and contemporary practitioners, students engage in dialogue about the aesthetic and conceptual potentials of film-based photography. In addition to skill building, there is an emphasis on the fundamental questions of why and how artists use these tools within the larger context of contemporary art. Class time is devoted to demonstrations, lab periods, presentations, discussions and critiques.

				Critique Community is a workshop for the development of individual studio art practices. Students pursue individual projects of study, research, and production within disciplinary, multi-disciplinary and interdisciplinary frameworks. Students build upon skills initiated in their concentrated areas of study toward a new body of work as their culminating thesis project. In doing so, they explore means, methods, forms and strategies for exhibition or dissemination of the thesis work.									

Ongoing critique experiences with the instructor and peers guide their project's progress throughout the semester. Discussion and readings help students to position their work within the discourse of contemporary practices. Presentation of ideas and concepts both verbally and in written statements accompany studio production.

		COURSE DESC:		30-Mile Studio (30MS) is an interdisciplinary fine arts studio devoted to place-based, social practices in the region. Each semester, the 30MS partners a team of students with a community organization. Working together, we investigate and implement the principles of community-centered arts through projects that address regional needs. This course is intended for students seeking professional theories and methods in community engagement, creative placemaking, and social entrepreneurship across the arts. All disciplines are welcome.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	FAR 5100						
		COURSE DESC:		Effective communication is vital for the success of arts organizations. Concepts and skills in this course draw from the fields of communications, public relations, cultural policy, marketing, and strategic planning to help students approach communication in ways that build understanding of, and commitment to, organizational mission, strategic initiatives, and fundraising activities. Areas covered include a range of communication across a variety of platforms to develop a strategic plan focused on the organization's story, building capacity with internal and external stakeholders, and engaging with culturally responsible management practices. This is a required course for all students pursuing the Arts Administration MA degree and the Graduate Certificate in Arts Administration.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course focuses on a variety of development topics and approaches including, but not limited to, capital campaigns, grant writing, and management of strategic resources and revenue streams for arts organizations. Students gain a working knowledge of perspectives, techniques, and principles of nonprofit fundraising. Students learn to analyze and evaluate fundraising efforts and methods. Students also think critically and creatively about challenges facing arts organizations and how relationships with boards, donors, and stakeholders shape those dynamics and considerations. Students have the opportunity to focus on team building and work collaboratively on interest-driven group projects. This is a required course for all students pursuing the Arts Administration MA degree and the Graduate Certificate in Arts Administration.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		The Professional Internship is the required, culminating experience of the Arts Administration MA degree and applies and synthesizes coursework. Advisor must approve all internship placements. During the professional internship, students continue to explore programmatic learning objectives and focus on topics including: organizational culture, structure and governance; marketing and resource allocation; programming and education; mission, vision, law, and ethics; fundraising and grants management; and community engagement. Students enrolled in the Professional Internship meet weekly to focus on various symposium issues of professional practice. The discussion component of this course is designed to be adaptive and responsive to emergent topics and issues that occur during the internship experience. As part of the course, and with instructor guidance and feedback, students develop their final capstone projects or portfolios.

		COURSE DESC:		The seminar explores the musical-aesthetic thought outside the Western world, from ancient sources to contemporary debates. The readings include mythological, religious, literary, and philosophical texts, both traditional and modern. The areas of musical creativity that will be discussed comprise classical traditions and popular genres, including the uses of music in mass entertainment, ideological propaganda, and devotional practices. Literary, visual, and video materials will help illustrate the attitudes towards music in these cultures. In addition, the seminar will pursue a methodological theme of considerable urgency: Do the existing historical and contemporary approaches do justice to the uniqueness and complexity of music-philosophical theorizing in the cultures of, for example, India, China, or Bali? What kind of an approach would allow us to avoid the pitfalls of comparativism, Orientalism, and distorting biases in general? What kind of a philosophical perspective can assure at once a meaningful multilateral dialogue among world musical cultures, and their resistance to the levelling effects of globalization? A variety of texts, both by authors from a relevant cultural tradition and by Euro-American commentators, will serve as a platform for addressing these questions.

				GEC1: A-F REQUISITE: ANTH 1010 and Sr This course is intended to give students an overview of the two contributing cultures and their musics found in this country, from the songs of rural Appalachia and New England to the African music brought by the slaves; to the musics that grew out of those traditions, from the popular musics of the cities to the songs of Latin Americans and European minorities. We will trace the way these musics live in the modern city, in the academic world and in contemporary music society. (Nettl, 1976) The student will be introduced to the study of music as a manifestation of human need and a representation of culture. The course uses music as an index to understand American culture while it introduces the student to various concepts in the field of ethnomusicology. (Nettl, 1976)

		COURSE DESC:		This is an experiential-participatory class that includes a pedagogical and service-learning component. Students will learn fundamental acting techniques, improvisations and theater games appropriate for the elementary school population. We explore methods that cultivate the imagination, creative collaboration, and the expressive use of body and voice toward developing story and character. We align each exercise with specific learning outcomes, and have the opportunity to apply those learned teaching skills in educational and outreach settings. Elements of production are introduced (material, venue, design, fundraising and marketing), and applied to organizing an informal public performance. The class revolves around the transformative power of theater, and how it can enrich lives and support curriculum.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ES 3620							
		COURSE DESC:		Resiliency has emerged as a central concept across a wide variety of fields including: city planning, policy analysis, human security, economics, natural resource and environmental management, public services, infrastructure planning, engineering, technology innovation, and indeed any field dealing with rapidly changing systems. Students unpack and apply ideas in resiliency theory to a broad range of fields of practice, link new theory with application, and gain real world experience in applying these concepts. Students examine resiliency as a general concept, critique the concept as a management approach, and focus on concrete applications.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ES 3620							
		COURSE DESC:		This course introduces students to the study of climate policy and planning. Students examine the range of mitigation, adaptation and resilience approaches for managing greenhouse gas emissions and the impacts of climate change to improve human and environmental security. Students gain an understanding of the implications of climate change science for public policy making and hands-on experience in using climate information for preparing a climate change plan. Students explore a basic overview of public policy theory, discuss various policy options for mitigation and adaptation policy, and gain the skills necessary for incorporating climate into a diverse area of public policy issues. Students are presented with the general theory, analytic frameworks, and specific techniques necessary to analyze climate change policy alternatives within a larger human security framework. The skills learned in this class are applicable to a variety of levels of government planning (local, state and national) as well as across the private, nonprofit and public sectors.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ES 3620 or GEOG 3580 or GEOG 4520							
		COURSE DESC:		Climate change and other rapid environmental changes create risk to communities, infrastructure, and human security; managing these climate-related risks requires understanding of the community, its risk perception, and collaborative communication and management planning. Students characterize risk to communities from climate change and explore risk perception theory and methods to manage threats to human security. Students discuss concepts of justice and equity in risks to human security, risk management, and communication. Students explore these particular climate change and environmental challenges through the multidimensional and interdisciplinary lens of human security.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:								
		COURSE DESC:		Students gain an understanding of the historical uses, current trends, and potential future production of bioenergy. Students learn how to describe and interpret life-cycle impacts of bioenergy production systems. The course reviews national (U.S.) and international policies that regulate bioenergy production; and analyzes the crop species, agro-ecosystems, land managements, conversion technologies, co-products, transportation infrastructure, and end uses of bioenergy production pathways for both solid and liquid fuels. Students also evaluate the ecological impacts, land and water requirements, economic efficiencies, and energetic efficiencies of bioenergy systems relative to other energy systems.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:								
		COURSE DESC:		Energy systems are undergoing rapid change due to resource constraints, market forces, local, state, national, and international policy, and environmental impacts. Public administrators have a need to understand the implications of energy systems and the policies that govern them. This course presents traditional and emerging energy systems and how policy affects these systems.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:								
		COURSE DESC:		Students gain an understanding of key problems, root causes, and potential entrepreneurial solutions relevant to selected contemporary environmental challenges. Students apply interdisciplinary perspectives to identify, analyze, and evaluate environmental issues, measure impacts, and establish criteria for effective remedies. The course reviews key environmental challenges within selected areas (with topical themes chosen from contemporary issues in environment, health & well being, education, economic development, and other timely topics.) as well as fundamentals of social entrepreneurship to enable students to design and present enterprise development models for market-based social ventures seeking to deliver such remedies. Students learn how to pitch venture proposals to address criteria evaluating efficacy, feasibility, sustainability, and potential "return on investment" for both financial and social/environmental impacts.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ES 3620							
		COURSE DESC:		Agricultural production systems comprise a fundamental sector of the economy, of which many policy makers have only specialized knowledge based on single commodities. Students gain an overview of the diverse portfolio of agricultural products that drive essential systems in the United States, and the major challenges that exist for achieving resiliency in the agricultural sector. Students explore food, livestock, fiber, and fuel crop management and associate supply chains that are complex systems influencing social, environmental, and economic resilience.

GVS	ES	ES	6850	<b>Capstone: Resilient Infrastructure and Communities</b> GEC1: A-F REQUISITE: COURSE DESC: Resilience theory has emerged as an approach for understanding how systems are able to thrive through rapid, often unexpected change. Managing for resilience is key in preparing for some of the greatest challenges that society faces including climate change, globalization, and rapid urbanization. In this capstone, students analyze the risk and vulnerability of a community, organization, or infrastructural system to unexpected change and develop strategies to improve the community or organization's resilience. Students critically evaluate the resilience preparation at a local, state, regional, and national level to highlight both best practices and lessons learned. They then select a system in which they are most interested; infrastructure, urban centers, community plans, ecological systems, organizational, and others. Students engage with organizations and communities to develop a resilience plan for that system with a focus on improving sustainability, human security, and resilience.	LEC	LE	3	0		N	G40		0

		COURSE DESC:		A communications plan is an important part of an organization's daily operation. Additionally, for public and nonprofit organizations in particular, the activities in the plan should support overall communications goals in ways that help raise money, create change, recruit talent, and promote mission-related goals and objectives. As a living document, it frames the way both internal and external audiences perceive the organization; and since many nonprofits have limited staff and financial resources available for communications activities, it is even more important that these resources be deployed as strategically as possible. This course offers an overview of communications concepts and media activities in ways that will help students develop a strategic communication plan focused on emphasizing a commitment to organizational mission; building trust among internal and external audiences; clarifying organizational priorities; and generating public value.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	WARNING: No credit for this course if taken after CSD 5850							
		COURSE DESC:		This is the first in a sequence of six American Sign Language (ASL) courses. Course focuses on the foundational aspects of ASL such as the manual alphabet, various number systems, basic grammatical structure, non-manual grammatical markers, listing, ranking, contrastive structure, and the use of space. The course applies a conversational, deaf studies approach. The history and culture of the deaf community in the United States is introduced.

		COURSE DESC:		This is the third in a sequence of six American Sign Language (ASL) courses. Intermediate level ASL classes provide students opportunity to develop more complex expressive and receptive conversational skills. Emphasis is placed on expressive ASL using classifiers in ASL storytelling. Topics revolve around sharing information about the environment and everyday communication. Grammar is targeted in context with an emphasis on further development of discourse skills. Students learn conversational strategies to maintain more complex ASL conversations. This is a continued study of Deaf community and more complex ASL literature. Registered students attend a section of the second-year undergraduate course.

				ELIGIBLE GRADES: GEC2: A-F, REQUISITE: PT 7111									
				COURSE DESC: Provides students with an overview of topics from a cellular to a systems level. Gastrointestinal, genitourinary, hepatobiliary, renal, endocrine, and metabolic systems will be covered. Additionally, the role of physical therapy in acute care and the Intensive Care Unit (ICU) will be covered. For each topic area or system, the student will be presented with the pathophysiology focused at the cellular and tissue level. The role of physical therapists in differential diagnosis, by recognizing the signs and symptoms associated with impairments of the systems, will be presented. Prepares the student to identify the patient with systemic pathologies requiring further consultation or referral to other health care providers.

HSP	RCS	PT	7300	<b>Clinical and Professional Orientation in Physical Therapy</b>	LEC	LE	1	0		N	G50		0
				ELIGIBLE GRADES: GEC2: A-F, REQUISITE: Admission to the PT program									
				COURSE DESC: This course is designed to introduce students to some of the professional role responsibilities and the processes and requirements for clinical education experiences. Beginning with profession expectations and history of the profession, the course provides foundational information on physical therapy practice. The students will begin their Professional Development portfolio. The latter portion of the course is focused on preparing the student for clinical experiences in the curriculum.

				ELIGIBLE GRADES: GEC2: A-F, REQUISITE: Admission into the PT program									
				COURSE DESC: This course introduces students to professional role responsibilities and the profession's core documents. Clinical education processes and requirements are discussed. Health Insurance Portability & Accountability Act (HIPAA), Bloodborne Pathogens, and Tuberculosis Transmission and Prevention trainings are completed. Foundational information related to legal, ethical, and professional behaviors, professional communication and cultural competence, and the history of the profession is provided. Students are also introduced to the Program's Professional Development Portfolio.

		COURSE DESC:		The first of a two-course series that provides knowledge, concepts, and fundamental skills needed for beginning level practice in public and private child welfare. Focuses on interventions to protect children from abuse, neglect, and sexual abuse by strengthening, supporting, and empowering their families. Organized around four themes. First, content is provided on the mission and scope of child welfare practice, articulating the underlying philosophy and values that drive child welfare practice, and addressing cultural and relationship issues when working with families. Second, the course provides conceptual and practical information on identifying child maltreatment, assessing family needs and strengths, and determining both immediate and long-term risk to children of future maltreatment. Third, information is presented on case planning and applying a casework model to working with families. Fourth, content is presented on interviewing skills in child welfare setting, especially as these skills relate to family assessment and case planning activities.

				This course introduces students to fundamental principles of ethical community engagement that begin with an understanding of how first to engage with a community through the identification and elevation of its assets. Students are asked to reflect on their perceptions of communities with which they have no previous relationships, encouraged to interrogate the factors that have influenced those perceptions, and challenged to expand their understanding of those communities through research and engagement with community members. Through that process of self-reflection, students also are challenged to consider ways of engagement that are mutually beneficial to themselves and their community partners. In addition, this class explores the tension associated with navigating structural and cultural differences to find common goals and create partnerships that facilitate the achievement of community partners' missions as well as academic expectations for the students.

		COURSE DESC:		This course deals with the theory and practice of living and studying in other cultures and is designed specifically for students preparing to participate in one of OHIO's education abroad programs. Students gain the culture-general skills and critical thinking to explore and understand both their own culture and the culture of their host country. Through class discussions and homework assignments, students apply the general ideas and concepts discussed in the course to their particular host country. The development of an informed cross cultural perspective is essential if students are to have a transformative learning experience and gain the maximum academic, cultural and social benefit from their academic experience abroad. The cross cultural course component is complemented by a course segment focused on teaching students the skill set required to successfully navigate the logistics of study abroad.

		COURSE DESC:		This course introduces students to the norms, practices, and structures underlying global collective order. It examines shifts from governments to governance in the management of international affairs, as well as the policy debates and coordination challenges these entail and the core theoretical concepts we use to understand them. How has increasing interdependence shaped the ways in which modern states and non-state actors identify and respond to collective goods and harms? The course begins with a consideration of new risks and rewards created by contemporary globalization in areas of security, aid and development, trade and finance, and human rights. We consider who 'wins' and 'loses' in the international system by addressing issues of power, authority, and legitimacy as well as the changing roles of states, formal and informal Institutions (e.g. The UN, WTO), NGOs, and transnational corporations. We conclude by examining the formation an 'international community' and assessing its capacity in responding to collective challenges such as poverty and inequality, trans- and sub-national political violence, economic regulation, cyber, energy, and environmental security, and humanitarian intervention.

		COURSE DESC:		The Clinical Anatomy Immersion allows all entering Heritage College students, regardless of their curricular track, to begin their training together, immersed for roughly 5 weeks in clinically-oriented study of human gross anatomy. At the core of the course are the laboratory activities. Students will participate in 4, 3-hour gross anatomy labs each week. These activities involve dissection of human cadavers, imaging studies, and discussion of clinical anatomy in an interactive laboratory setting. The structure of the human body is presented in a clinically relevant manner, providing correlations of normal anatomy to common disease states. The ultimate goal is to enhance clinical reasoning in the context of human gross anatomy. A few key lectures will provide background for the lab studies

		COURSE DESC:		This one-week course will introduce students to Patient Centered Primary Care medical practice, and will incorporate active learning principles. On the first day of the block, students will be introduced the "5 Cs of patient-centered primary care". These concepts will be emphasized over the next 5 days and be the basis for all of the learning activities. Additionally, there will be a doctor-patient communication thread of activities that build students' skills throughout the week, culminating in a patient interview, and a reflective paper on that experience. This course provides protected time outside of class for students to learn and prepare for in-class hands-on activities that incorporate that knowledge into tangible skills.

		COURSE DESC:		Fundamentals in Clinical Osteopathic Medicine 1 and 2 are a series of courses devoted to assisting students in developing clinical skills necessary to work towards mastery of the AOA Core competencies. Fundamentals in Clinical Osteopathic Medicine 1 is a sixteen week course. The focus is on History and Physical (H&P), Osteopathic Manipulative Medicine (OMM) skills and Clinical and Community Experiences (CCE). Integral to all of these areas are psychosocial skills. Other components will guide the student in learning specific psychosocial and psychomotor skills, as well as reinforce the importance of an evidence-based approach to the clinical application in the practice of medicine. The format of the course incorporates clinical lab sessions, utilizing peers or simulated patients for practice in obtaining history and performing physical examinations. On occasion, learning activities will utilize real patients. Clinical cases in the concurrent Biomedical Sciences course are structured to foster learning objectives that enhance History and Physical exam skills. An ongoing thread in this course is the Problem Oriented Medical Record (POMR) and medical progress notes (SOAP notes) tools students need to develop and maintain excellent documentation of clinical encounters. The OMM lab component for this course is taught to PCC students in conjunction with the students in the CPC curriculum. Students will be assigned to one or more clinical faculty for 8 four-hour experiences per quarter to be given an opportunity to practice their developing clinical skills. They will also be assigned to community agency preceptors for 2 four-hour experiences per quarter in order to develop an understanding of the roles of non-physician personnel and health care services provided outside the hospital/physician's office. Objectives and activities for each community agency experience are available on the CCE website.

The cases encourage the student to develop neurological diagnostic skills based on principles of neuroanatomy, neurophysiology, neuropharmacology, neuropathology, infectious disease, and epidemiology. The skills of history taking and physical examination are reinforced in laboratory sessions on the neurology examination. Mastery of clinically relevant neuroanatomy is facilitated in lab sessions devoted to brain dissection. The cases also lead students into considerations of the psychosocial management, pharmacological treatment, OMM, surgery intervention, and rehabilitation of patients with neurological disorders.

		COURSE DESC:		This five-week Endocrinology and Metabolism course presents an opportunity for students to delve into the major endocrine systems in the body, including the pituitary, thyroid, parathyroid adrenal and pancreatic glands. Students explore the regulatory mechanisms of the hormones secreted by these glands and the metabolic effects elicited by these hormones. A major focus of the course is the clinical relevance of hormonal signaling on bone metabolism, growth, and carbohydrate, lipid and amino acid metabolism. Hormonal control under normal physiological conditions is contrasted with disease states such as electrolyte imbalance, growth disorders, weight homeostasis and diabetes. By the end of this course, students will integrate and understand the underlying mechanisms by which these hormones act and how these signals are interpreted by tissues such as liver, bone, adipose, and muscle to coordinate metabolic changes in the body.

		COURSE DESC:		This three-week Geriatrics course introduces Clinical Presentation Curriculum (CPC) students to key concepts essential to caring for older adults. The Block begins by presenting the aging demographic imperative. There are not enough geriatricians to care for this growing segment of the population. Therefore, it is critical that all medical students are trained to meet the needs of older citizens with complicated, overlapping, factors associated with chronic medical conditions. Older adults often have three or more chronic medical conditions, take multiple medications and respond to treatments and medications differently than do younger patients. This block targets these often complicated overlapping factors. An emphasis is placed on understanding the following: aging versus disease; geriatric syndromes and atypical presentation of disease; providing care across the continuum of locations: ambulatory, hospital, assisted living, nursing home, and home; comprehensive geriatric assessment; psychosocial and environmental considerations; pharmacology/prescribing practices; and advance directives.

		COURSE DESC:		This course is a one-year rotation, during the third year of medical school, situated within a rural or urban underserved family medicine practice and providing exposure to the continuity of primary care across the continuum of the inpatient and outpatient settings. It exposes the student to the breadth of family practice including medical care of all ages, as well as enhances the student's ability to provide continuity in care. This rotation also exposes the student to the collaboration of health care entities in the community, practice, management, practice quality improvement, and possibly research. It also provides exposure to the direct supervisory role of the physician CNP/PA/MA relationships. Overall, the goal of this rotation is to allow the student to develop rural/urban primary health care training by developing a continuity practice of their own under the direction of their supervisory site director. With this knowledge and experience, a better understanding of the scope of rural/urban underserved primary health care is achieved.

		COURSE DESC:		The purpose of this rotation is to provide an opportunity for the student to explore issues in the delivery of health services in other countries. This rotation is not intended to transform the student into a specialist, but rather it is to provide a survey of the specialty. Students will need to use a logical and appropriate clinical approach to the care of patients in a developing country setting, utilizing locally available resources, and applying principles of evidence-based decision-making and problem-solving. These experiences are designed not only for students considering careers in international health, but for increasing the understanding of any future physician practicing in the United States who may care for patients from other countries. The experience is also designed to deepen the awareness of all participants regarding the determinants of health and illness and diverse methods of approaching health problems in settings with varied cultural, socio-economic and political characteristics. These experiences help students develop sensitivity to health disparities and their causes, including health, social, economic and environmental factors.

		COURSE DESC:		The purpose of this rotation is to provide the student with the opportunity to develop or enhance his/her knowledge and skills to a level appropriate for a beginning researcher. To accomplish this, the rotation provides an opportunity to write a case report and submit it for publication. A case report is defined as an account of the signs, symptoms, diagnosis, treatment and follow-up of a patient that follows an unusual or noteworthy case presentation. A case report can consist of a single-case study or a multiple-case study (N<11). In hospital and ambulatory settings (as appropriate), the student potentially may encounter unique or rare illnesses/diseases or treatment and therapy. To achieve the rotation objectives, the student is expected to apply the concepts of diagnosis and management to the patient, develop a working knowledge of both inpatient and outpatient treatment modalities, be familiar with human subjects protection and its implication on collection of patient information, write the paper following a target journal's submission guidelines, and submit the manuscript for publication as means of contributing to evidence-based medicine. Throughout the rotation, students should have multiple opportunities to perform different aspects of scholarly work and to practice problem-solving skills. The student should enroll for the research rotation only after they have found an acceptable case to report; the rotation should not be used to locate a case to report upon.

		ELIGIBLE GRADES:		GEC3: A-F, REQUISITE: Permission required and Soph only									
		COURSE DESC:		Leader's Training Course (LTC) is four weeks of intense classroom and field training held in the summer at Fort Knox, Kentucky. By transforming yourself through this rigorous training, you will qualify for enrollment in the Army ROTC Advanced Course. At LTC you experience the Army firsthand by developing your potential in the most important of ways-mentally, physically and emotionally. You will be grouped into squads where you will gain experience in all leadership roles-culminating in verbal and written feedback on your improvement. You will also receive a stipend, transportation to and from Fort Knox, housing and meals. The first phase begins with Physical Training (PT) and Drill and Ceremony (D&C) which instill self-discipline and prepare you for the rigors and challenges of the upcoming weeks. The second phase builds on the basics Cadets have learned by extending into adventure training in the field. Combat Water Survival Training, rappelling, land navigation and marksmanship training provide physical challenges that test Cadets individually while developing teamwork skills. In the third phase, Cadets learn squad-level operations by taking part in demanding field exercises.

		ELIGIBLE GRADES:		GEC3: A-F, REQUISITE: MSC 3020									
		COURSE DESC:		CR The mission of the Leader Development and Assessment Course (LDAC) is to train U.S. Army ROTC Cadets to Army standards and to develop leadership and evaluate officer potential. This is accomplished through a tiered training structure using light infantry tactics as the instructional medium over a 28 day period. The Warrior Forge training program is sequential and progressive. It starts with individual training and leads to collective training, building from simple to complex tasks. This building-block approach permits integration of previously-learned skills into follow-on training. This logical, common-sense training sequence is maintained for each training cycle. Every day at LDAC is a day of training. Some of the major training events include the Army Physical Fitness Test, land navigation, weapons training, confidence building, and small unit leadership evaluations.

		COURSE DESC:		This course examines the relationship between drug use and crime in American society. It serves as a synthesis of the abuse of drugs and the societal consequences in relation to crime and the criminal justice system. In this course students examine the attributes of the people who use drugs, the social dynamics that influence legality, and the norms and characteristics of the society in which the substance use occurs. We conduct an examination of drug use and crime at the micro, meso, and macro levels of analysis. In particular, students gain an understanding of the nexus between individual use, crime, and systematic violence tied to criminal organizations that sell and traffic drugs. Students move beyond U.S. borders and explore drug trafficking and global politics. Prevention, intervention, and treatment tactics used in the U.S. criminal justice system are explored and critiqued. Finally, public policy concerning drug related issues are examined.
