				Multiple-Entity Accounting and Tax Planning focuses on business combinations and consolidations. It will include financial accounting and reporting, foreign currency transactions and translation, and tax implications of business combinations. As the capstone course for the accounting major, we will include discussions of the accountant's role in society. In particular, the accountant's role in ethical conduct, civility, leadership and sustainability will be an integral part of this course. The course is designed to motivate students for the accounting profession, promote technical competency, develop life-long research skills, advance critical thinking, and foster the development of communication skills.									
				The primary references for this class are the Accounting Standards Codification and handouts posted on the class forum.

		COURSE DESC:		This course covers the analysis of data as it pertains to accounting professionals. The focus of this course includes both analytic techniques for decision making and the examination of big data involving accounting information. Hands-on experiences develop skills with select software tools used in data analytics for accounting professionals. This course challenges students to think critically about whether and how data improves business performance, creates opportunities, and/or creates risks. In-depth discussion and skill development is concentrated on analysis and use of the data acquired. Students gain experience with the technology used for data analysis in the accounting profession. Project-oriented computer-based assignments are used in this course to enhance a student's knowledge and skills. Please keep in mind that this is not a computer course. However, it does require extensive use of the computer as a tool.

		COURSE DESC:		Modern businesses can benefit by analyzing information stored within datasets. Predictive analytics is a form of analysis that aims to discover trends or patterns within datasets. The mathematical relationships that are found are used to make proactive, future-based, data-driven decisions. Predictive analytics is an important field of study because techniques that are used can find complex relationships that experts may overlook, or may not know at the time of the analysis. This course covers a variety of predictive analytics techniques and theories from the viewpoint of various business applications. To achieve the course learning objectives, students utilize software tools that are commonly used in business to develop, test, and apply continuous, classification and clustering models.

		COURSE DESC:		This course is for entrepreneurs building the courage to create, and risk making mistakes in their quests for true innovations in products, services or processes. You will solve problems in uncertain and dynamic environments. Creativity is the central focus, which might be defined as applying your mental ability and curiosity to discover something new, the act of relating previously unrelated things. More specifically, we focus on capitalist creativity. This means that we must apply a Business Model framework to your creativity. We demand that your solutions be profitable (have a potential to be profitable) and reflect bottom-line practicality. More importantly they must create value. We provide challenging places to fully engage your brain to discover patterns to produce breakthrough ideas that solve business problems.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course provides real world, hands-on learning on the process of actually starting a company, applying the Lean StartUp methodology. Our goal, within the constraints of a classroom and the time available is to create an entrepreneurial experience with all of the pressures of an early stage start-up. The class is designed to give you the experience of how to work as a team and turn an idea into a company. You will talk to customers, partners and competitors as you encounter the uncertainty of the start-up process. You will practice evidence-based entrepreneurship as you learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than you would want/use your product or service. Finally, based on the customer and market feedback you have gathered, you will use agile development to rapidly iterate your product or concept to build/design something customers would actually buy and use. Completion of this course is necessary for teams who wish to compete for admission to Ohio University's Innovation Engine Accelerator mentoring program, grant and investment funding opportunities via TechGROWTH Ohio and admission to other mentoring and funding opportunities designed to help start ventures at Ohio University.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: MGT 5001									
		COURSE DESC:		This course examines the principles of judgment and choice in the face of uncertainty. Students are introduced to normative (i.e., how best to decide) and behavioral decision making (i.e., how do we decide). The latter approach recognizes that people use various tricks (i.e., heuristics) that simplify cognitive processing. While these serve well in some instances, they may also become traps that lead to poor results in others. Extensive study of bias helps students to recognize these tendencies and become better decision makers following a third approach known as prescriptive decision making (i.e., how should we decide).

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		The ability to effectively manage a business includes a complete understanding of the underlying operations and supply chain linkages. This course is designed to equip students with the foundation of theoretical knowledge and skills necessary to understand the core areas of operations management. Toward this end, this course integrates textbook learning (through readings and lectures) with real world examples (through discussion boards and case studies) to provide a full understanding of Operations. The course is also designed to encourage participation in discussion of student's job experiences as they relate to core operations topics.									
				Often we are involved with developing a new system, a new product, planning an event, or participating in an undertaking that we cannot simply repeat things we have done in our past experience. These are 'one-offs' or Projects. Projects are major undertakings that have a defined life time (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration, it is important to understand and appreciate the techniques and concepts used for successful project management. This course covers some of the issues related to projects, working on project teams and tools used for managing projects.

		COURSE DESC:		An advanced qualitative methods seminar focusing on critical and contemporary ethnographic research. Students understand the history, meaning, and evolution of ethnographic fieldwork by learning about mainstream, marginalized, de-colonial, indigenous, transnational, and feminist approaches to ethnographic practices. Students explore the crucial relationship between researchers and participants, researcher subjectivity and positionality, cultural translation, the crises of representation, and ethnographic claims to knowledge. Students are exposed to critical writing epistemologies such as experimental and performative writing, ethnopoetics, and autoethnography. The course is both conceptual and practical, with theoretical discussions and hands-on training in participant observation, interviewing, analysis, and writing.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This rhetorical methods class explores narrative approaches to rhetorical criticism. "Narrative" is construed broadly to encompass methods that view rhetorical transactions as dramatic events or as story-telling. Examples of narrative approaches to rhetorical criticism include Kenneth Burke's dramatic approach, Ernest Bormann's rhetorical vision/fantasy theme analysis, or Walter Fisher's narrative perspective. These approaches tend to construe rhetorical discourse as involving heroes/villains (protagonist/antagonist), conflict, and events (a plot).

		COURSE DESC:		This course focuses on performance as a paradigm for the study of communication processes, broadly defined. Performance is approached as method, experience, metaphor, and subject of analysis. The course is both conceptual and practical. It introduces students to key concepts in performance theory such as ritual, identity performance, culture, play, performativity, performing, performance texts, and performance process. Students gain experiential training in performance ethnography, ethnography of performance, autobiographical performance, autoethnographic performance, social justice organizing and performance, and performative writing. This training is accomplished through exercises in textual, aural, performative, material, poetic, and other sense-based representation of performance and everyday life.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course covers measurement of quantitative data and the preliminary analyses required before conducting the substantive analysis of hypotheses and research questions. The measurement portion of the course focuses on decision making and techniques for producing and working with quantitative data, focusing in particular on conceptualizing and operationalizing quantitative variables. Students will explore statistical techniques for assessing measurement including reliability and exploratory factor analyses. The preliminary analysis portion of the course explores issues such as data cleaning, diagnosis and resolution of missing data issues, item-level analyses, forming multi-item scales, transformation, and evaluating confounds and covariates.									
COM	COMS	<b>COMS</b>	<b>7530</b>	<b>Mediation and Moderation in Quantitative Methods in Communication</b>	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course provides an introduction to the quantitative research method of moderation and mediation. A moderator variable is one that influences the strength of a relationship between two other variables, and a mediator variable is one that explains the relationship between the two other variables. This course is both conceptual and analytical. Students learn how to theoretically propose moderation analyses vs. mediation analyses and how to rationalize one approach over the other. Students also practice moderation and mediation through multiple regression and simple path analyses techniques (SPSS, PROCESS, and AMOS).

COM	COMS	<b>COMS</b>	<b>8310</b>	<b>Rhetoric and Popular Culture</b> GEC2: A-F, REQUISITE: PR This course introduces students to major works in the study of rhetoric, popular culture, and their relationship. It assumes that forms of popular culture (e.g., popular music, advertising, television programming, popular novels, etc.) are social artifacts that serve an important persuasive function in society. Popular culture provides conceptual and practical frameworks that orient individuals to the world. Thus, this course will help graduate students to develop a set of theoretical, methodological, and analytical resources for researching and interpreting the persuasive functions of popular culture in specific historical and geographical contexts. 		COURSE DESC:		Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Contemporary American Documentary looks at contemporary issues in American life through the work of distinguished non-fiction filmmakers. Documentaries dealing with all aspects of American society are screened and discussed. Politics, race, poverty, religion, big business and war are among the issues dealt with. The aim of this course is to illuminate and examine the issues, and to develop critical viewing skills so that students become savvy consumers of such media.									
COM	MDIA	<b>MDIA</b>	<b>2135</b>	<b>Documentary Genres</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	Soph or Jr or Sr						
		COURSE DESC:		Investigates the construction of nonfiction film and televisual documentary imagery, from the inception of motion pictures (ca 1895) through the current postmodern American landscape. In the course, a representative sampling of the documentary film canon by historical figures is screened, which will assist in gaining understanding of the contemporary context within which these documentary constructions were assembled. Because this course is taught within the School of Telecommunications, the second part of the course necessarily moves toward examining the influences American network television, cable, and video technology have had on the form.

		COURSE DESC:		Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers.

		COURSE DESC:		This course serves as one of the three core courses required for students in the Communication and Development Studies graduate program during their first semester. It introduces "Comm Dev" students to basic principles associated with conducting graduate level research, with some focus on key research considerations related to the field of Communication for Development. With that in mind, the course covers critical elements necessary for conducting graduate-level, scholarly research more generally, including identifying a research topic; accessing scholarly research; writing a literature review; and research ethics. The students are also introduced to research design, and to qualitative and quantitative methodological approaches to collecting and analyzing data. At the same time, methodological elements that help define Communication for Development as an academic and professional field serve to further inform readings, lectures, and discussions. Course topics with this relatively more specific programmatic focus include monitoring and evaluation; rapid appraisal methods (e.g. mini-surveys, transect walks, and community mapping); and participatory methods (e.g. focus groups and community discussions).

				COURSE DESC:	Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the citizen to the state, (c) the nature of the "good" life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples.

				COURSE DESC:	Explores the relationship between democracy and education from multiple perspectives, including liberal democracy, pragmatist democracy and radical democracy. Critically examines concepts important to a democracy that relate to the distinction between public and private spheres, pluralism, community, individuality and responsibility, for example. Begins with assumption that schools in the U.S. have a significant role in educating for participatory democratic citizens. Examines whether and how our public schools accomplish this aim, or whether they in fact, work contrary to it. Examines pedagogical practices and school as an institution and inquire about their effectiveness in educating for an inclusive and participatory democracy. Examines contemporary and enduring issues in our democracy that are connected to or impact our students, schools and communities.

Ultimately examines the connection between interpretations of the human condition and education.									
EHS	EDST	<b>EDCS</b>	<b>7010</b>	<b>The Social and Cultural Contexts of Leadership</b>	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Examines the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examines leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vets leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership.									
EHS	EDST	<b>EDCS</b>	<b>7020</b>	<b>The Moral and Ethical Dimensions of Leadership</b>	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one's moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives.									
EHS	EDST	<b>EDCS</b>	<b>8010</b>	<b>Critical Cultural Theories &amp; Pedagogies for Empowering Education</b>	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Provides an advanced examination of the relationships between schools and society, focusing predominantly upon critical theory and its derivatives, in order to understand the role of education and schools' unique position within society. Any institution with power has the ability to do good, as well as the power to do harm. Explores empowering pedagogies that emanate from critical theories in order to address the role of power and related concepts in educational institutions and provide pedagogical tools for educators and students to critically examine the implications and consequences of how we educate. Examines the societal, cultural, institutional and personal domains as we inquire into how we might educate all our young people well in the midst of changing social and institutional contexts, power, and resistance.

Teaches how to analyze, implement and evaluate instructional experiences, particularly those delivered through or mediated through digital communication and interaction technology. Reviews how to conduct a needs analysis, task analysis and learner analysis. Will utilize these analysis skills to design instruction. Strategies for instructing declarative, conceptual, procedural, algorithmic knowledge covered. Utilizes strategies to create presentations, practice and feedback systems. These systems require assessment and evaluation to create congruent learning experiences. Skills applicable to any learning situation, however, particular attention paid to mediated environments (computer tutorials, simulations, games, etc.). Each week a component of instructional design is done leading to a final project demonstrating their abilities. Traditional midterm and final examinations are required. 		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: EDRE 7200 and 7500									
		COURSE DESC:		This course provides an introduction of mixed methods research in social and educational sciences to graduate students who are already familiar with quantitative and qualitative research and students who may conduct mixed methods theses/dissertations. Mixed methods research is more than simply collecting both quantitative and qualitative data, and instead, it integrates quantitative and qualitative methods from the research-planning phase to the implementation phase. This course focuses on major characteristics of mixed methods and three basic designs, i.e., convergent parallel design, explanatory sequential design, and exploratory sequential design. It offers individuals a foundation for conducting mixed methods research.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: EDRE 7700									
		COURSE DESC:		The course is designed to enhance students' understanding and application of mixed methods. It focuses on how to design advanced mixed methods projects to achieve complex research objectives. This advanced course is project-based and requires students to complete individual mixed methods projects. This course focuses on the application of mixed methods research and the discussion on three advanced mixed methods research designs in details, i.e., embedded design, transformative design, and multi-phase design.

EHS	EHS	<b>PCOE</b>	<b>2301C</b>	<b>Building Leadership in Adolescent Girls through Mentorship</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students are paired with local area middle school girls and the Ohio University's Women's Center to conduct the Young Women's Leaders Program. If students would like to be paired, they are required to complete both a BCI and FBI background check. Students are responsible to pay this fee. The service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), even though they are no longer enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that enables students to create workshops that can be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course.

		COURSE DESC:		REQUISITE: EDSE 3510 and (Jr or Sr) This course prepares Adolescent-Young Adult teacher candidates with a broad-based understanding of central issues involved in the learning and teaching of science, and the nature of knowledge in science. These concepts are integrated into practical activities designed to prepare the candidates for teaching in actual science classrooms and in the community through the integration of service learning projects. Candidates are expected to design individual lessons and a unit that take into consideration national and state standards, classroom management, student safety, learning theory, assessment, the nature of science, and science in the community. Candidates are also expected to apply accurate science content, inquiry skills, and practices through class/field activities and assignments. As this is a service learning designated C course, students are required to actively participate in and reflect upon meaningful service commitments within the community. Travel to and from service learning sites is necessary and is organized collaboratively through our class. These service learning obligations require out of class time; however, all efforts are made to ensure that scheduling and service options are flexible and meet student professional needs and interests.

				This is an advanced course for those individuals who desire to gain greater knowledge and depth in the complex issues surrounding human learning and development for young children. Content in the course covers the major theories of child development and learning to provide a framework for the presentation of cognitive, social and emotional development for all young children. The course emphasizes factors that influence growth, learning, and development for all young children from birth through age eight. The content describes implementation science, including designing instruction of a high enough intensity to promote positive outcomes for all young children and coaching colleagues and caregivers to interact in positive and intentional manner. Students discuss the classic and current theoretical studies as they relate to human development and what these theories mean for young children with diverse needs. The course has an emphasis on applications and case studies for the home, community, and classroom settings for infants, toddlers, and young children who have and are at risk for developing disabilities.

				This course is designed for practicing teachers interested in developing skills necessary for peer mentoring of induction year teachers. Skills to be addressed include classroom observation, providing constructive feedback, and analysis of all components of the teaching process. Following extensive research and an analysis of the theoretical underpinnings of the teaching and mentoring processes, teachers will develop personalized plans of action in response to self-reflection and mentoring situations. The purpose of this course is to prepare practicing teachers with the tools necessary to successfully support first year teachers in a peer mentoring situation. An analysis of potential strategies will be conducted and foundational skills will be developed and refined/enhanced. This course provides training to potential mentor teachers, increasing the cadre of available mentors thereby building capacity across the nation as the number of new teachers grows and retention continues to be an issue of importance.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 2010 and 3300									
		COURSE DESC:		Materials and properties; design methods, strength of rectangular sections subject to bending moments, axial loads, and shear forces either separately or in combination; continuity in concrete construction; design of one-way slabs; design of T sections in bending; deflection calculations, and footing design.									
ENT	CE	<b>CE</b>	<b>4330</b>	<b>Structural Design in Steel</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3300									
		COURSE DESC:		Materials and properties; design methods, design of tension members; structural fasteners; design of compression members, beams, trusses, and frames.									
ENT	CE	<b>CE</b>	<b>4370</b>	<b>Timber Design</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3300									
		COURSE DESC:		Material properties and behavior of structural timber. Analysis and design of sawed timber and laminated timber members. Timber construction analysis and design.									
ENT	CE	<b>CE</b>	<b>4380</b>	<b>Prestressed Concrete Design</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3300 and CE 4320									
		COURSE DESC:		Theory of prestressing. Design and analysis of prestressed concrete beams, slabs, box girders, and bridge girders by elastic and ultimate strength methods.									
ENT	CE	<b>CE</b>	<b>4450</b>	<b>Flow Routing</b>	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: CE 3420

				This class covers the fundamental concepts, principles of structural modeling, and computer-aided structural design. In this class, each student gains many hours of practical modeling experience using a powerful finite element package widely used by structural engineers. The class first starts with modeling of the common structural components under a variety of loading conditions. Then, the class addresses issues such as how to interpret the model analysis results and how to make design choices. Experiences gained with the software package used should transfer easily to any other structural analysis software package.

		COURSE DESC:		REQUISITE: CHE 2010 and ET 3200									
				This course is designed to introduce the students to particle suspensions and biological interfaces, in which the boundaries play an important role in the physical and chemical properties of the system. As the materials become smaller, more of their total mass becomes part of the interface, thus an understanding of interfacial properties is important in working with suspensions containing small or nano-sized particles. This course provides an understanding of the fundamentals of interfacial behavior in nanoparticle systems and in biological interfaces, with an emphasis on applications.

Fundamentals of DC machinery; circuit models and characteristics of DC motors. Fundamentals of AC machinery; theory and operation of synchronous machines and induction motors.									
ENT	EECS	EE	3973	<b>Electronics II</b>	LEC	LE	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3343									
				COURSE DESC: Continuation of EE 3343. Semiconductor devices. AC-coupled amplifiers. Feedback. Differential amplifiers. Oscillators. Power devices.									
ENT	EECS	EE	4053	<b>Physical and Power Electronics</b>	LEC	LE	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 4313									
				COURSE DESC: Simplified 1-dimensional band theory of solids. Valence and conduction band occupancy from Fermi-Dirac statistics. Hole conduction and doping. Derivation of PN junction volt-amp-temperature characteristic. DC and AC characteristics of junction transistors derived from fundamentals. Application of semiconductor theory to solid state devices. Charge control analysis. Electro-optical effects. Semiconductor devices for the conversion and control of electric power. Device protection.									
ENT	EECS	EE	4143	<b>Design of Digital Circuits</b>	LEC	EL	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 1024									
				COURSE DESC: Digital design of microelectronic circuits, simulation, verification, and specification. Structural design concepts, design tools. VHDL language, data types, objects, operators, control statements, concurrent statements, functions, and procedures. VHDL modeling techniques, algorithmic, RTL, and gate level designs. Introduction to very large scale integration (VLSI) technology and design of CMOS integrated circuits. VLSI fabrication process, design rules, logic design, performance estimation, chip engineering, and computer aids to VLSI design. Emphasis on virtual prototyping, circuit design, optimization, verification, and testing. Design synthesis.

				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 321 or 3223									
				COURSE DESC: Introduction to fundamentals of the light propagation in solid media, passive devices like waveguides and optical fiber. Introduction to important modern active optoelectronic devices. Emphasizes basic physical theory needed to understand LEDs, laser diodes, photodetectors, photovoltaics and their construction and applications.									
ENT	EECS	EE	4323	<b>Solar Cell and Photovoltaics</b>	LEC	LE	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3343									
				COURSE DESC: Introduction to solar cell technology, photovoltaic (PV) systems, with strong focus on energy conversion, photovoltaic technology and applications. Examines basics of solar cell devices and photovoltaic systems; physical models of solar cell operation; design principles of standalone and grid integrated PV systems; topics relevant to increasing solar cell efficiency, and new concepts in PV design. To become proficient in using, operating, and designing PV systems, examples of PV systems are presented and analyzed.									
ENT	EECS	EE	4403	<b>Antenna and Microwave Theory</b>	LEC	EL	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3214									
				COURSE DESC: Fundamental concepts and definitions for radiating systems including parameters, current distributions, matching, polarization and their effect on antenna performance. Transmission links, linear wire, loop, aperture, and array antennas discussed.

				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3334									
				COURSE DESC: Fundamentals of communication system engineering, at the physical layer. Resources available for communication system design. Probability and stochastic processes for communication systems, including noise. Analog communication systems and their performance. Baseband digital communications, carrier modulated digital communications. Basic link budget analysis.									
ENT	EECS	EE	4853	<b>Electronic Navigation Systems</b>	LEC	LE	3	0		N	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3334									
				COURSE DESC: Principles and theory of operation of electronic navigation systems with emphasis on avionics; aircraft instrumentation, VOR, DME, Inertial, ILS, MLS, GPS, and air traffic control.									
ENT	EECS	EE	4900	<b>Special Topics in Electrical Engineering</b>	LEC	LE	1 to 6	6		I	U30		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: Permission required
