| | | COURSE DESC: | | Explores the fundamental roles that law plays in organizing contemporary social life. Considers various ways of understanding law's complex presence: how law shapes and enables routine social interaction, how law constructs differences among people and their actions, how law mediates and enforces power relationships, and how law matters for the kind of societies we have. Our inquiries will examine official legal institutions and actors, but the class will emphasize how law works as a complex array of norms, symbols, discourses, and practices that infuse and shape all aspects of social life, from everyday social interaction to social movements and official legal institutions and actors. The course draws from the U.S. experience as well as historical, international, and transnational perspectives. | | | | | | | | |

| | | COURSE DESC: | | Explores how the interpretation and application of criminal law reflects assumptions about men's and women's natures, appropriate roles, and positions in society. Readings examine changes and stability in the prosecution of violence against women; the prosecution, sentencing, and correction of women offenders; women's and men's access to the profession of law and other legal positions; and conceptions of justice. Readings highlight how race, class, and gender intersect and how structure and interpersonal interaction contribute to observed outcomes. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: This course is an application of the theory underlying financial accounting and reporting and the interrelationships between the different accounting sub-disciplines. Cases and problems are utilized to illustrate contemporary issues related to standard setting and financial statement measurement and reporting topics. Significant and rapid changes in accounting rules affect the financial reporting and analysis that management uses to make business decisions. This course explores contemporary accounting topics that accounting professionals face in the workplace and how the accompanying requirements change the way companies and their business partners use, report, analyze, and interpret financial data. Actual subjects covered vary as conditions change. This course serves as the Capstone Experience for our program. Specifically, this course provides a review of the material covered throughout the program and an opportunity to assess a student's overall learning in the program. | | | | | | | | |

Predictive analytics is a form of analysis that aims to discover trends or patterns within datasets. The mathematical relationships that are found are used to make proactive, future-based, data-driven decisions. Predictive analytics is an important field of study because techniques that are used can find complex relationships that experts may overlook, or may not know at the time of the analysis. This course covers a variety of predictive analytics techniques and theories from the viewpoint of various business applications. To achieve the course learning objectives, students utilize software tools that are commonly used in business to develop, test, and apply continuous, classification and clustering models. | | | | | | | | |

The goal is to utilize these techniques to determine optimal strategies that can improve the results related to business decisions. In this course, students are introduced to concepts related to developing various linear and non-linear models within software tools that are commonly used by business professionals. Students apply optimization techniques to solve problems related to assignment, transportation, and network models as well as investigate other business scenarios that require additional theories such as integer and goal programming. In addition, students develop simulation models and utilize decision analysis strategies for conditions of uncertainty. | | | | | | | | |

| | | COURSE DESC: | | The course is about discovering who a participant is, as a person, and as a leader. During the semester, students are introduced to principle-based leadership, self-discovery and self-awareness. Students are asked to define their principles and values and identify their leadership style. On Stephen Covey's model of The 7 Habits, students recognize how to move from dependency to interdependency, and discover who they are as an individual. Next, students participate in a 2-part intensive career management seminar, which includes career interest inventory and other career management tools. Students then participate in the Big 5 Personality Assessment. Finally the students discover their own authentic leadership approach through the study of True North, taking part in leading sessions with their colleagues. | | | | | | | | |

| | | COURSE DESC: | | The course provides students a complete picture of the strategy of a company integrating knowledge gained in the areas of Strategy, Marketing, Finance and Information Systems. Students apply classroom learning by conducting a situation analysis on the industry and company where they work, analyzing and offering insights on their company's branding and marketing strategies, analyzing financial ratios, seeking new technology applications and offering overall insights into the strategies of functional areas within the company. Accordingly, the course deals with discussing the role of strategy within companies and its impact on informing and guiding important decisions such as resource acquisition, allocation and deployment. Projects are based on real-world situations so that students practice applying tools and frameworks in their own decision-making processes. | | | | | | | | |

| | | COURSE DESC: | | New Venture Planning is designed to engage MBA students in a process of ideation, business model generation, market validation and venture pitching. The course begins by engaging students in a process of ideation. During this step in the process the class is introduced to a range of different ideation techniques and uses them to generate a large number of venture opportunities. Ideas generated go through a screening process and teams are formed around the leading venture ideas as assessed by the class. Teams are then introduced to the business model canvas and then develop initial business models for their ideas. Next, student teams in a "lean launch" process. During this stage teams engage in validation research to confirm and amend their initial business models and provide supporting customer and other validation for their intended approach. Finally, student teams develop their pitches, trade shows, pitch decks and other materials and engage in a "shark tank"-like competition to propose their ventures to prospective investors. The class is a "learning by doing" and "problem-based learning" class. Students are expected to engage on a full-time basis for the duration of the class and the class is designed to give MBA students an accelerator-like experience. | | | | | | | | |

Throughout the course, students compete in a simulation that is based on the manufacturing industry. While competing in this environment, students generate and collect data from the simulated environment. With this data, students are asked to apply a variety of analytics in order to support decisions that are made within the simulation. Students present their analytical findings to their teammates and the team has the option of using the results of the analysis to augment their decisions within the simulated environment. Based on the nature of the simulated environment, students are able to view and reflect upon the results of their strategic and tactical approaches that they took within a competitive business environment. | | | | | | | | |

| | | COURSE DESC: | | Teams are increasingly used in business to tackle more challenging issues that require a diverse set of skills. Strong teams require capable leadership, attention to process, innovative ideas, excellent communication, and an appreciation for different skills and work styles. While much is known about what makes some teams more successful than others, few people are trained in how to effectively create, build, and manage teams. This course focuses on learning and best practices in team formation, working on a team, and leading teams. Throughout the course students use readings, discussion, cases, action learning exercises, and team projects as a platform to dissect common team issues, and the strategies and tactics to overcome these challenges. | | | | | | | | |

| | | COURSE DESC: | | This course is for entrepreneurs building the courage to create, and risk making mistakes in their quests for true innovations in products, services or processes. You will solve problems in uncertain and dynamic environments. Creativity is the central focus, which might be defined as applying your mental ability and curiosity to discover something new, the act of relating previously unrelated things. More specifically, we focus on capitalist creativity. This means that we must apply a Business Model framework to your creativity. We demand that your solutions be profitable (have a potential to be profitable) and reflect bottom-line practicality. More importantly they must create value. We provide challenging places to fully engage your brain to discover patterns to produce breakthrough ideas that solve business problems. | | | | | | | | |

| | | COURSE DESC: | | This course provides real world, hands-on learning on the process of actually starting a company, applying the Lean StartUp methodology. Our goal, within the constraints of a classroom and the time available is to create an entrepreneurial experience with all of the pressures of an early stage start-up. The class is designed to give you the experience of how to work as a team and turn an idea into a company. You will talk to customers, partners and competitors as you encounter the uncertainty of the start-up process. You will practice evidence-based entrepreneurship as you learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than you would want/use your product or service. Finally, based on the customer and market feedback you have gathered, you will use agile development to rapidly iterate your product or concept to build/design something customers would actually buy and use. Completion of this course is necessary for teams who wish to compete for admission to Ohio University's Innovation Engine Accelerator mentoring program, grant and investment funding opportunities via TechGROWTH Ohio and admission to other mentoring and funding opportunities designed to help start ventures at Ohio University. | | | | | | | | |

| | | COURSE DESC: | | This course examines the principles of judgment and choice in the face of uncertainty. Students are introduced to normative (i.e., how best to decide) and behavioral decision making (i.e., how do we decide). The latter approach recognizes that people use various tricks (i.e., heuristics) that simplify cognitive processing. While these serve well in some instances, they may also become traps that lead to poor results in others. Extensive study of bias helps students to recognize these tendencies and become better decision makers following a third approach known as prescriptive decision making (i.e., how should we decide). | | | | | | | | |

| | | COURSE DESC: | | The ability to effectively manage a business includes a complete understanding of the underlying operations and supply chain linkages. This course is designed to equip students with the foundation of theoretical knowledge and skills necessary to understand the core areas of operations management. Toward this end, this course integrates textbook learning (through readings and lectures) with real world examples (through discussion boards and case studies) to provide a full understanding of Operations. The course is also designed to encourage participation in discussion of student's job experiences as they relate to core operations topics. | | | | | | | | |
| | | | | Often we are involved with developing a new system, a new product, planning an event, or participating in an undertaking that we cannot simply repeat things we have done in our past experience. These are 'one-offs' or Projects. Projects are major undertakings that have a defined life time (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration, it is important to understand and appreciate the techniques and concepts used for successful project management. This course covers some of the issues related to projects, working on project teams and tools used for managing projects. | | | | | | | | |

| | | COURSE DESC: | | Organizations are under increasing pressure to be better, faster, and cheaper. This pressure has driven many organizations to adopt process improvement methodologies, like Lean Six Sigma, to increase quality and decrease costs. This course is designed to equip students with the foundation of theoretical knowledge and skills necessary to manage Lean Six Sigma programs. The course integrates basic learning (through readings and lectures) with real world examples. After completing this course, students should understand how to effectively manage and navigate a process improvement program. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC2: A-F, PR | | | | | | | | |
| | | COURSE DESC: | | An introductory survey of ideas theorizing the relationships between rhetoric and public culture. Since many of these ideas offer critical and analytic perspectives, students will also learn how to engage in critical analysis of the relationships between rhetoric and public culture. Likely theories/theorists include: Kenneth Burke, Mikhail Bakhtin, Michel Foucault, Antonio Gramsci, Jergen Habermas, cultural studies, post-colonial studies, feminist studies, and postmodernism. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | This rhetorical methods class explores narrative approaches to rhetorical criticism. "Narrative" is construed broadly to encompass methods that view rhetorical transactions as dramatic events or as story-telling. Examples of narrative approaches to rhetorical criticism include Kenneth Burke's dramatic approach, Ernest Bormann's rhetorical vision/fantasy theme analysis, or Walter Fisher's narrative perspective. These approaches tend to construe rhetorical discourse as involving heroes/villains (protagonist/antagonist), conflict, and events (a plot). | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | The course offers an in-depth study of the theoretical underpinning and methodologies in specific techniques of rhetorical criticism. Although the specific rhetorical scholar or school of rhetorical scholars will vary by instructor, each seminar will engage the interdisciplinary dimensions of a specific technique of criticism of rhetorical interactions. | | | | | | | | |

Performance is approached as method, experience, metaphor, and subject of analysis. The course is both conceptual and practical. It introduces students to key concepts in performance theory such as ritual, identity performance, culture, play, performativity, performing, performance texts, and performance process. Students gain experiential training in performance ethnography, ethnography of performance, autobiographical performance, autoethnographic performance, social justice organizing and performance, and performative writing. This training is accomplished through exercises in textual, aural, performative, material, poetic, and other sense-based representation of performance and everyday life. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: This course covers measurement of quantitative data and the preliminary analyses required before conducting the substantive analysis of hypotheses and research questions. The measurement portion of the course focuses on decision making and techniques for producing and working with quantitative data, focusing in particular on conceptualizing and operationalizing quantitative variables. Students will explore statistical techniques for assessing measurement including reliability and exploratory factor analyses. The preliminary analysis portion of the course explores issues such as data cleaning, diagnosis and resolution of missing data issues, item-level analyses, forming multi-item scales, transformation, and evaluating confounds and covariates. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: This course provides an introduction to the quantitative research method of moderation and mediation. A moderator variable is one that influences the strength of a relationship between two other variables, and a mediator variable is one that explains the relationship between the two other variables. This course is both conceptual and analytical. Students learn how to theoretically propose moderation analyses vs. mediation analyses and how to rationalize one approach over the other. Students also practice moderation and mediation through multiple regression and simple path analyses techniques (SPSS, PROCESS, and AMOS). | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC2: A-F, REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course introduces students to major works in the study of rhetoric, popular culture, and their relationship. It assumes that forms of popular culture (e.g., popular music, advertising, television programming, popular novels, etc.) are social artifacts that serve an important persuasive function in society. Popular culture provides conceptual and practical frameworks that orient individuals to the world. Thus, this course will help graduate students to develop a set of theoretical, methodological, and analytical resources for researching and interpreting the persuasive functions of popular culture in specific historical and geographical contexts. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC2: A-F, REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course examines the creation of meaning in verbal and graphic texts in speech, print, and electronic environments, with emphasis on the cultural significance of various communication technologies. In addition to discussions of theory, the course includes hands-on explorations of electronic examples (including radio, cell phones, games, and Internet applications), especially in contrast to print and speech, and consideration of social, economic, and technical dimensions of mediated culture. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC2: A-F, REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course will begin with an examination of what it means to 'write women into the history of rhetoric'. This examination will provide the backdrop for an initial historiographical approach to women's contributions to rhetorical theory. Beyond this initial focus, the course will examine recent developments in feminist theory that impinge on or work from an understanding of rhetoric. As such, the course cuts across both historical and theoretical boundaries mapping the space for a feminist rhetoric. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course surveys examples of American rhetoric, broadly construed to include rhetorical traditions of native peoples before European contact as well as genres of public address and other rhetorical forms in many media across the political, social, and media history of the United States. The communication discipline's critical approaches to the various ideological, regional, and demographic traditions of American rhetoric are central to the course. Students gain a foundation for research in both historical and contemporary American rhetoric, especially as manifestations of the ancient rhetorical principle of kairos--appropriateness to time, place, and circumstances. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course addresses the convergent aims of rhetoric and cultural studies, viewing both traditions as theoretical invitations to political and cultural critique. It acknowledges the rich and contested histories of both intellectual traditions and engages modes of inquiry that attend to matters of culture, identity, representation, power, ideology, and democracy as they implicate and intersect with our understandings of communicative practices and behaviors. Through the course, students become familiar with the common influences and divergent histories of rhetoric and cultural studies so that they may more productively engage in scholarship that contributes to the critique of public culture. Topics vary. Students may repeat the course for a total of 12 credits. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC2: A-F, REQUISITE: PR | | | | | | | | |
| | | COURSE DESC: | | The purpose of this course is to examine the influence of culture on communicative aspects of patient and public health. The course explores theories of communication medical anthropology, and health education to understand the conceptual foundations of intercultural health. The course analyzes how peoples' health beliefs play out in interactions with patients and providers, and examines how public health strategies can be designed for specific cultural contexts. The larger purpose of this course is to train graduate students to communicate more effectively with patients, providers, and the public in multicultural health care settings. | | | | | | | | |

| | | COURSE DESC: | | This course focuses on the processes through which attitudes, beliefs, and behaviors are shaped, reinforced, and changed via communication. The course provides a survey of theories and research in persuasion as well as analysis of contemporary examples of persuasive communication. | | | | | | | | |
| COM | COMS | COMS | 8470 | Communication and Uncertainty in Health and Illness | Seminar | 4 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC2: A-F, REQUISITE: PR | | | | | | | | |
| | | COURSE DESC: | | Uncertainty is common in diagnosis, prognosis, and treatment for many illnesses, and in relationships among patients, care providers, and family members, where illnesses experiences are addressed. Communication is a source of illness-related uncertainty, a resource for dealing with such uncertainty, and most generally the medium through which the presence and meanings of uncertainty are constructed. This course examines the nature of illness-related uncertainty, and theory and research on communication and uncertainty related to instrumental, identity, relational, and affect management; it examines these issues in contexts such as health information seeking, health screening and genetic testing, diagnosis and medically unexplained symptoms, treatment decisions, including end-of-life care, and social support. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course focuses on how we communicatively construct and affect the environment. Students analyze and critique a wide range of voices (e.g., citizen and community groups, Greens, corporations and lobbyists, scientists, anti-environmentalists, public officials and regulators, journalists) on a variety of environmental disputes. Students learn about environmental decision making and conflict resolution, advocacy, climate and environmental justice movements, science communication, and risk communication in the context of current environmental issues. The course is designed to accommodate primarily communication studies doctoral students, but it reviews foundational theories in sufficient detail to equip students from other programs to participate effectively. The course equips students to conduct original research on environmental communication and to engage in activism as appropriate to interests and exigencies. | | | | | | | | |

Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students with little or no scripting experience. The process of breaking down a problem into steps that can be automated is introduced. Students work in a drag-and-drop scripting environment to practice this process before moving to the python scripting language. Throughout the course students focus on creating useful solutions across a number of disciplines. | | | | | | | | |

Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students who have some prior experience with scripting. Students without this experience should take ITS 1801 first. In this course, python is used to develop solutions to practical problems across various disciplines. Throughout the course, best practices for code version management using git are introduced. In the second half of the semester, students have the option to expand beyond python to learn scripting in either bash or PowerShell. | Lecture | 3 | 0 | | N | U30 | | 0 |

| | | COURSE DESC: | | The course examines the impact of surveillance enabled by communication and information technologies on the ability of individuals to maintain private spaces. Students evaluate theories of privacy and surveillance, surveillance technologies, the contours of national and global surveillance systems, and laws and policies that regulate those systems. Students apply ethical frameworks to assess surveillance technologies and their impact on privacy. Students examine surveillance-related technologies such as mobile phones, drones, the World Wide Web, social media, predictive algorithms, and the Internet of Things. Government surveillance technologies and systems such as those revealed by Edward Snowden and Wikileaks are also covered. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: C or better in (ITS 2300 or 330) Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process. | | | | | | | | |

| | | COURSE DESC: | | The course examines the impact of surveillance enabled by communication and information technologies on the ability of individuals to maintain private spaces. Students evaluate theories of privacy and surveillance, surveillance technologies, the contours of national and global surveillance systems, and laws and policies that regulate those systems. Students apply ethical frameworks to assess surveillance technologies and their impact on privacy. Students examine surveillance-related technologies such as mobile phones, drones, the World Wide Web, social media, predictive algorithms, and the Internet of Things. Government surveillance technologies and systems such as those revealed by Edward Snowden and Wikileaks are also covered. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: ITS 6250 Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process. | | | | | | | | |

| | | COURSE DESC: | | Examines the effects of the "information age" on women's lives. Telephones, computers, and the Internet have revolutionized the way people work and live. These technologies have affected men and women differently, however. Discusses the information age and its impact on domestic and work life. It pays special attention to the relationship between women and two of the main information technologies: the telephone and the computer. The objective is to explore the ways in which these technologies have been "gendered". Also examines the role of women in relation to the telegraph, the typewriter, video games, the Internet, and other communication and information technologies. | | | | | | | | |

| | | COURSE DESC: | | Focus on the schools of thought that have shaped the study of media throughout the 20th century, and the theories that have laid the foundation for media studies in the 21st century as they relate to television, radio, film, music, the Internet, and video games. Talk about these theories in relation to the contexts in which they were developed and the research methodologies that adopted them. As we appreciate the interdisciplinary nature of media studies, we will also have to consider what distinguishes our field from others: what constitutes a medium? What is communication? What is "theory" and what good is it to theorize the media? | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | | | | | |
| | | COURSE DESC: | | Contemporary American Documentary looks at contemporary issues in American life through the work of distinguished non-fiction filmmakers. Documentaries dealing with all aspects of American society are screened and discussed. Politics, race, poverty, religion, big business and war are among the issues dealt with. The aim of this course is to illuminate and examine the issues, and to develop critical viewing skills so that students become savvy consumers of such media. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | Soph or Jr or Sr | | | | | | |
| | | COURSE DESC: | | Investigates the construction of nonfiction film and televisual documentary imagery, from the inception of motion pictures (ca 1895) through the current postmodern American landscape. In the course, a representative sampling of the documentary film canon by historical figures is screened, which will assist in gaining understanding of the contemporary context within which these documentary constructions were assembled. Because this course is taught within the School of Telecommunications, the second part of the course necessarily moves toward examining the influences American network television, cable, and video technology have had on the form. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | | | | | |
| | | COURSE DESC: | | Examines the ways Information and Communication Technologies (ICTs) are being used to bring about social change. In an age when digital networks and social media interlink individuals, groups and community organizations, students are asked to research, write about, and discuss the role played by the Internet, wireless media, fiber optics, satellites and digital devices in the empowerment of citizens. Historical, economic, cultural, and programmatic analysis of case studies will be used as a basis for understanding theory. | | | | | | | | |

| | | | | Digital transformation is an example of the need for businesses to innovate and change as the market and consumer desires evolve. As opportunities and risks are identified, organizations need the ability to transform business models or processes to account for digital media technology and economic shifts; and develop creative, innovative digital media products or services to adapt to evolving audience or user demands. This course is devoted to the theories and best practices that enable developing and sustaining an organizational culture of continuous digital media transformation and innovation. Particular attention is given to communicating effectively within and across groups, teams, organizational units, and external communities; building trust both within a creative media organization and with external constituencies; and the fundamentals of assessing readiness for digital media transformation. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | Provides an overview of the communication and development field and serves as a foundation for the subsequent in-depth study and analysis of specific aspects of the role of communication in development and social change. Explores the complex relationships between communication and human and social development, and the role that communication plays in promoting (or impeding) social change and development. Throughout the seminar participation, collective research and teamwork are emphasized, and participants are expected to undertake both individual and group projects. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers. | | | | | | | | |

| | | COURSE DESC: | | This course serves as one of the three core courses required for students in the Communication and Development Studies graduate program during their first semester. It introduces "Comm Dev" students to basic principles associated with conducting graduate level research, with some focus on key research considerations related to the field of Communication for Development. With that in mind, the course covers critical elements necessary for conducting graduate-level, scholarly research more generally, including identifying a research topic; accessing scholarly research; writing a literature review; and research ethics. The students are also introduced to research design, and to qualitative and quantitative methodological approaches to collecting and analyzing data. At the same time, methodological elements that help define Communication for Development as an academic and professional field serve to further inform readings, lectures, and discussions. Course topics with this relatively more specific programmatic focus include monitoring and evaluation; rapid appraisal methods (e.g. mini-surveys, transect walks, and community mapping); and participatory methods (e.g. focus groups and community discussions). | | | | | | | | |

| ELIGIBLE GRADES: | | | | GEC4: A-F, REQUISITE: CR, PR | | | | | | | | |
| COURSE DESC: | | | | Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the citizen to the state, (c) the nature of the "good" life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples. | | | | | | | | |

Examples of philosophers range from John Dewey to Alaine Locke to Maxine Greene and bell hooks who address the educational realm directly. Other philosophers who include educational philosophy in their general bodies of work include those such as Plato, Rousseau, Wolfe, Rorty and Foucault, among others. Potentially every philosophical school of thought from Ancient Greek philosophy to Existential philosophy to Postmodern and Post-Colonial philosophy can be studied for its educational implications. Each semester offering will select from among possible schools of philosophical thought and/or movements, as well as choosing from among specific philosophical thinkers. | | | | | | | | |

| COURSE DESC: | | | | Education is not a neutral endeavor. It is both a societal enterprise and a localized social activity; as such, it is embedded in an ever changing socio-cultural context. Taken seriously, these two ideas point our attention to several sociological and political questions about education such as, What is the purpose of education? Who benefits from education as it is constituted? Who decides curriculum, structure, funding, etc.? What are the implications for any given educational setting? Who is marginalized by the way we "do" education in the U.S. context? What does educational change look like? Is change possible in U.S. schools, and if so, in what manner? Critically examines the complex interactions of societal structures and political ideologies as they intersect, influence and impact educational realities in U.S. public schools. | | | | | | | | |

| ELIGIBLE GRADES: | | | | GEC2: A-F, REQUISITE: PR | | | | | | | | |
| COURSE DESC: | | | | Explores the relationship between democracy and education from multiple perspectives, including liberal democracy, pragmatist democracy and radical democracy. Critically examines concepts important to a democracy that relate to the distinction between public and private spheres, pluralism, community, individuality and responsibility, for example. Begins with assumption that schools in the U.S. have a significant role in educating for participatory democratic citizens. Examines whether and how our public schools accomplish this aim, or whether they in fact, work contrary to it. Examines pedagogical practices and school as an institution and inquire about their effectiveness in educating for an inclusive and participatory democracy. Examines contemporary and enduring issues in our democracy that are connected to or impact our students, schools and communities. | | | | | | | | |

| ELIGIBLE GRADES: | | | | GEC4: A-F, REQUISITE: CR, PR | | | | | | | | |
| COURSE DESC: | | | | Examines how educational systems are situated within the context of culture, knowledge, the economy, media and power. Utilizing interdisciplinary sources, explores the relationship between school and society with interpretive, normative, and critical theories and methods. Applies critical and cultural theories to deconstruct the socio-cultural influences and hegemony acting upon and utilizing education; the implications of those factors on the purposes of education, how we educate, foster student engagement and create successful learning communities in school and beyond will be examined. Attention given to contemporary dimensions and dynamics that intersect and impact education today, i.e., youth culture, marginalized voices, and popular media and culture. Examines several alternative theoretical and pedagogical approaches that have the potential to more closely fulfill the democratic 'promise' that education can indeed, make a difference in individual lives and create more socially just people, schools, communities and world. | | | | | | | | |

| | | COURSE DESC: | | Examines the historical and contemporary issues of diversity in education. Schools and classrooms do not exist in a socio-political vacuum. Premised on how education has been and continues to be a site, if not a tool, for power and privilege as well as resistance and social justice. In addition to leading students through a self-examination of their own assumptions and beliefs surrounding diversity, explores historical events and legal cases related to diverse students in schools; theories of identity and culture and how these theories impact constructions of diversity and multicultural education; and strategies for effectively engaging issues of diversity in educational contexts. Offers an opportunity to engage in diversity education in the larger community through a service learning experience. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC4: A-F, REQUISITE: CR, PR | | | | | | | | |
| | | COURSE DESC: | | Examines the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examines leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vets leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC4: A-F, REQUISITE: CR, PR | | | | | | | | |
| | | COURSE DESC: | | Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one's moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives. | | | | | | | | |

| | | COURSE DESC: | | Provides an advanced examination of the relationships between schools and society, focusing predominantly upon critical theory and its derivatives, in order to understand the role of education and schools' unique position within society. Any institution with power has the ability to do good, as well as the power to do harm. Explores empowering pedagogies that emanate from critical theories in order to address the role of power and related concepts in educational institutions and provide pedagogical tools for educators and students to critically examine the implications and consequences of how we educate. Examines the societal, cultural, institutional and personal domains as we inquire into how we might educate all our young people well in the midst of changing social and institutional contexts, power, and resistance. | | | | | | | | |

Reviews how to conduct a needs analysis, task analysis and learner analysis. Will utilize these analysis skills to design instruction. Strategies for instructing declarative, conceptual, procedural, algorithmic knowledge covered. Utilizes strategies to create presentations, practice and feedback systems. These systems require assessment and evaluation to create congruent learning experiences. Skills applicable to any learning situation, however, particular attention paid to mediated environments (computer tutorials, simulations, games, etc.). Each week a component of instructional design is done leading to a final project demonstrating their abilities. Traditional midterm and final examinations are required. | | | COURSE DESC: | | In this course, students learn about the historical and theoretical underpinnings of qualitative methodology. Students utilize the three primary methods of data collection in qualitative research: documents, interviews and observations. Students examine the different theories, sampling strategies, analysis and research designs employed in qualitative methodology. Students design a qualitative inquiry project and explore how to ensure credibility and trustworthiness in the findings of their research. Finally, ethics, CITI and IRB protocols are addressed. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | This course provides an introduction of mixed methods research in social and educational sciences to graduate students who are already familiar with quantitative and qualitative research and students who may conduct mixed methods theses/dissertations. Mixed methods research is more than simply collecting both quantitative and qualitative data, and instead, it integrates quantitative and qualitative methods from the research-planning phase to the implementation phase. This course focuses on major characteristics of mixed methods and three basic designs, i.e., convergent parallel design, explanatory sequential design, and exploratory sequential design. It offers individuals a foundation for conducting mixed methods research. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | | | | | |
| | | COURSE DESC: | | Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students have the opportunity to be paired with local area middle school 7th and 8th graders and Ohio University's Women's Center to conduct the Young Women's Leaders Program. This program has a gendered focus in looking at the experiences of women but is open to anyone who believes they would benefit from a program with that lens. If students would like to be considered as a mentor, they are required to complete both a BCI and FBI background check. The fee for this totals \$62 and should be paid for by the student. Additionally, the service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), though they will no longer be enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that will enable students to create workshops that may be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course. | | | | | | | | |

| | | COURSE DESC: | | This course is a professional development workshop comprised of three modules that focus on the role of mentoring during teacher preparation and induction. Development of pre-service teachers and beginning teachers is addressed from the Professional Internship through the Resident Educator Experiences. The Continuum of Teacher Development and Ohio's Seven Standards for the Teaching Profession for P-12 educators are referenced. This course cannot be used toward any Ohio University degree. | | | | | | | | |
| EHS | EHS | PCOE | 5903 | Mentor Quality Matters: Mentoring Teacher Candidates | Lecture | 1 | 99 | | N | G40 | | 0 |
| | | ELIGIBLE GRADES: | | GEC5: CR, | REQUISITE: | | | | | | | |
| | | COURSE DESC: | | During this workshop, current P-12 teachers examine various approaches to mentoring early field experience preservice teacher candidates. Discussions address topics such as planning and goal setting, getting teacher candidates involved and engaged with the students and their instruction, and encouraging reflection. Finally, special attention is given to the utilization of teacher candidates to increase instructional opportunities for students and personal growth opportunities for teachers. At the completion of the 15 clock hours of on-line facilitated learning and assignments of the workshop, participants receive a Certificate of Completion and 1 semester hour of graduate credit. This course cannot be used towards any Ohio University degree requirements. | | | | | | | | |

| | | COURSE DESC: | | This professional development workshop is designed for P-12 teachers working with students and families who have experienced trauma and substance abuse. The modules focus on the role of teachers in recognizing warning signs of substance abuse, implementing prevention efforts, promoting social/emotional learning competencies (SEL) in the classroom, and helping students develop individual and relational resources. This module compliments the HOPE (Health and Opioid Prevention Education) curriculum funded by the Ohio Department of Higher Education and developed by health educators and classroom teachers. At the completion of the 15 clock hours of online facilitated learning and assignments, participants receive a Certificate of Completion and one semester hour of graduate credit. This workshop cannot be used toward any Ohio University degree requirement. | | | | | | | | |

This course is intended for multiple licensure bands and content areas. This course emphasizes techniques for using reading and writing as tools for the acquisition of new content in any given discipline. The area of general literacy skills, prior knowledge of content, content-specific literacy skills and understanding of the nature of reading instruction in secondary schools are concepts stressed in the class. In addition, concepts including ESL/ELL teaching and learning theories, various methods and techniques of ESL/ELL instruction are discussed. For teachers working on an elementary, middle childhood and intervention specialist license, this course also emphasizes the foundations of reading and reading instruction including emergent literacy, word recognition, phonics, fluency, vocabulary, and comprehension. | | | | | | | | |

| EHS | TEDU | ECEE | 3120 | Using Reading Assessments to Inform Instruction GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, ECEE 3003 concurrent COURSE DESC: This course focuses on the central question, "How does assessment inform instruction?" The course focuses on a wide variety of reading assessments and programs for use at the P-5 level. Topics include interpreting standardized and informal assessment results, identifying authentic assessments that provide multiple indicators of student progress, analyzing assessment tools, and creating appropriate instruction to enhance reading strengths and needs of all learners. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 3300 | Methods of Teaching Mathematics for Early Childhood and Elementary Education GEC1: A-F REQUISITE: EDTE 2000, 2010, 2020 concurrent and advanced standing in education and 2.75 GPA COURSE DESC: This course focuses on research-based approaches to teaching mathematics to elementary age children. Students plan and enact mathematics lessons in their field placement and reflect on their teaching. There is a strong emphasis on identifying and building on children's home, community, and mathematical strengths; on understanding the relationship between mathematics, children's lives, and real-world issues; and on supporting children in making sense of mathematical ideas through problem solving and discussion. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 3400 | Methods for Teaching Early Childhood and Elementary Science GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and ECEE 3002 concurrent COURSE DESC: This course is designed to prepare early childhood and elementary education teacher candidates with the knowledge, skills, and dispositions that provide the foundation for effective science teaching. It develops teacher candidates' abilities to design inclusive and culturally responsive learning environments based on current perspectives about student learning and using evidence-based strategies for teaching and assessment. It also emphasizes scientific inquiry, core ideas, and cross-cutting concepts as recommended by the Ohio Learning Standards for Science and the Next Generation Science Standards for grades P-5. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 3500 | Methods of Teaching Early Childhood and Elementary Social Studies GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and ECEE 3002 concurrent COURSE DESC: This course focuses on developing curriculum and instructional practices that support social studies learning from preschool to fifth grade. Course emphasis is placed on identifying and practicing approaches and instructional strategies that prepare children to be aware, engaged, and involved citizens within a democratic society. Through the use of literature, discussion, inquiry and democratic processes, this course presents the prospective elementary and early childhood teacher with approaches to content and relevant instructional approaches for supporting and extending social studies learning in preschool-grade 5 classrooms. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 3610 | Guidance and Classroom Management GEC1: A-F REQUISITE: (Teacher Candidacy and admission to PK Internship) or (Child Development major) or (Family & Consumer Science Major) COURSE DESC: This course focuses on the principles and methods of guiding students in classroom settings. Teacher candidates explore the connection between child development, environmental factors, and family diversity. Emphasis is on understanding strategies to develop positive and supportive relationships with students preschool through 5th grade. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 3801 | Play & Creativity in Early Childhood & Elementary School GEC1: A-F REQUISITE: Teacher Candidacy, ECEE 2001 concurrent and (admission to Early Childhood and Elementary Education program or Child Development major) COURSE DESC: This course provides students with the opportunity to explore the creative process and learn about developing and implementing curriculum in the areas of art, movement, music, language, literacy, logic, and dramatic play in grades PK-5. Creative thinking and problem-solving is also discussed. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 4100 | Family, School and Community Collaboration GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and (ECEE 3003 concurrent or Child Development major) COURSE DESC: This course provides the knowledge necessary to understand how children are affected by the ecology of the family, school and community. It stresses the importance of the parent-teacher relationship in the school and partnership among family, school and community. It discusses various strategies for working effectively with family and community when teaching early childhood and elementary classrooms in PreK to 5th grade. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 4200 | Philosophy and Theories of Child Development and Education GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and (ECEE 3002 or 3003 concurrent) COURSE DESC: The purpose of this course is to learn how to write effectively in any context or medium while investigating current models, issues, and trends in early childhood and elementary education. Students use technology to support writing across a broad range of topics as they synthesize philosophies and theories of child development. Twenty-five percent of this course focuses on developing writing in a writing intensive format. | Lecture | 3 | 0 | 1JE | N | U30 | | 0 |
| EHS | TEDU | ECEE | 4300 | Authentic Assessment for Early and Elementary Education GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and (ECEE 3002 or 3003 concurrent) COURSE DESC: Authentic assessment examines the realm of student evaluation in all forms. This includes furthering understanding about formal and informal assessments, report cards, standardized testing, portfolios, rubrics, performance tasks, student-prepared data notebooks, and conferencing with families/caregivers, other teachers, and support staff. The purpose of assessment related to preparing for referral of a student for an exceptionality is also examined. | Lecture | 3 | 0 | | N | U30 | | 0 |
| EHS | TEDU | ECEE | 4400 | Actively Engaging and Teaching with Literature and Storytelling Across Content Areas GEC1: A-F REQUISITE: Advanced Standing, 2.75 GPA, and (ECEE 3003 concurrent or Child Development major) COURSE DESC: This course introduces candidates to a wide variety of diverse literature appropriate for use with P-5 learners. Candidates learn how to actively engage students across grade levels and content areas with texts of various styles, genres, and purposes and develop instruction that meaningfully incorporates storytelling, listening, speaking, reading, writing, and viewing. | Lecture | 3 | 0 | | N | U30 | | 0 |

| | | COURSE DESC: | | This course develops students' knowledge, skills, and dispositions for the teaching profession in a changing world, including the skills to systematically design, implement, evaluate, and reflect on secondary school teaching and learning to support higher order thinking abilities among children. It addresses the standards and competencies required for teacher licensure, including alignment of various instructional methods (e.g., direct instruction, cooperative learning, and effective classroom management) with theories of learning, motivation, and affect. It also addresses differentiation of content and instruction and the importance of collaboration with guardians, community members, and other education professionals to support all students through an early field experience. | | | | | | | | |

It addresses state and national standards (e.g., horizontal and vertical articulation, cognitive demand, and content-specific practices), describes various assessment formats and tools, and discusses the role that assessment plays in curriculum, teaching, and learning. Special emphasis is placed on the use of assessment data to inform instruction and the implementation of cycles of planning, teaching, assessing, and reflecting centered on student learning. The course situates assessment within the larger socio-political context and discusses legal and practical implications for students, teachers, and schools (e.g., standardized assessments, report cards, teacher evaluation systems, and induction years assessments). | | | | | | | | |

| | | COURSE DESC: | | This course prepares Adolescent-Young Adult teacher candidates with a broad-based understanding of central issues involved in the learning and teaching of science, and the nature of knowledge in science. These concepts are integrated into practical activities designed to prepare the candidates for teaching in actual science classrooms and in the community through the integration of service learning projects. Candidates are expected to design individual lessons and a unit that take into consideration national and state standards, classroom management, student safety, learning theory, assessment, the nature of science, and science in the community. Candidates are also expected to apply accurate science content, inquiry skills, and practices through class/field activities and assignments. As this is a service learning designated C course, students are required to actively participate in and reflect upon meaningful service commitments within the community. Travel to and from service learning sites is necessary and is organized collaboratively through our class. These service learning obligations require out of class time; however, all efforts are made to ensure that scheduling and service options are flexible and meet student professional needs and interests. | | | | | | | | |

| | | COURSE DESC: | | This course builds on the foundational knowledge acquired in undergraduate children's literature courses to focus on diversity in literature for P-12 students. Understanding the components of children's literature (e.g., genre, voice, character development), students in this course critically evaluate their knowledge and use of diverse literature with P-12 students. Students learn more about the diversity that does (and does not) exist in literature for young students, and read and evaluate literature that brings attention to diversity of race, ethnicity, religion, gender identity, sexual identity, socioeconomic status, familial status, ability, and mental health. | | | | | | | | |

| | | COURSE DESC: | | This course focuses on materials, methods, and techniques of secondary reading instruction for teaching adolescent learners of various abilities. Emphasis is placed on diagnosis of reading difficulties and adaptation of materials and teaching methods for content area instruction. Candidates are required to complete 35 hours of field work with a student in grades 7-12 as part of this course. This course is reserved for candidates in the Master's of Reading Education and Reading Endorsement programs only. | | | | | | | | |

| | | COURSE DESC: | | This is an advanced course for those individuals who desire to gain greater knowledge and depth in the complex issues surrounding human learning and development for young children. Content in the course covers the major theories of child development and learning to provide a framework for the presentation of cognitive, social and emotional development for all young children. The course emphasizes factors that influence growth, learning, and development for all young children from birth through age eight. The content describes implementation science, including designing instruction of a high enough intensity to promote positive outcomes for all young children and coaching colleagues and caregivers to interact in positive and intentional manner. Students discuss the classic and current theoretical studies as they relate to human development and what these theories mean for young children with diverse needs. The course has an emphasis on applications and case studies for the home, community, and classroom settings for infants, toddlers, and young children who have and are at risk for developing disabilities. | | | | | | | | |

| EHS | TEDU | EDTE | 6110 | Supervision of Instruction GEC4: A-F, REQUISITE: CR, PR This course is designed for practicing teachers interested in developing skills necessary for peer mentoring of induction year teachers. Skills to be addressed include classroom observation, providing constructive feedback, and analysis of all components of the teaching process. Following extensive research and an analysis of the theoretical underpinnings of the teaching and mentoring processes, teachers will develop personalized plans of action in response to self-reflection and mentoring situations. The purpose of this course is to prepare practicing teachers with the tools necessary to successfully support first year teachers in a peer mentoring situation. An analysis of potential strategies will be conducted and foundational skills will be developed and refined/enhanced. This course provides training to potential mentor teachers, increasing the cadre of available mentors thereby building capacity across the nation as the number of new teachers grows and retention continues to be an issue of importance. | Seminar | 3 | 0 | | N | G50 | | 0 |

| | | | | This class covers the fundamental concepts, principles of structural modeling, and computer-aided structural design. In this class, each student gains many hours of practical modeling experience using a powerful finite element package widely used by structural engineers. The class first starts with modeling of the common structural components under a variety of loading conditions. Then, the class addresses issues such as how to interpret the model analysis results and how to make design choices. Experiences gained with the software package used should transfer easily to any other structural analysis software package. | | | | | | | | |
| ENT | CE | CE | 5400 | Deterministic Approaches in Water Resources | Lecture | 3 | 0 | | N | G50 | | 0 |

| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | CE 3420 | | | | | | | | |
| | | | | Flood routing and overland-flow theory. Parametric hydrology, linear and nonlinear analysis of rainfall-runoff systems, unit and instantaneous unit hydrograph. Conceptual models for hydrologic watershed. | | | | | | | | |
| ENT | CE | CE | 5410 | Stochastic Hydrology | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | CE 3420 | | | | | | | | |
| | | | | Probability distributions applicable to hydrologic events; analysis of extremes, floods, and droughts; statistical associations between hydrologic variables. Analysis of hydrologic time series. Spectral and parametric formulation of stochastic models of precipitation, runoff, precipitation-runoff transfer. | | | | | | | | |
| ENT | CE | CE | 5420 | Applied Hydraulics & Hydrology | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | Flow and pressure distribution in multi-loop networks, dynamics of flow in pumps and turbines, uniform and nonuniform flow in open channels, culvert hydraulics, hydrologic cycle, groundwater flow, surface flows, and water storage. | | | | | | | | |
| ENT | CE | CE | 5430 | Open Channel Hydraulics | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | Principles of uniform and varied flow. Channel design for uniform flow, gradually varied flow profiles, channel transitions, hydraulic jumps, flow in prismatic and nonprismatic channels. | | | | | | | | |
| ENT | CE | CE | 5450 | Design of Hydraulic Structures | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | CE 3420 | | | | | | | | |
| | | | | Design flood peaks, flood hydrograph, spillway, penstock, and river channel regulation. | | | | | | | | |
| ENT | CE | CE | 5510 | In-Situ Remediation | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | Students will learn about the regulatory aspects of site remediation work, chemical & physical behavior of common groundwater and soil pollutants, different (chemical, biological, physical) mechanisms for remediation, and a survey of the proper use of various remediation techniques. Students will perform preliminary designs using several remediation methods. | | | | | | | | |
| ENT | CE | CE | 5530 | Solid & Hazardous Waste Management | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | CE 3530 or equivalent or permission | | | | | | | | |
| | | | | Identification, classification, and study of methods of characterization, handling, treating, managing, and disposal of solid/hazardous wastes regulated under federal and state guidelines and legislation, site remediation, green chemistry. | | | | | | | | |
| ENT | CE | CE | 5540 | Sustainable Construction | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | Investigations into green building construction practices and sustainability including use of novel or recycled materials, energy management and efficiency, water use/re-use, and indoor air quality. | | | | | | | | |
| ENT | CE | CE | 5570 | Water Resources Engineering | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | A civil engineering course designed to provide integrated treatment of water resources engineering, including hydrological measurements, runoff, groundwater, water law, reservoir design, frequency analysis, planning, flood control. Systems approach to multipurpose water resource projects emphasized. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | This course is designed to introduce the students to particle suspensions and biological interfaces, in which the boundaries play an important role in the physical and chemical properties of the system. As the materials become smaller, more of their total mass becomes part of the interface, thus an understanding of interfacial properties is important in working with suspensions containing small or nano-sized particles. This course provides an understanding of the fundamentals of interfacial behavior in nanoparticle systems and in biological interfaces, with an emphasis on applications. | | | | | | | | |

| | | COURSE DESC: | | This course is designed to introduce the students to particle suspensions and biological interfaces, in which the boundaries play an important role in the physical and chemical properties of the system. As the materials become smaller, more of their total mass becomes part of the interface, thus an understanding of interfacial properties is important in working with suspensions containing small or nano-sized particles. This course provides an understanding of the fundamentals of interfacial behavior in nanoparticle systems and in biological interfaces, with an emphasis on applications. | | | | | | | | |

| | | COURSE DESC: | | This course is intended to serve as an elective for upper-level undergraduate students in computer science and electrical engineering, and for graduate students in computer science, and electrical engineering. It covers selected up-to-date topics in computer security, including defining threats to computer and network systems, evaluating the relative risks of these threats, and the development of cost-effective countermeasures. | | | | | | | | |
| | | | | The course discusses basic principles that appear repeatedly as themes, including those related to authentication and access control, particularly in the context of operating systems and other computing applications. Different approaches to meeting computer security requirements, as well as increasingly important security standards are covered. This course has a special focus on low-level fundamentals of the Security Discipline such as the mathematical basis for Cryptography. This is accompanied by a series of real-world applications and hands on programming assignments. | | | | | | | | |

| | | COURSE DESC: | | REQUISITE: This course is intended to serve as an elective for upper-level undergraduate students in computer science and electrical engineering, and for graduate students in computer science, and electrical engineering. It covers selected up-to-date topics in computer security, including defining threats to computer and network systems, evaluating the relative risks of these threats, and the development of cost-effective countermeasures. The course discusses basic principles that appear repeatedly as themes, including those related to authentication and access control, particularly in the context of operating systems and other computing applications. Different approaches to meeting computer security requirements, as well as increasingly important security standards are covered. This course has a special focus on low-level fundamentals of the Security Discipline such as the mathematical basis for Cryptography. This is accompanied by a series of real-world applications and hands on programming assignments. | | | | | | | | |

| | | | | Machine Learning is concerned with the design and analysis of algorithms that enable computers to automatically find patterns in the data. This introductory course will give an overview of the main concepts, techniques and algorithms that are relevant for the theory and practice of machine learning. The course will cover the fundamental topics of classification, regression and clustering, starting with simple learning models such as perceptrons, decision trees and logistic regression, and ending with more advanced models including Support Vector Machines, Conditional Random Fields and Bayesian networks. The description of the formal properties of the algorithms will be supplemented with motivating applications in a wide range of areas including natural language processing, computer vision, bioinformatics and music analysis. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |
| | | COURSE DESC: | | Social Media Content Creation focuses primarily on content creation and maintenance, in both traditional and anonymous platforms, applicable to several social media outlets with a focus on educational and business creation and benefit. | | | | | | | | |
| | | | | Students learn about a variety of social media platforms, the transmission of content within, and potential outlets for content creation, along with applicability in educational, professional, and personal scenarios. | | | | | | | | |
| | | | | Students explore the social media and content transmission business models, the cost of content creation in relation to and comparison with benefits, and new and emerging social media outlets and avenues for content creation within social media. | | | | | | | | |
| ENT | EECS | CTCH | 1801 | Introduction to Microsoft Word | Lecture | 1 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: WARNING: No credit for CTCH 1250 or BMT 2000 | | | | | | | | |
| | | COURSE DESC: | | Students learn the basics of creating and editing a basic word processing document using Microsoft Word. Techniques covered include page formatting such as setting margins and controlling layout, formatting text with color and font choice, paragraph formatting with spacing and justification, and use of graphics such as pictures and clipart. | | | | | | | | |
| ENT | EECS | CTCH | 1802 | Intermediate Microsoft Word | Lecture | 1 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | C or better in MATH D005 or Math Placement Level 1 or higher | | | | |
| | | COURSE DESC: | | Introduces the architecture, structure, functions, components, and models of the Internet and other computer networks. Instruction includes the OSI model and industry standards; network topologies; IP addressing, including subnet masks; and basic network design. Installation and operation of a simple routed and switched network. | | | | | | | | |
| ENT | EECS | CTCH | 1892 | Internetworking II | Lecture | 3 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | C or better in CTCH 1891 | | | | |
| | | COURSE DESC: | | Describes the architecture, components, and operation of routers, and explains the principles of routing and routing protocols. Analyze, configure, verify, and troubleshoot commonly used routing protocols, such as RIPv1, RIPv2, EIGRP, and OSPF. | | | | | | | | |
| ENT | EECS | CTCH | 1893 | Internetworking III | Lecture | 3 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | C or better in CTCH 1892 | | | | |
| | | COURSE DESC: | | In-depth introduction of how switches operate and are implemented in the LAN environment for small and large networks. Instruction includes LAN switch operation, VLAN implementation, and wireless network operation. Analyze, configure, verify, and troubleshoot VLANs, RSTP, VTP, and wireless networks. Campus network design and Layer 3 switching concepts introduced. | | | | | | | | |
| ENT | EECS | CTCH | 1894 | Internetworking IV | Lecture | 3 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | | | C or better in CTCH 1893 | | | | |
| | | COURSE DESC: | | Explains the principles of network traffic control and access control lists (ACLs) and provides an overview of the services and protocols at the data link layer for wide-area access. Explores user access technologies and devices; how to implement and configure common WAN protocols and services. | | | | | | | | |

| | | | | CTCH 1600 or 1891 Comprehensive overview of technologies, security, and best practices of wireless systems with current industrial standards such as IEEE802.11a, b, g, and n. Provides guidelines to plan, design, install, and configure wireless LANs. Wireless system security emphasized. | | | | | | | | |
| ENT | EECS | CTCH | 2670 | Introduction to Cloud Computing | Lecture | 3 | 0 | | N | U20 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | | | | | | | | |
| | | COURSE DESC: | | REQUISITE: | | | | | | | | |
| | | | | This course explores the fundamental concepts of cloud computing and how it differs from past information technology models. Cloud computing data storage, virtual servers, networks, and databases are covered. Other topics include security, load balancing, and auto scaling. Students access cloud based service providers and develop new skills by working with new or improved technologies. | | | | | | | | |

| ENT | EECS | EE | 4053 | Physical and Power Electronics ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 4313 COURSE DESC: Simplified 1-dimensional band theory of solids. Valence and conduction band occupancy from Fermi-Dirac statistics. Hole conduction and doping. Derivation of PN junction volt-amp-temperature characteristic. DC and AC characteristics of junction transistors derived from fundamentals. Application of semiconductor theory to solid state devices. Charge control analysis. Electro-optical effects. Semiconductor devices for the conversion and control of electric power. Device protection. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4143 | Design of Digital Circuits ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 1024 COURSE DESC: Digital design of microelectronic circuits, simulation, verification, and specification. Structural design concepts, design tools. VHDL language, data types, objects, operators, control statements, concurrent statements, functions, and procedures. VHDL modeling techniques, algorithmic, RTL, and gate level designs. Introduction to very large scale integration (VLSI) technology and design of CMOS integrated circuits. VLSI fabrication process, design rules, logic design, performance estimation, chip engineering, and computer aids to VLSI design. Emphasis on virtual prototyping, circuit design, optimization, verification, and testing. Design synthesis. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4183 | Micro and Nano Fabrication ELIGIBLE GRADES: GEC1: A-F REQUISITE: CHEM 151 or 1510 and PHYS 2051 COURSE DESC: Basic steps of fabrication used in the manufacturing of micro and nanoscale electronic devices. Si BiCMOS technology to be relevant to industry applications, while novel fabrication tools and processes used in the nanoscale engineering also included. Nanotechnology materials, devices and technologies that serve computing, communication and medical applications. Example applications chosen from CMOS chips, novel nanomaterials, MEMS/NEMS, photonics, and biomedical engineering. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4213 | Feedback Control Theory ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 3334 COURSE DESC: Introduction to analysis and design of feedback control systems. Introductory topics include mathematical modeling and computer simulation of physical systems, linear approximations of nonlinear systems, transfer function and state equation representations, and feedback control system block diagrams, characteristics, and performance specifications. Also covered are frequency domain methods for stability, sensitivity, robustness, and performance analysis and techniques for compensator design and simulation verification. MATLAB® and Simulink used extensively. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4290 | Mechanics and Control of Robotic Manipulators ELIGIBLE GRADES: GEC1: A-F REQUISITE: Sr only COURSE DESC: Classification and applications for mechanical manipulator systems. Manipulator motion description, forward kinematics transformations, and solution of inverse kinematics equations. Velocity kinematics and manipulator dynamics equations. Trajectory generation and control schemes including sensory feedback. Laboratory exercises to augment lecture material. | Lecture | 3 | 0 | | N | U30 | | 0 |

| ENT | EECS | EE | 4313 | Optoelectronics and Photonics ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Introduction to fundamentals of the light propagation in solid media, passive devices like waveguides and optical fiber. Introduction to important modern active optoelectronic devices. Emphasizes basic physical theory needed to understand LEDs, laser diodes, photodetectors, photovoltaics and their construction and applications. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4323 | Solar Cell and Photovoltaics ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Students in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; characteristics and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with the emphasis on physical concepts and applications. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4403 | Antenna and Microwave Theory ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Fundamental concepts and definitions for radiating systems including parameters, current distributions, matching, polarization and their effect on antenna performance. Transmission links, linear wire, loop, aperture, and array antennas discussed. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4523 | Introduction to Electric Power System Engineering and Analysis ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Includes power system representation, computer methods, symmetrical components, protection methods, and stability. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4673 | Embedded Systems ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Introduction and history of embedded systems; defining embedded system using requirements; embedded system processors including microcontrollers, low-power microprocessors, digital signal processors and Field Programmable Gate Arrays (FPGA); distributed embedded systems; timing aspects of embedded systems; real-time operation and real-time operating systems as applied to embedded systems; the economy of embedded systems; fault tolerance; communication protocols overview and more detailed description of the Controller Area Network (CAN) and Time-Triggered Protocol (TTP) as well as some wireless networks used in wireless sensor networks; defining interfaces and the use of mixed-signal systems (digital and analog); design methodologies and tools. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4683 | Computer Architecture ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Emphasis on the design of advanced architectural concepts for multicores; performance trade-offs for multicores, advanced pipelining, superscalar and dynamic scheduling, limits of instruction level parallelism, multithreading and multicores, multi-level caching, virtual memory, I/O fundamentals and techniques, classification of parallel machines, shared memory multiprocessors, cache coherence, interconnection networks and clusters. Term paper/project involving computer hardware design and system simulation required. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4713 | Communication Engineering ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Fundamentals of communication system engineering, at the physical layer. Resources available for communication system design. Probability and stochastic processes for communication systems, including noise. Analog communication systems and their performance. Baseband digital communications, carrier modulated digital communications. Basic link budget analysis. | Lecture | 3 | 0 | | N | U30 | | 0 |
| ENT | EECS | EE | 4773 | Foundations of Hardware Security ELIGIBLE GRADES: GEC1: A-F COURSE DESC: The course covers basic concepts in hardware security, which is different from software, network and systems security. Lab sessions give students hands on experience with performing attacks, developing countermeasures, and implementing secure hardware building blocks. Students are expected to have basic knowledge of digital logic and Register-Transfer Level (RTL) design, but no specific background in security/cryptography is necessary. Contemporary issues including recent research in hardware security are discussed. | Laboratory | 3 | 0 | | N | U30 | | 0 |

| ENT | EECS | EE | 5323 | Solar Cell and Photovoltaics ELIGIBLE GRADES: COURSE DESC: | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | | | GEC1: A-F REQUISITE: Students in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; characteristics and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with the emphasis on physical concepts and applications. | | | | | | | | |

| ENT | EECS | EE | 6013 | Electromagnetic Wave Propagation in Electronic Navigation Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: Electromagnetics and GPS background required. Electromagnetic principles and propagation of radio waves over the earth surface and through the atmosphere. Topics include groundwaves, skywaves, tropospheric and ionospheric effects, Total Electron Content, group and phase velocity, incident fields, reflection coefficients, Brewster angle, diffraction, scattering, Fresnel Zone. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6023 | Radar Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: Electromagnetics and antenna background helpful. Theory of operation of radar systems. Topics include the radar equation, radar cross-sections, radar altimeter, Air Traffic Control radar, Doppler radar, weather radar, synthetic aperture radar, Mode A/C/S. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6033 | Inertial Navigation Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: Graduate Standing COURSE DESC: Principles of operation of inertial navigation systems. Topics include rigid body kinematics, observation equations, attitude update, earth rate and transport rate, position and velocity updates, initialization, orientation, sensor technology, error sources and propagation, Schuler period, vertical instability. Heavy emphasis on simulation in MATLAB. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6053 | Satellite-Based Navigation Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: Some knowledge of GPS, navigation, mathematics, and computer science useful. Computer programming experience in MATLAB®. Theoretical development of spread spectrum ranging and positioning with space-based transmitters; ephemerides, broadcast signal structure; ranging observables; absolute and relative positioning methodologies; simple error source characterization and mitigation. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6063 | Integrated Navigation Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 6033 and 6053 COURSE DESC: Theoretical development of positioning and navigation with multiple sensors; basics of estimation theory; complementary filters, least squares estimators, Kalman filters used for navigation purposes; GPS/INS integration. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6073 | Navigation Receiver Design ELIGIBLE GRADES: GEC1: A-F REQUISITE: Graduate Status COURSE DESC: Theoretical development of receiver design with emphasis on spread spectrum ranging. Topics include: link budgets, antenna considerations, low-noise amplifiers, radio-frequency processing, down-conversion and intermediate frequency processing, in-phase and quadrature components, noise figure calculations, bandpass sampling, direct-sequence spread spectrum acquisition and tracking, theory and operation of numerically controlled oscillators and tracking loops, pseudorange and carrier-phase measurement generation. Heavy emphasis on processing of real data in MATLAB®. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6083 | Aviation Standards, Software Design and certification ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: Overview of aviation standards including Federal Aviation Regulations, Technical Standard Orders, Advisory Circulars, RTCA documents and ARINC standards; systems engineering; safety-critical systems and the safety assessment of these systems; certification of aircraft systems; software design using military and civilian standards, IEEE software standards, software life cycle processes, program design language, documentation, testing, independent test verification, case studies. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6103 | Vehicle Control ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 6283 COURSE DESC: Introduction to vehicle motion control theory and design. Mathematical modeling of aerospace, ground and marine vehicle motions in 6 Degrees-of-Freedom using (nonlinear differential) state equations will be introduced. Simplification assumptions and techniques are provided for the vehicle models to facilitate effective motion controller design. Stabilization and trajectory tracking controller design methods based on closed-loop dynamics assignment are taught along with computer simulations. An overview of more advanced topics will be provided to prepare the students for continuing studies. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6133 | High Accuracy Satellite Navigation Systems ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 6053 or 605 COURSE DESC: Theoretical development of correction and measurement based differential satellite navigation technologies, with emphasis on advanced error mitigation techniques and error analysis. High accuracy code and carrier phase processing emphasized with presentation on carrier-phase ambiguity resolution techniques. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6153 | VLSI Systems Design ELIGIBLE GRADES: GEC1: A-F REQUISITE: EE 5143 COURSE DESC: Communication and concurrency in computers; processor arrays; hierarchically organized machines. Structured design; layout algorithms; MOS cell library. Design tools; rule checking; timing analysis; switch level simulation; placement; and routing. | Laboratory | 3 | 4 | | N | G50 | | 0 |

| ENT | EECS | EE | 6163 | Computer Aided Analysis of Electronic Networks GEC1: A-F REQUISITE: Efficient numerical techniques for analysis of electronic circuits. Conveys a knowledge of advanced concepts of analog circuit simulation and design techniques. Emphasis on topics related to numerical analysis methods useful for the analog and mixed signal designs. General formulation techniques, sensitivity analysis, large change sensitivities, numerical Laplace transform inversion, solution of nonlinear networks, and circuit optimization discussed. Computer assignments completed using any computer language (C++, Pascal, Fortran) or simulation tool MATLAB®, MathCad, Mathematica). | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6173 | Fault Testable Design GEC1: A-F REQUISITE: EE 5143 Basic concepts of reliability. Physical faults and testing. Test generation for combinational and sequential logic circuits, random testing, and signature analysis. Fault tolerance and circuit redundancy, self testing and fail-safe design, fault tolerant VLSI design, practical fault tolerant systems. Self testing, design for testability, built-in test, boundary scan testing, IEEE standards. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6183 | Nanoelectronic Devices and Applications GEC1: A-F REQUISITE: EE 5183 and familiarity with the introductory level semiconductor devices course is useful for all students. Introduces fundamental and advanced concepts required for the understanding of electronic and ionic transport in micro and nanoscale devices. Reviews theory elements such as effective mass, band structure, electrostatics, screening, low and high-field transport, and scattering. Explores novel design tools and numerical techniques used for simulation of practical devices. Examines more closely the structure, operation, design principles, advantages and disadvantages, applications and future prospects for a wide range of traditional (diodes, MOSFETs, bipolar transistors etc.) and advanced (MODFETs, HBTs, nanowire and nanotube transistors, single-electron transistors, memristors, graphene devices, plasmonic devices, bio-molecular devices). On an orthogonal direction, surveys a number of critical technology fronts that many of devices reviewed may play an important role (ultra-low or high-power applications, high-performance solar devices, flexible electronics, THz devices and bio-nano sensors). | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6233 | Nonlinear System Analysis I GEC1: A-F REQUISITE: Introduction to nonlinear dynamical systems analysis: nonlinear dynamical system models, second-order nonlinear behaviors by phase plane analysis, including multiple equilibria, qualitative behaviors near equilibrium points, limit cycles and bifurcation; demonstration of chaotic behaviors by simulation; existence, uniqueness and sensitivity of solutions; Lyapunov stability and its assessment; input-output stability. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6283 | State-Space Methods in Control GEC1: A-F REQUISITE: Introduction to state-space methods for control system analysis and design. Topics include basic state-space concepts, writing state equations, solution of the state equation and the matrix exponential, relations to transfer functions, controllability and observability, stability, state-space methods of design including state feedback, state estimation, servomechanisms and an introduction to optimal control. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6323 | Integrated optics and passive photonic devices in integrated technologies. GEC1: A-F REQUISITE: Students taking this course must have had undergraduate courses in electromagnetic wave theory, differential equations, and vector calculus. This course is designed as an introduction to the basic elements of passive integrated optical devices. In the first part, we focus on the development of optical waveguides and investigate the utilization of these structures in passive photonic circuits. Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using Matlab throughout the course. In the second part of the course, we extend this analysis to specific devices and practical applications. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light detectors are presented, focusing on the theory of light-matter interaction and operation of various light detection systems. The detection of light is presented with an analysis of sensors as integrated detectors. Finally, recent progresses in integrated optics and novel concepts are studied to motivate research in these areas. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6333 | Integrated Optoelectronics and Photonics GEC1: A-F REQUISITE: EE 5313 Course focuses on the underlying physics and engineering behind devices that drive today's optoelectronics technology. In this course students study important details of structural properties, band structure, electrical transport, and optical and magnetic properties of contemporary semiconductor structures. Effects of dimensional physics and strain, two important driving forces in modern technology, will be emphasized and discussed in the light of layered structures. Furthermore, students will have an opportunity to focus on selected topics including: elected advanced concepts in semiconductor band structure, energy transfer, defects, impurities/doping, spontaneous material polarization, electro-optic and magneto-optic effects. These are the key modern semiconductor concepts relevant to active novel optoelectronic devices. The course will have a format of recitation and discussion. Students will be required to use programming tools to solve more mathematically complex problems. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 6343 | Modern Optical Materials and Devices GEC1: A-F REQUISITE: EE 6333 Provides introduction and overview of modern materials used in optics and optoelectronics including semiconductors and meta-materials. Topics extend from materials science to engineering of optoelectronic and photonic devices. Emphasis on understanding fundamentals relevant to applications in integrated optical systems combining optical emission and detection from the IR through the visible to the UV, linear and nonlinear optical phenomena, dynamics of optical processes, magneto- and electro- optics, high-excitation effects. Well established photonic and optoelectronic devices, plus novel device approaches based on the latest technological developments explored. | Lecture | 3 | 0 | | N | G50 | | 0 |

| ENT | EECS | EE | 7183 | Reinforcement Learning | Lecture | 3 | 0 | | N | G50 | | 0 |
| | | | | ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | | | | | | | |
| | | | | COURSE DESC: This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence. | | | | | | | | |
| | | | | "Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward---are the two most important distinguishing features of reinforcement learning." | | | | | | | | |
| | | | | This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time? | | | | | | | | |

| | | | | COURSE DESC: This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible. | | | | | | | | |
| | | | | The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined. | | | | | | | | |
| | | | | Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment. | | | | | | | | |

Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible. | | | | | | | | |

| ENT | EECS | EE | 7733 | Time Frequency Analysis and Wavelet Signal Processing and Applications GEC1: A-F REQUISITE: EE 6713 COURSE DESC: Good knowledge of Fourier transforms, properties, basic DSP: sampling, DTFT, and discrete time filtering (grad DSP course EE6713) required. Structured to cover two areas: the broad area of time-frequency (TF) analysis, and the focused application of wavelets to various signal processing tasks. In TF analysis, covers the fundamental need for this type of analysis, the uncertainty principle, densities, characteristic functions, and mathematical representations, the short-time Fourier transform and Spectrogram, the Wigner distribution, other TF distributions, and some TF distribution construction methods. Various examples will be used to illustrate the power and challenges of TF analysis. In the wavelet section, connects TF analysis to the use of wavelets, and covers multiresolution analysis, 1D and 2D compression of signals and images, noise reduction, and signal modulation. MATLAB Wavelet Toolbox used to implement, study, and visualize the operation of wavelet filter banks. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 7743 | Mobile Communications GEC1: A-F REQUISITE: EE 6723 COURSE DESC: Introduction to mobile communication system design and analysis. Topics include representations for bandpass signals and systems, modeling of the mobile communication channel including both large scale path loss and multipath fading, signal set and receiver design for the mobile communication channel, characterization of interference, principles of coding and equalization, diversity techniques, performance over fading channels, access and mobility control, mobile network architectures and multiple access, and signaling protocols for mobile communication systems. Examples of mobile communication systems will be studied, including the latest generation cellular and mobile satellite systems. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 7803 | CDMA and Spread Spectrum Communications GEC1: A-F REQUISITE: EE 6723 COURSE DESC: Introduction to code division multiple access (CDMA) and spread spectrum (SS) systems, with coverage of both direct sequence and frequency hopped spread spectrum. Primary focus is the physical layer. Origins of SS, jamming, spectral overlay, spreading sequences, and performance in AWGN and fading channels. Code acquisition and tracking, power control. Selected topics of current interest. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 7913 | Advanced Digital Control Systems GEC1: A-F REQUISITE: COURSE DESC: Well versed in analyzing and designing control systems employing continuous time controllers using classical frequency domain and root locus techniques and introduced to state space analysis techniques for continuous systems expected. Focuses on analysis and design of control systems in which a digital computer used to implement dynamic controllers so that performance specifications are met. Topics included are z-transforms, linear difference equations, development of linear models for analog to digital and digital to analog devices, state equations for sampled data systems, stability analysis of feedback sampled-data feedback systems, block diagram representation of sampled data systems, design of discrete state variable controllers for digital feedback control systems via modern state space approaches, e.g., LQG, pole placement, and analysis of sampled-data feedback system to assess stability and performance. MATLAB and or SIMULINK used as the principal computation tool. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 7953 | Advanced Probability and Stochastic Processes for Communications GEC1: A-F REQUISITE: EE 6723 COURSE DESC: Coverage of advanced probability and stochastic processes for communications applications. Transformations of RVs, sequences of RVs and stochastic convergence, multiple statistics, parameter estimation, hypothesis testing, random walks, spectral representations (e.g., KL expansions), Markov processes. Selected topics of current interest. | Lecture | 3 | 0 | | N | G50 | | 0 |
| ENT | EECS | EE | 7963 | Advanced State Variable Methods in Control GEC1: A-F REQUISITE: EE 5213 COURSE DESC: Rigorous treatment of controllability and observability for LTI systems; standard state variable forms; duality; minimal realizations; grammians; eigenvalue placement with full state feedback; full and reduced order observers; separation principle; robustness; discrete-time systems; multivariable systems. | Lecture | 3 | 0 | | N | G50 | | 0 |

| | | COURSE DESC: | | This course examines the aspects of technical operations management and how when applied effectively they can provide an organization with a product or service with higher quality and at a lower cost than their competition. Emphasis is on providing a conceptual understanding of the operations function, which includes: business measures, product/service design, capacity planning, facilities planning and layout, work system design, managing quality, materials planning and inventory control, supply chain management and automatic identification & data capture. | | | | | | | | |
| | | | | Operations is an essential function in all organizations, manufacturing or service, private or public, profit or non-profit. Technical operations managers work in factories, sports facilities, restaurants, banks, hospitals and clinics, airlines, etc. Operations are typically, by far, the largest segment of an organization with the largest budget, number of employees and square footage in the facility. All other departments in organizations interact with and are affected by Operations. For these reasons it is important to understand the operations functions. | | | | | | | | |

| | | COURSE DESC: | | In today's world, organizations compete in a global market place. In order to compete successfully, organizations must eliminate all forms of waste from their process, through continuous improvement processes. Lean enterprise principles provide methods to achieve these goals. Lean operational approaches provide an organization with a set of methods and tools to assist in the identification and then continuous eliminations of waste and enterprise improvements. | | | | | | | | |

| | | COURSE DESC: | | For ETM 4622, the enrolled students use the documentation and project plan developed as a part of their culmination experience in ETM 4621. Based on this documentation they develop a production management plan, tooling, an inventory control system, work instructions and a quality control plan to execute a production run. Students gain supervision and management experience through this where each group manages their peers to produce 15-25 products in a 6 hour time period. Students evaluate their peers as part of the assessment. The same student groups from ETM 4621 are maintained and so students complete ETM 4621 and 4622 in two consecutive semesters. Under special circumstances students are assigned to one of the teams in ETM 4622 by the instructor. | | | | | | | | |

| | | COURSE DESC: | | For ETM 4622, the enrolled students use the documentation and project plan developed as a part of their culmination experience in ETM 4621. Based on this documentation they develop a production management plan, tooling, an inventory control system, work instructions and a quality control plan to execute a production run. Students gain supervision and management experience through this where each group manages their peers to produce 15-25 products in a 6 hour time period. Students evaluate their peers as part of the assessment. The same student groups from ETM 4621 are maintained and so students complete ETM 4621 and 4622 in two consecutive semesters. Under special circumstances students are assigned to one of the teams in ETM 4622 by the instructor. | | | | | | | | |

| | | COURSE DESC: | | Lean and Six Sigma were developed as two separate methodologies to remove waste and improve quality in an enterprise. The overlap in the principles, tools and skill sets utilized by both methods has led to a synergy in how they are applied in conjunction with each other in an organization. This course introduces students to fundamental principles of leans and six sigma methodologies and provides them with key problem solving tools utilized in both methods. | | | | | | | | |

| | | COURSE DESC: | | This course is the capstone experience for students completing the Masters of Project Management graduate degree program. Students develop a case study portfolio with a client company to implement the project management tools and techniques learned within the degree program. Students have the option of working with the instructor to complete either the CAPM or PMP certification exams from the Project Management Institute as desired by the student. The culminating deliverable will be the individual student project portfolio. | | | | | | | | |

Methods of cost accounting are presented, compared and used. Relationships between cost, volume and profit are illustrated, and related parameters are calculated. Budgets for production, direct labor, manufacturing and other functions are prepared. Performance measures are analyzed and applied. Differential analysis techniques are used to support engineering management decisions. Financial statements and statements of cash flows are examined and interpreted to assess the financial health of engineering organizations. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: ISE 3200 or MATH 2500 | | | | | | | | |
| | | COURSE DESC: | | Design and analysis of engineering experiments approached from linear statistical model point of view. Blocking designs, full and fractional factorial designs, analysis of variance, and introduction to response surface methodology. Software for statistical analysis is utilized. | | | | | | | | |
| ENT | ISE | ISE | 4310 | Introduction to Systems Engineering | Lecture | 2 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: Sr only | | | | | | | | |
| | | COURSE DESC: | | Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems. | | | | | | | | |
| ENT | ISE | ISE | 4311 | Applied Systems Engineering | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F REQUISITE: (ISE 3040 or 3200) and (jr or sr) | | | | | | | | |
| | | COURSE DESC: | | Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ET 3300 and ISE 3200 | | | | | | |
| | | COURSE DESC: | | Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design. | | | | | | | | |
| ENT | ISE | ISE | 4335 | Applications of Mathematical Programming | Lecture | 2 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ISE 4140 | | | | | | |
| | | COURSE DESC: | | Formulation and solution of various mathematical programming models. Topics include linear programming, integer programming, and mixed-integer programming. Various solution algorithms will also be discussed. | | | | | | | | |
| ENT | ISE | ISE | 4345 | Network Analysis | Lecture | 2 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ISE 4140 | | | | | | |
| | | COURSE DESC: | | Engineering project planning using such techniques as PERT and critical path method, resource allocation in project networks, shortest path models, spanning-tree problems, traveling salesman problems, maximum-flow problems, and other stochastic network models, such as GERT. | | | | | | | | |
| ENT | ISE | ISE | 4350 | Database Information Systems | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ISE 2100 | | | | | | |
| | | COURSE DESC: | | Introduction to application and development of database systems in industrial engineering. In addition, students will learn database theory, data modeling and SQL. | | | | | | | | |
| ENT | ISE | ISE | 4355 | Introduction to Reliability Engineering | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ISE 3210 | | | | | | |
| | | COURSE DESC: | | Introduces students to fundamental reliability theory and applications. Reliability models, system reliability, reliability testing, and reliability data analysis are covered. | | | | | | | | |
| ENT | ISE | ISE | 4360 | Facility Planning and Design | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ET 3300 and ISE 3340 | | | | | | |
| | | COURSE DESC: | | The process of designing and laying out a facility with an emphasis on manufacturing facilities. Consideration will also be given to other facilities, such as warehouses, and service-oriented facilities, such as hospitals. Issues addressed include selecting the type and quantity of production and handling equipment; alternatives for material flow; qualitative and quantitative methods for developing the facility layout; determining the appropriate size for the departments and the facility; and utilizing software as appropriate for determining the facility design. | | | | | | | | |
| ENT | ISE | ISE | 4365 | Material Handling Systems Engineering | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ISE 3340 | | | | | | |
| | | COURSE DESC: | | Provides a broad understanding of materials handling engineering from a system design and application engineering point of view. Instruction in the engineering principles, design criteria, operating parameters, performance requirements, equipment resources, and applications of engineering practices involved in the planning, design, and operation of materials handling systems for manufacturing facilities, distribution facilities, and service facilities. A materials handling system design project is a required part of the course. | | | | | | | | |

| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | Sr only | | | | | | |
| | | COURSE DESC: | | Applications of industrial and systems engineering techniques, principles, practices, and methodologies as they relate to the operation, analysis, management, planning, and design of manufacturing systems. A manufacturing system design project is required as part of the course. | | | | | | | | |
| ENT | ISE | ISE | 4375 | Computer Integrated Manufacturing | Lecture | 3 | 0 | | N | U30 | | 0 |
| | | ELIGIBLE GRADES: | | GEC1: A-F | REQUISITE: | ETM 3070 | | | | | | |
| | | COURSE DESC: | | Provides the students with an understanding of the fundamentals of computer integrated manufacturing. Several issues will be addressed, product design and tolerances, numerically controlled machines and programming, CAD/CAM integration, process engineering, and process planning. Students will learn how to apply these techniques as a part of the typical manufacturing engineering task. The emphasis will be on interactions and interdependencies between the covered techniques. | | | | | | | | |
