COB	MGT	MGT	3740	Ideation and Business Models	LEC	LE	3	0		N	U30		40
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course is for entrepreneurs building the courage to create, and risk making mistakes in their quests for true innovations in products, services or processes. You will solve problems in uncertain and dynamic environments. Creativity is the central focus, which might be defined as applying your mental ability and curiosity to discover something new, the act of relating previously unrelated things. More specifically, we focus on capitalist creativity. This means that we must apply a Business Model framework to your creativity. We demand that your solutions be profitable (have a potential to be profitable) and reflect bottom-line practicality. More importantly they must create value. We provide challenging places to fully engage your brain to discover patterns to produce breakthrough ideas that solve business problems.									
COB	MGT	MGT	3780	Lean StartUp Accelerator	SEM	SE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course provides real world, hands-on learning on the process of actually starting a company, applying the Lean StartUp methodology. Our goal, within the constraints of a classroom and the time available is to create an entrepreneurial experience with all of the pressures of an early stage start-up. The class is designed to give you the experience of how to work as a team and turn an idea into a company. You will talk to customers, partners and competitors as you encounter the uncertainty of the start-up process. You will practice evidence-based entrepreneurship as you learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than you would want/use your product or service. Finally, based on the customer and market feedback you have gathered, you will use agile development to rapidly iterate your product or concept to build/design something customers would actually buy and use. Completion of this course is necessary for teams who wish to compete for admission to Ohio University's Innovation Engine Accelerator mentoring program, grant and investment funding opportunities via TechGROWTH Ohio and admission to other mentoring and funding opportunities designed to help start ventures at Ohio University.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		Managers need to be able to scan and understand the external environment in order to engage in the important planning and decision making tasks they face. In this course, students learn tools and techniques used by managers for understanding & analyzing the business environment, resources for environmental scanning and competitive analysis; how to identify and evaluate trends for the purposes of problem diagnosis & opportunity recognition; approaches to strategic prioritization; and sources of competitive advantage.									
COB	MGT	MGT	5003	Managerial Decisions & Challenges	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: MGT 5001									
		COURSE DESC:		This course examines the principles of judgment and choice in the face of uncertainty. Students are introduced to normative (i.e., how best to decide) and behavioral decision making (i.e., how do we decide). The latter approach recognizes that people use various tricks (i.e., heuristics) that simplify cognitive processing. While these serve well in some instances, they may also become traps that lead to poor results in others. Extensive study of bias helps students to recognize these tendencies and become better decision makers following a third approach known as prescriptive decision making (i.e., how should we decide).

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: MGT 5001									
		COURSE DESC:		This course examines the role of strategic leaders in contemporary organizations, the differences between strategic leadership and other forms of leadership, and the importance of strategic communications and crisis management for leaders in strategic roles.									
COB	MGT	MGT	5020	Operations & Project Management	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		The ability to effectively manage a business includes a complete understanding of the underlying operations and supply chain linkages. This course is designed to equip students with the foundation of theoretical knowledge and skills necessary to understand the core areas of operations management. Toward this end, this course integrates textbook learning (through readings and lectures) with real world examples (through discussion boards and case studies) to provide a full understanding of Operations. The course is also designed to encourage participation in discussion of student's job experiences as they relate to core operations topics.									
				Often we are involved with developing a new system, a new product, planning an event, or participating in an undertaking that we cannot simply repeat things we have done in our past experience. These are 'one-offs' or Projects. Projects are major undertakings that have a defined life time (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration, it is important to understand and appreciate the techniques and concepts used for successful project management. This course covers some of the issues related to projects, working on project teams and tools used for managing projects.									
COB	MGT	MGT	5021	Management of Lean Six Sigma Programs	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		Organizations are under increasing pressure to be better, faster, and cheaper. This pressure has driven many organizations to adopt process improvement methodologies, like Lean Six Sigma, to increase quality and decrease costs. This course is designed to equip students with the foundation of theoretical knowledge and skills necessary to manage Lean Six Sigma programs. The course integrates basic learning (through readings and lectures) with real world examples. After completing this course, students should understand how to effectively manage and navigate a process improvement program.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course is a deep dive into the strategic management aspects of talent acquisition, development and succession planning for organizational performance, sustainability and longevity. The course examines talent management from the enterprise or macro firm perspective and then share specific processes and tools for delivering results. Through agile teaming, complex business cases and in-class conversations with talent management scholars and executives, students investigate the essential contribution of talent for executing business strategy while ensuring individual, team and cultural alignment aspects. The course utilizes historical and modern perspectives of talent management, as well as numerous theories of human resource management and organizational behavior. For learning discovery, the course instructional design features a strong focus on team-based projects, consultative case analysis, simulations and in-class discussions to provide practical examples of effective and ineffective strategic talent management. Course content is explored from both a personal perspective and a professional business manager, or human resource professional perspective.									
COB	MGT	MGT	5032	Performance Management & Total Rewards	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		In today's globally competitive environment, organizations are more focused than ever on delivering measurable results - at an enterprise, business unit, team, and individual level. Performance, compensation and benefit systems are critical to attracting, motivating, and rewarding highly talented employees. Developing a comprehensive, effective performance management and reward system is a critical Human Resource imperative.									
COB	MGT	MGT	5060	Global Context of Business	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Business and management can no longer be defined as purely local or domestic in scope. Globalization has made an understanding of the international context a critical element in any manager's knowledge base. This course exposes students to the challenges confronting organizations as they seek to enter and operate in the multiple business environments and cultures that characterize the global economy today, and provides them with conceptual models and analytical approaches for problem solving and decision making in the global context.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		American business is international business; one third of the U.S. corporate profits are generated abroad. Yet billions of potential business dollars are lost every year because we ignore the expectations of people in foreign cultures, and the way that they do business. This course provides a framework for understanding cross cultural differences and using such knowledge in developing country specific management practices and policies. Moreover, it provides a guide for dealing with managerial issues associated with cross national environments, organizational design and adaptation, as well as those concerns of developing global talent, social responsibility and ethical behavior.									
COB	MGT	MGT	5062	Global Supply Chains and Networks	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	MGT 5060 or concurrent						
		COURSE DESC:		This course allows students to identify various aspects of the global supply chain and networks that facilitate international business strategy. The Transnational strategy is explored as a foundation of this course. The horizontal and vertical linkages and ecosystems that facilitate this strategy are explored.

COM	COM	COMM	2400	Introduction to Communication Innovation	LEC	LE	1	0		I	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Permission required									
		COURSE DESC:		The course serves Scripps College of Communication Innovation Scholars and provides an overarching perspective on the breadth of communication innovation, through the use of guest speakers, readings, and small team-based project work. Guest speakers include faculty, students and prominent alumni on the cutting edge of innovation as it relates to communication. Students explore creative thinking through problem-solving exercises. In addition, Scripps College of Communication Innovation Scholars are also OHIO HONORS recipients; this course introduces the three main precepts of the OHIO Honors program (research and creative activity, leadership, and community engagement), therefore reducing the need to take HC 2400 Intro to OHIO Honors.

COM	COM	COMM	3000X	Solving Real-World Media and Communication Problems through Innovation GEC1: A-F REQUISITE: COURSE DESC: This course introduces students to the concepts of incremental and disruptive innovation, and how both types of innovation have affected the media and communications industries. Working in teams, students propose an innovative solution to a provided real-world media and communications challenge. Students then create a Business Model Canvas and streamlined business plan, and project brief, which explain and support the essential elements of their solution, culminating in the production of a short visual presentation about the problem and proposed solution. Their solution is critiqued by a relevant industry professional, who provides written feedback to each student team. This course will be taught entirely online, with both asynchronous (e.g. Slack) and synchronous (e.g. Skype, or Google Hangout) components.	SEM	SE	3	0		N	U30		0

COM	COMS	COMS	7340	Narrative Approaches to Rhetorical Criticism	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This rhetorical methods class explores narrative approaches to rhetorical criticism. "Narrative" is construed broadly to encompass methods that view rhetorical transactions as dramatic events or as story-telling. Examples of narrative approaches to rhetorical criticism include Kenneth Burke's dramatic approach, Ernest Bormann's rhetorical vision/fantasy theme analysis, or Walter Fisher's narrative perspective. These approaches tend to construe rhetorical discourse as involving heroes/villains (protagonist/antagonist), conflict, and events (a plot).

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course focuses on performance as a paradigm for the study of communication processes, broadly defined. Performance is approached as method, experience, metaphor, and subject of analysis. The course is both conceptual and practical. It introduces students to key concepts in performance theory such as ritual, identity performance, culture, play, performativity, performing, performance texts, and performance process. Students gain experiential training in performance ethnography, ethnography of performance, autobiographical performance, autoethnographic performance, social justice organizing and performance, and performative writing. This training is accomplished through exercises in textual, aural, performative, material, poetic, and other sense-based representation of performance and everyday life.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course focuses on practical and conceptual skills necessary for conducting high-quality quantitative research in communication. The course covers survey and experimental designs that are particularly relevant to communication studies.									
COM	COMS	COMS	7520	Quantitative Measurement and Preliminary Analysis in Communication	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course covers measurement of quantitative data and the preliminary analyses required before conducting the substantive analysis of hypotheses and research questions. The measurement portion of the course focuses on decision making and techniques for producing and working with quantitative data, focusing in particular on conceptualizing and operationalizing quantitative variables. Students will explore statistical techniques for assessing measurement including reliability and exploratory factor analyses. The preliminary analysis portion of the course explores issues such as data cleaning, diagnosis and resolution of missing data issues, item-level analyses, forming multi-item scales, transformation, and evaluating confounds and covariates.									
COM	COMS	COMS	7530	Mediation and Moderation in Quantitative Methods in Communication	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course provides an introduction to the quantitative research method of moderation and mediation. A moderator variable is one that influences the strength of a relationship between two other variables, and a mediator variable is one that explains the relationship between the two other variables. This course is both conceptual and analytical. Students learn how to theoretically propose moderation analyses vs. mediation analyses and how to rationalize one approach over the other. Students also practice moderation and mediation through multiple regression and simple path analyses techniques (SPSS, PROCESS, and AMOS).

COM	COMS	COMS	8350	Studies in American Rhetoric	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course surveys examples of American rhetoric, broadly construed to include rhetorical traditions of native peoples before European contact as well as genres of public address and other rhetorical forms in many media across the political, social, and media history of the United States. The communication discipline's critical approaches to the various ideological, regional, and demographic traditions of American rhetoric are central to the course. Students gain a foundation for research in both historical and contemporary American rhetoric, especially as manifestations of the ancient rhetorical principle of kairos--appropriateness to time, place, and circumstances.									
COM	COMS	COMS	8360	Topics in Communication and Cultural Critique	SEM	SE	4	12		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course addresses the convergent aims of rhetoric and cultural studies, viewing both traditions as theoretical invitations to political and cultural critique. It acknowledges the rich and contested histories of both intellectual traditions and engages modes of inquiry that attend to matters of culture, identity, representation, power, ideology, and democracy as they implicate and intersect with our understandings of communicative practices and behaviors. Through the course, students become familiar with the common influences and divergent histories of rhetoric and cultural studies so that they may more productively engage in scholarship that contributes to the critique of public culture. Topics vary. Students may repeat the course for a total of 12 credits.

		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR									
		COURSE DESC:		This course introduces students to research on health communication issues in organizing and provides a forum for developing a research agenda in this area. Underscoring course reading and assignments is the assumption that health, wellness, illness, and healing acquire meaning through symbolic interactions located within social, political, economic, and cultural structures.									
COM	COMS	COMS	8420	Health Communication and Culture	SEM	EL	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE: PR									
		COURSE DESC:		The purpose of this course is to examine the influence of culture on communicative aspects of patient and public health. The course explores theories of communication medical anthropology, and health education to understand the conceptual foundations of intercultural health. The course analyzes how peoples' health beliefs play out in interactions with patients and providers, and examines how public health strategies can be designed for specific cultural contexts. The larger purpose of this course is to train graduate students to communicate more effectively with patients, providers, and the public in multicultural health care settings.

		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:									
		COURSE DESC:		This course provides an overview of theory and research within the broad scope of relationships and health communication. Specifically, students gain an understanding of health communication in personal, peer, and provider/caregiver relationships, including research on how health conditions shape communication in these relationships, as well as how every day communication in these relationships influences health.									
COM	COMS	COMS	8440	Health Communication and Society	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:									
		COURSE DESC:		Seminar exploring the relationships among communication, public culture, and public perceptions of health and wellness. Surveys theoretical approaches (i.e., cultural studies, rhetorical analysis) and emphasizes the application of theory through writing and criticism. There is a strong emphasis on exploring current issues and challenges facing the health care industry and the public's understanding of health and wellness.									
COM	COMS	COMS	8450	Health Communication Campaigns	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course explores the theory and practice of communication campaigns that attempt to influence awareness, knowledge, attitudes, beliefs, and behaviors related to health. Students examine theories and research that inform the development, implementation, and evaluation of campaigns with an emphasis on practical implications. The course also focuses on values and ethical dilemmas in the design and conduct of campaigns.

COM	COMS	COMS	8470	Communication and Uncertainty in Health and Illness	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC2: A-F, REQUISITE:									
		COURSE DESC:		Uncertainty is common in diagnosis, prognosis, and treatment for many illnesses, and in relationships among patients, care providers, and family members, where illnesses experiences are addressed. Communication is a source of illness-related uncertainty, a resource for dealing with such uncertainty, and most generally the medium through which the presence and meanings of uncertainty are constructed. This course examines the nature of illness-related uncertainty, and theory and research on communication and uncertainty related to instrumental, identity, relational, and affect management; it examines these issues in contexts such as health information seeking, health screening and genetic testing, diagnosis and medically unexplained symptoms, treatment decisions, including end-of-life care, and social support.									
COM	COMS	COMS	8480	Environmental Communication	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE:									
		COURSE DESC:		This course focuses on how we communicatively construct and affect the environment. Students analyze and critique a wide range of voices (e.g., citizen and community groups, Greens, corporations and lobbyists, scientists, anti-environmentalists, public officials and regulators, journalists) on a variety of environmental disputes. Students learn about environmental decision making and conflict resolution, advocacy, climate and environmental justice movements, science communication, and risk communication in the context of current environmental issues. The course is designed to accommodate primarily communication studies doctoral students, but it reviews foundational theories in sufficient detail to equip students from other programs to participate effectively. The course equips students to conduct original research on environmental communication and to engage in activism as appropriate to interests and exigencies.

COM	ITS	ITS	2801	Scripting Projects ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: The terms scripting or coding refer to the process of creating small computer programs or "scripts" in a less formal context than traditional computer programming. Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students who have some prior experience with scripting. Students without this experience should take ITS 1801 first. In this course, python is used to develop solutions to practical problems across various disciplines. Throughout the course, best practices for code version management using git are introduced. In the second half of the semester, students have the option to expand beyond python to learn scripting in either bash or PowerShell.	LEC	LE	3	0		N	U30		0

		COURSE DESC:		REQUISITE:									
				Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ITS 6250									
		COURSE DESC:		Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview or their structure, security and the deployment planning process.

		ELIGIBLE GRADES:		GEC1: A-F									
		COURSE DESC:		REQUISITE: Soph or Jr or Sr									
				Investigates the construction of nonfiction film and televisual documentary imagery, from the inception of motion pictures (ca 1895) through the current postmodern American landscape. In the course, a representative sampling of the documentary film canon by historical figures is screened, which will assist in gaining understanding of the contemporary context within which these documentary constructions were assembled. Because this course is taught within the School of Telecommunications, the second part of the course necessarily moves toward examining the influences American network television, cable, and video technology have had on the form.

				Digital transformation is an example of the need for businesses to innovate and change as the market and consumer desires evolve. As opportunities and risks are identified, organizations need the ability to transform business models or processes to account for digital media technology and economic shifts; and develop creative, innovative digital media products or services to adapt to evolving audience or user demands. This course is devoted to the theories and best practices that enable developing and sustaining an organizational culture of continuous digital media transformation and innovation. Particular attention is given to communicating effectively within and across groups, teams, organizational units, and external communities; building trust both within a creative media organization and with external constituencies; and the fundamentals of assessing readiness for digital media transformation.

		COURSE DESC:		Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers.

				ELIGIBLE GRADES:	GEC4: A-F, REQUISITE:								
				COURSE DESC:	Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the citizen to the state, (c) the nature of the "good" life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples.

				ELIGIBLE GRADES:	GEC4: A-F, REQUISITE:								
				COURSE DESC:	Examines educational thought, theory and assumptions regarding the role that education may play in bringing about transformative social change that addresses issues of social justice. Examples drawn from contemporary innovative alternative community or school-based programs, guerilla radio or internet programming, conflict reduction programs bringing children of warring parties together, to the historical contributions of Freedom Schools from the Civil Rights Movement, the Highlander Folk Center in Tennessee, and the liberatory pedagogy of Freirean Culture Circles, among other educational initiatives. Change may occur within a school setting, or through community-based educational programs, or via larger national/international educational movements and programs. Grassroots organizing will be noted.								
EHS	EDST	EDCS	5030	Advanced Study in Philosophy of Education	SEM	SE	4	0		N	G50		0
				ELIGIBLE GRADES:	GEC4: A-F, REQUISITE:								
				COURSE DESC:	Identifies particular philosophical schools of thought related to education or specific philosophers who address education. Examples of philosophers range from John Dewey to Alaine Locke to Maxine Greene and bell hooks who address the educational realm directly. Other philosophers who include educational philosophy in their general bodies of work include those such as Plato, Rousseau, Wolfe, Rorty and Foucault, among others. Potentially every philosophical school of thought from Ancient Greek philosophy to Existential philosophy to Postmodern and Post-Colonial philosophy can be studied for its educational implications. Each semester offering will select from among possible schools of philosophical thought and/or movements, as well as choosing from among specific philosophical thinkers.

				ELIGIBLE GRADES:	GEC4: A-F, REQUISITE:								
				COURSE DESC:	Education is not a neutral endeavor. It is both a societal enterprise and a localized social activity; as such, it is embedded in an ever changing socio-cultural context. Taken seriously, these two ideas point our attention to several sociological and political questions about education such as, What is the purpose of education? Who benefits from education as it is constituted? Who decides curriculum, structure, funding, etc.? What are the implications for any given educational setting? Who is marginalized by the way we "do" education in the U.S. context? What does educational change look like? Is change possible in U.S. schools, and if so, in what manner? Critically examines the complex interactions of societal structures and political ideologies as they intersect, influence and impact educational realities in U.S. public schools.

EHS	EDST	EDCS	5090	Education and the Democratic Community	SEM	SE	4	0		N	G50		0
				ELIGIBLE GRADES:	GEC2: A-F, REQUISITE:								
				COURSE DESC:	Explores the relationship between democracy and education from multiple perspectives, including liberal democracy, pragmatist democracy and radical democracy. Critically examines concepts important to a democracy that relate to the distinction between public and private spheres, pluralism, community, individuality and responsibility, for example. Begins with assumption that schools in the U.S. have a significant role in educating for participatory democratic citizens. Examines whether and how our public schools accomplish this aim, or whether they in fact, work contrary to it. Examines pedagogical practices and school as an institution and inquire about their effectiveness in educating for an inclusive and participatory democracy. Examines contemporary and enduring issues in our democracy that are connected to or impact our students, schools and communities.

EHS	EDST	EDCS	5100	Introduction to Critical Studies in Education	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR									
		COURSE DESC:		Examines how educational systems are situated within the context of culture, knowledge, the economy, media and power. Utilizing interdisciplinary sources, explores the relationship between school and society with interpretive, normative, and critical theories and methods. Applies critical and cultural theories to deconstruct the socio-cultural influences and hegemony acting upon and utilizing education; the implications of those factors on the purposes of education, how we educate, foster student engagement and create successful learning communities in school and beyond will be examined. Attention given to contemporary dimensions and dynamics that intersect and impact education today, i.e., youth culture, marginalized voices, and popular media and culture. Examines several alternative theoretical and pedagogical approaches that have the potential to more closely fulfill the democratic 'promise' that education can indeed, make a difference in individual lives and create more socially just people, schools, communities and world.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: Admission to CSE masters graduate program									
		COURSE DESC:		Allows for two primary learning activities. First, offered as an introduction to graduate studies in critical studies in education foundation (CSE), addressing issues preparatory to graduate work, including but not limited to: graduate study expectations, writing at the graduate level, publishing and presenting, collaboration, learning APA style, and introductory discussions about research topics and methodologies. The second provides space to invite guest speakers, hold panel discussions, show films, and/or have CSE student research presentations.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR									
		COURSE DESC:		Examines the historical and contemporary issues of diversity in education. Schools and classrooms do not exist in a socio-political vacuum. Premised on how education has been and continues to be a site, if not a tool, for power and privilege as well as resistance and social justice. In addition to leading students through a self-examination of their own assumptions and beliefs surrounding diversity, explores historical events and legal cases related to diverse students in schools; theories of identity and culture and how these theories impact constructions of diversity and multicultural education; and strategies for effectively engaging issues of diversity in educational contexts. Offers an opportunity to engage in diversity education in the larger community through a service learning experience.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE: CR, PR									
		COURSE DESC:		Provides opportunity for in-depth study of various culturally-based pedagogies that have been developed for the education of historically marginalized peoples. May be couched in historical movements such as the Black Power Movement or the American Indian Movement of the 1960 and 70s, or may be more contemporary pedagogical approaches such as: (a) dual language immersion schools for Spanish and English speaking students, (b) centered education approaches for Native American and African American students in particular, (c) Freirean literacy approaches for adult learners from working class or working poor backgrounds, (d) gender segregated approaches or separate learning environments. In addition, explores other potential pedagogical strategies based upon understanding cultural contexts and the contemporary educational climate.

		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Examines alternative approaches to educational theory and pedagogy. As a theory-based course, interrogates the social, cultural, and philosophical contexts of education. Focuses on relational/caring theory and other alternative educational theories that promote holistic education, home or open schooling models, arts, environmental, nature, and spirituality based education. Ultimately examines the connection between interpretations of the human condition and education.									
EHS	EDST	EDCS	7010	The Social and Cultural Contexts of Leadership	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Examines the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examines leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vets leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership.									
EHS	EDST	EDCS	7020	The Moral and Ethical Dimensions of Leadership	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one's moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives.									
EHS	EDST	EDCS	8010	Critical Cultural Theories & Pedagogies for Empowering Education	SEM	SE	4	0		N	G50		0
		ELIGIBLE GRADES:		GEC4: A-F, REQUISITE:									
		COURSE DESC:		Provides an advanced examination of the relationships between schools and society, focusing predominantly upon critical theory and its derivatives, in order to understand the role of education and schools' unique position within society. Any institution with power has the ability to do good, as well as the power to do harm. Explores empowering pedagogies that emanate from critical theories in order to address the role of power and related concepts in educational institutions and provide pedagogical tools for educators and students to critically examine the implications and consequences of how we educate. Examines the societal, cultural, institutional and personal domains as we inquire into how we might educate all our young people well in the midst of changing social and institutional contexts, power, and resistance.

		COURSE DESC:		Required course for all teachers seeking Ohio licensure. Acquaints candidates with technology applications commonly found in educational settings. Using TPCK theoretical framework (Technological Pedagogical Content Knowledge) encompasses effectively identifying, locating, evaluating, designing, preparing and efficiently using educational technology as instructional resources in the classroom as related to the principles of teaching and learning. Develops increased classroom communication abilities through lectures, discussions, modeling, computer lab experiences and completion of a comprehensive portfolio project. Utilizes variety of open source technologies to develop and enhance classroom instruction including hardware and software to develop skills in word processing, using spreadsheets, use of the Web, evaluating educational software and evaluating web pages, use multimedia and create a Web page. Utilizes low, medium and high technology to enhance classroom instruction, communication and classroom management. Designed to meet the requirements of the International Society for Technology in Education NETS Standards for Teachers (http://www.iste.org/Content/NavigationMenu/NETS/ForTeachers/2008Standards/NETS_for_Teachers_2008.htm) and the National Council for the Accreditation of Teacher Education (NCATE) technology requirements.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: EDRE 7200 and 7500									
		COURSE DESC:		This course provides an introduction of mixed methods research in social and educational sciences to graduate students who are already familiar with quantitative and qualitative research and students who may conduct mixed methods theses/dissertations. Mixed methods research is more than simply collecting both quantitative and qualitative data, and instead, it integrates quantitative and qualitative methods from the research-planning phase to the implementation phase. This course focuses on major characteristics of mixed methods and three basic designs, i.e., convergent parallel design, explanatory sequential design, and exploratory sequential design. It offers individuals a foundation for conducting mixed methods research.

		COURSE DESC:		The course is designed to enhance students' understanding and application of mixed methods. It focuses on how to design advanced mixed methods projects to achieve complex research objectives. This advanced course is project-based and requires students to complete individual mixed methods projects. This course focuses on the application of mixed methods research and the discussion on three advanced mixed methods research designs in details, i.e., embedded design, transformative design, and multi-phase design.

EHS	EHS	PCOE	2301C	Building Leadership in Adolescent Girls through Mentorship	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students are paired with local area middle school girls and the Ohio University's Women's Center to conduct the Young Women's Leaders Program. If students would like to be paired, they are required to complete both a BCI and FBI background check. Students are responsible to pay this fee. The service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), even though they are no longer enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that enables students to create workshops that can be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course.

		COURSE DESC:		This course prepares Adolescent-Young Adult teacher candidates with a broad-based understanding of central issues involved in the learning and teaching of science, and the nature of knowledge in science. These concepts are integrated into practical activities designed to prepare the candidates for teaching in actual science classrooms and in the community through the integration of service learning projects. Candidates are expected to design individual lessons and a unit that take into consideration national and state standards, classroom management, student safety, learning theory, assessment, the nature of science, and science in the community. Candidates are also expected to apply accurate science content, inquiry skills, and practices through class/field activities and assignments. As this is a service learning designated C course, students are required to actively participate in and reflect upon meaningful service commitments within the community. Travel to and from service learning sites is necessary and is organized collaboratively through our class. These service learning obligations require out of class time; however, all efforts are made to ensure that scheduling and service options are flexible and meet student professional needs and interests.

				This class covers the fundamental concepts, principles of structural modeling, and computer-aided structural design. In this class, each student gains many hours of practical modeling experience using a powerful finite element package widely used by structural engineers. The class first starts with modeling of the common structural components under a variety of loading conditions. Then, the class addresses issues such as how to interpret the model analysis results and how to make design choices. Experiences gained with the software package used should transfer easily to any other structural analysis software package.

		COURSE DESC:		Introduces statistics and stochastic process theory, and makes applications in the field Bioinformatics, i.e., the study and analysis of biological, and in particular genetic, data.									
ENT	EECS	CS	5200D	Organization of Programming Languages	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		A hands-on introduction to the science of programming and programming languages, including topics such as: structured data and pattern-matching, recursive and polymorphic data, recursion and higher-order functions, lazy evaluation and streams, automated and equational reasoning about programs, concrete and abstract syntax, grammars, interpreters, desugaring, types and type-checking, type safety, mutable state, references, and objects. Over the course of the semester, students build interpreters and type checkers for a series of increasingly complex languages.

Introduces fundamental and advanced concepts required for the understanding of electronic and ionic transport in micro and nanoscale devices. Reviews theory elements such as effective mass, band structure, electrostatics, screening, low and high-field transport, and scattering. Explores novel design tools and numerical techniques used for simulation of practical devices. Examines more closely the structure, operation, design principles, advantages and disadvantages, applications and future prospects for a wide range of traditional (diodes, MOSFETs, bipolar transistors etc.) and advanced (MODFETs, HBTs, nanowire and nanotube transistors, single-electron transistors, memristors, graphene devices, plasmonic devices, bio-molecular devices). On an orthogonal direction, surveys a number of critical technology fronts that many of devices reviewed may play an important role (ultra-low or high-power applications, high-performance solar devices, flexible electronics, THz devices and bio-nano sensors). ENT	EECS	EE	6323	Theoretical and practical analysis of passive and active photonic devices in integrated technologies ELIGIBLE GRADES: GEC1: A-F COURSE DESC: Students taking this course must have had undergraduate courses in electromagnetic wave theory, differential equations, and vector calculus. This course is designed as an introduction to the basics elements of integrated optical devices. In the first part, we focus on the development of optical waveguides and investigate the utilization of these structures in passive photonic circuits. Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using MatLab throughout the course. In the second part of the course, we extend this analysis to active devices. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light emitting devices are presented, focusing on the operation and theory of light emitting diodes (LEDs) and semiconductor lasers. The detection of light is presented with an analysis of semiconductor integrated detectors. Finally, recent progresses in integrated optics and novel concepts are studied to motivate research in these areas.	LEC	LE	3	0		N	G50		0

ENT	EECS	EE	7183	Reinforcement Learning	LEC	LE	3	0		N	G50		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence. "Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward---are the two most important distinguishing features of reinforcement learning." This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time?									
ENT	EECS	EE	7213	Cognitive Neuroscience and Embodied Intelligence	LAB	LB	4	0		N	G50		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE: COURSE DESC: This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible. The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined. Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment.

				ELIGIBLE GRADES: GEC1: A-F									
				COURSE DESC: REQUISITE: EE 6713 Good knowledge of Fourier transforms, properties, basic DSP: sampling, DTFT, and discrete time filtering (grad DSP course EE6713) required. Structured to cover two areas: the broad area of time-frequency (TF) analysis, and the focused application of wavelets to various signal processing tasks. In TF analysis, covers the fundamental need for this type of analysis, the uncertainty principle, densities, characteristic functions, and mathematical representations, the short-time Fourier transform and Spectrogram, the Wigner distribution, other TF distributions, and some TF distribution construction methods. Various examples will be used to illustrate the power and challenges of TF analysis. In the wavelet section, connects TF analysis to the use of wavelets, and covers multiresolution analysis, 1D and 2D compression of signals and images, noise reduction, and signal modulation. MATLAB Wavelet Toolbox used to implement, study, and visualize the operation of wavelet filter banks.

		COURSE DESC:		A continuation of ET 1100. Covers 2D and 3D drawing using Solid Edge software, general dimensioning, geometric dimensioning, surface texture, threaded fasteners, and welding symbology. Note, detail and assembly drawings will be created for all the parts of two different products (metric and inch). The focus is on creating accurate 3D geometry and usable 2D production drawings. The dimensional metrology part of the course will cover the verification of general and geometric dimensions using basic measuring instruments.

		COURSE DESC:		This course examines the aspects of technical operations management and how when applied effectively they can provide an organization with a product or service with higher quality and at a lower cost than their competition. Emphasis is on providing a conceptual understanding of the operations function, which includes: business measures, product/service design, capacity planning, facilities planning and layout, work system design, managing quality, materials planning and inventory control, supply chain management and automatic identification & data capture.									
				Operations is an essential function in all organizations, manufacturing or service, private or public, profit or non-profit. Technical operations managers work in factories, sports facilities, restaurants, banks, hospitals and clinics, airlines, etc. Operations are typically, by far, the largest segment of an organization with the largest budget, number of employees and square footage in the facility. All other departments in organizations interact with and are affected by Operations. For these reasons it is important to understand the operations functions.

		COURSE DESC:		This course is the capstone experience for students completing the Masters of Project Management graduate degree program. Students develop a case study portfolio with a client company to implement the project management tools and techniques learned within the degree program. Students have the option of working with the instructor to complete either the CAPM or PMP certification exams from the Project Management Institute as desired by the student. The culminating deliverable will be the individual student project portfolio.

		COURSE DESC:		Engineering management skills and executive leadership are required to meet the demands of both global and domestic markets. Modern corporations require engineering leadership to be creative and progressive, and to produce profitable performance. Will help engineers to broaden their understanding of management activities and their unique applications to engineering functions.									
ENT	ISE	EMGT	6010	Engineering Writing	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Designed to help students to develop the ability to think critically as a professional communicator by asking appropriate questions that will enable them to understand, develop, and produce effective communication using the following elements of thought: purpose, basic concepts, information sources and needs, underlying assumptions, inferences/conclusions, implications/consequences, points of view, and questions raised and addressed.

ENT	ISE	EMGT	6500	Lean Thinking Methods	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	EMGT 6000						
		COURSE DESC:		The objective of this course is to teach students tools for applying lean thinking, lean principles and lean methods in manufacturing and service systems. Students will learn basic methods of the lean production, such as value-stream mapping, 5(6)-S, continuous flow, Kanban, SMED, A3, continuous improvement. The methods will be learned by practicing them in group discussions and in projects. Upon completion of the course, students will possess skills to apply lean methods in their working environments.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:	EMGT 6000						
		COURSE DESC:		Principles and techniques of accounting, finance, performance measures and decision making are examined and applied in the engineering management context. Methods of cost accounting are presented, compared and used. Relationships between cost, volume and profit are illustrated, and related parameters are calculated. Budgets for production, direct labor, manufacturing and other functions are prepared. Performance measures are analyzed and applied. Differential analysis techniques are used to support engineering management decisions. Financial statements and statements of cash flows are examined and interpreted to assess the financial health of engineering organizations.

ENT	ISE	ISE	4310	Introduction to Systems Engineering	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: Sr only									
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.									
ENT	ISE	ISE	4311	Applied Systems Engineering	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: (ISE 3040 or 3200) and (jr or sr)									
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.

		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ISE 3200 or MATH 2500									
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.									
ENT	ISE	ISE	4320	Inventory and Manufacturing Control II	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ISE 4120									
		COURSE DESC:		Discussion of more advanced inventory and manufacturing control methods. Topics include forecasting, inventory control, aggregate planning, materials requirements planning, capacity requirements planning, conversion to cells, just-in-time/kanban, scheduling procedures, and production-rate based scheduling. A kanban design project is required as part of the course.									
ENT	ISE	ISE	4325	Supply Chain Engineering	LEC	LE	3	0		N	U30		0

		COURSE DESC:		This course explores the key issues associated with the design and management of supply chains. Supply chains are the cornerstone of today's global economy and are concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time.									
ENT	ISE	ISE	4330	Cost Engineering	LEC	LE	2	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ET 3300 and ISE 3200									
		COURSE DESC:		Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design.

		COURSE DESC:		Applications of industrial and systems engineering techniques, principles, practices, and methodologies as they relate to the operation, analysis, management, planning, and design of manufacturing systems. A manufacturing system design project is required as part of the course.									
ENT	ISE	ISE	4375	Computer Integrated Manufacturing	LEC	LE	3	0		N	U30		0
		ELIGIBLE GRADES:		GEC1: A-F REQUISITE: ETM 3070									
		COURSE DESC:		Provides the students with an understanding of the fundamentals of computer integrated manufacturing. Several issues will be addressed, product design and tolerances, numerically controlled machines and programming, CAD/CAM integration, process engineering, and process planning. Students will learn how to apply these techniques as a part of the typical manufacturing engineering task. The emphasis will be on interactions and interdependencies between the covered techniques.

ENT	ISE	ISE	5300	Introduction to Designed Experiments	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Design and analysis of engineering experiments approached from linear statistical model point of view. Blocking designs, full and fractional factorial designs, analysis of variance, and introduction to response surface methodology. Software for statistical analysis is utilized.									
ENT	ISE	ISE	5310	Introduction to Systems Engineering	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Introduction to systems engineering concepts. Continuous time and discrete time methods for modeling of systems. Systems structure, open-loop and closed-loop systems, positive and negative feedback. State and transition equations. Applications to modeling in manufacturing, production and inventory systems, service industries, physical and biological systems.									
ENT	ISE	ISE	5311	Applied Systems Engineering	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Introduces students to key thoughts and tools needed to move to the next level of engineering design excellence, where designing an operational component that works well by itself is not enough. Here students learn how to ensure that a product meets the customer's actual need, that it works optimally and behaves as expected within a much larger and more complex system, that it lasts for its entire expected life, and that it does all these things at an affordable and stable cost. Individual disciplines of system engineering, such as requirements analysis, functional design, and life cycle cost analysis, are identified, integrated into a new way of thinking--systems thinking--and illustrated by a series of exercises and actual case studies from industry and government. Notable successes and spectacular failures are examined, and the indispensable role of the influential team leader is described. Systems engineering is shown to be a uniquely effective interface between management, customers, suppliers, specialty engineers and other stakeholders in the systems development process.									
ENT	ISE	ISE	5315	Decision Theory	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Introduction to decision theory and its applications are covered. Decision making under different circumstances are discussed. Fuzzy decision making is also briefly introduced. Single objective and multiple objectives cases are illustrated. Single person as well as multiple-person decision making is differentiated. Examples will be given from different applications such as inventory control, scheduling, system design, and economic analysis.									
ENT	ISE	ISE	5320	Inventory and Manufacturing Control II	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Discussion of more advanced inventory and manufacturing control methods. Topics include forecasting, inventory control, aggregate planning, materials requirements planning, capacity requirements planning, conversion to cells, just-in-time/kanban, scheduling procedures, and production-rate based scheduling. A kanban design project is required as part of the course.									
ENT	ISE	ISE	5325	Supply Chain Engineering	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course explores the key issues associated with the design and management of supply chains. Supply chains are the cornerstone of today's global economy and are concerned with the efficient integration of suppliers, factories, warehouses and stores so that products are distributed to customers in the right quantity and at the right time.									
ENT	ISE	ISE	5330	Cost Engineering	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Instruction in product cost estimating, product value engineering, and manufacturing performance evaluation in state-of-the-art manufacturing systems. Examines the application of industrial engineering techniques, work measurement, cost accounting, and computers to manufacturing cost measurement and process design.

		COURSE DESC:		Examines networks of manufacturers and distributors. Study of buyer/supplier relationships and the procurement of materials, including product requirements and negotiations.									
ENT	ISE	ISE	6600	Geometric Modeling in Manufacturing	LEC	LE	2	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		An advanced graduate level course in manufacturing applications of geometric modeling. Topics covered will include geometric transformations, solid modeling representations, feature recognition and feature modeling, and generative process planning.									
ENT	ISE	ISE	6710	Scheduling and Sequencing	LEC	LE	3	0		N	G40		0
		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		Defining scheduling function, performance measures and terminology. Topics include scheduling algorithms for single machine, parallel machine, flow shop, job shop, cellular manufacturing systems, flexible manufacturing systems and also solution methodologies such as heuristic procedures, constructive algorithms, branch and bound approaches, dynamic programming, linear programming, integer programming, mixed integer programming, genetic algorithms, tabu search simulated annealing and fuzzy math modeling. Focusing on manufacturing scheduling in practice with relations to capacity, multiple resource requirements and material availability. Also discussing hierarchical scheduling approaches needed to solve nested scheduling problems using case studies.

				ELIGIBLE GRADES: GEC1: A-F REQUISITE:									
				COURSE DESC: The objective is to enable the students to learn methods and techniques of artificial intelligence and enable them to apply these methods in building knowledge-based engineering systems. Students will learn fundamental AI techniques (such as space search and knowledge representation) and study several techniques for building knowledge-based systems in various domains. After successfully completing this course, the students will possess enough theoretical knowledge and programming experience for building intelligent systems in their engineering disciplines.									
ENT	ISE	ISE	7100	Genetic Algorithms in Manufacturing	LEC	LE	3	0		N	G40		0
				ELIGIBLE GRADES: GEC1: A-F REQUISITE:									
				COURSE DESC: Genetic algorithms are search algorithms based on the mechanics of natural selection and natural genetic operators such as crossover and mutation. Genetic algorithms and evolutionary computation concepts will be presented. Their application to engineering problems in manufacturing system design, scheduling, lot sizing, layout, constrained optimization, vehicle routing and other network problems will be emphasized. In addition, their connections to other artificial intelligence paradigms, such as genetic programming, fuzzy logic, and artificial immune system will be introduced.

		ELIGIBLE GRADES:		GEC1: A-F	REQUISITE:	ME 3012 and 3022							
		COURSE DESC:		This course covers the history, analysis, flight mechanics, and design of modern rockets and missiles. A historical perspective of the significance and design practices used to develop rockets and missiles are explored. Each of the five major rocket and missile components are discussed and analyzed separately and then combined to form a flight system. Mechanics of flight and basic aerodynamics are covered in order to develop a six degree of freedom flight simulator. A final project occurs to allow exploration of a design and simulation of a full rocket delivering a payload or a tracking missile.

		ELIGIBLE GRADES:		GEC1: A-F		REQUISITE:							
		COURSE DESC:		This course covers the history, analysis, flight mechanics, and design of modern rockets and missiles. A historical perspective of the significance and design practices used to develop rockets and missiles are explored. Each of the five major rocket and missile components are discussed and analyzed separately and then combined to form a flight system. Mechanics of flight and basic aerodynamics are covered in order to develop a six degree of freedom flight simulator. A final project occurs to allow exploration of a design and simulation of a full rocket delivering a payload or a tracking missile.

ENT	ME	ME	6500	Advanced Engineering Mathematics I GEC1: A-F REQUISITE: COURSE DESC: This course will focus on analytical solutions to linear Partial Differential Equations (PDEs), with an emphasis on applications of PDEs in Engineering problems. The goal is to impart to students the excitement and usefulness of mathematics as a tool in solving real-world problems. The approach will be to look at the mathematical modeling & solution of simplified Engineering problems. The course is intended to act as a foundation course for engineering graduate students coming from a range of backgrounds, but with previous exposure to multi-variable calculus and linear constant coefficient ordinary differential equations. ENT	ME	ME	6570	Introduction to Finite Element Methods GEC1: A-F REQUISITE: COURSE DESC: Examines the theory, derivation, and computer implementation of finite element methods for solution of boundary value problems. Study examples from heat conduction, solid mechanics, and vibration in one-, two-, and three-dimensional geometries. This fundamental approach will give users of finite element packages a deep understanding of both the power and limitations of FE techniques as well as providing a background to accurately use FE models. It will also provide a base for more advanced users to modify existing or write their own FE code. Use a programming language such as C or Matlab.	LEC	EL	3	0		N	G50		0
