

Cyclic Modules and the Structure of Rings

S.K. Jain, King Abdulaziz University, Saudi Arabia,
and Ohio University, USA, **Ashish K. Srivastava**,
Saint Louis University, USA, and
Askar A. Tuganbaev, Russian State University of
Trade and Economics, Russia

This unique and comprehensive volume provides an up-to-date account of the literature on the subject of determining the structure of rings over which cyclic modules or proper cyclic modules have a finiteness condition or a homological property. The finiteness conditions and homological properties are closely interrelated in the sense that either hypothesis induces the other in some form. This is the first book to bring all of this important material on the subject together.

Over the last 25 years or more numerous mathematicians have investigated rings whose factor rings or factor modules have a finiteness condition or a homological property. They made important contributions leading to new directions and questions, which are listed at the end of each chapter for the benefit of future researchers. There is a wealth of material on the topic which is combined in this book, it contains more than 200 references and is not claimed to be exhaustive.

This book will appeal to graduate students, researchers, and professionals in algebra with a knowledge of basic noncommutative ring theory, as well as module theory and homological algebra, equivalent to a one-year graduate course in the theory of rings and modules.

Readership: Graduate students, researchers, and professionals in mathematics particularly algebra, including algebraic geometry and algebraic topology.

OXFORD MATHEMATICAL MONOGRAPHS

2012 | 232 pages
Hardback | 978-0-19-966451-1 | £65.00 **£52.00**

- An encyclopaedia on the theory of the structure of rings under properties on cyclic modules
- Provides complete proofs of most of the core theorems
- Directions for future research are included
- Large number of examples
- Provides a list of open questions particularly for graduate students
