

**GIS STUDENT SAGAR MYSOREKAR,
CLASS OF 2006
REFLECTS ON HIS YEAR AT THE VOINOVICH SCHOOL**

Sagar Mysorekar applied to be a Graduate Assistant (GA) at the Voinovich School during his Master's in Geography program after a professor mentioned it was a good way to get experience in the field. During his time at the Voinovich School, Mysorekar worked on two major projects: a GIS database of water and sewer systems for Lebanon, Ohio, and updating maps for Athens County.

Mysorekar is currently working for the Nature Conservancy's Michigan and Great Lakes project, providing GIS and remote sensing support. He is focusing on GIS analysis, such as looking at water quality and finding ways to reduce sedimentation.

Mysorekar said that working with the Voinovich School was one of the best experiences he has had in years. "The Voinovich School work experience provided me with important GIS skill sets that helped me get a job," he said. "It helped me be truly professional, punctual, work under pressure, and manage multiple projects simultaneously."
