The Department of Physics intend to offer three-year Bachelor of Science degrees in Physics (BS3331), Physics Applied Physics (BS3332) and Physics Astrophysics (BS3335) as well as a three-year Bachelor of Arts degree in Physics (BA 3331). The curricula outlined below are semester-by-semester plans of study for the aforementioned degrees in adherence to section 3333.71 of the Revised Code for the three-year baccalaureate degrees.

The curricula given below show that High school students who apply with thirty semester hours of Tier I and Tier II credits (including the year Calculus and the first semester of Calculus-level Physics) from Advanced Placement (AP), transfer credit or other approved equivalent credit, will have finished the equivalent of the first year of our current program and would thus be able to finish the program within three years by successfully taking courses on the following schedules. The number of required credit hours could be reduced if students were able to take Freshman Composition or the Tier II courses or Foreign language in summer session or by taking a heavier course load during the academic year. The absolute minimum requirements to enter the program and graduate on schedule are to have equivalents to the first semester of Calculus (MATH 2301) and the first semester of Physics (PHYS 2051).

Note that these are sample curricula, and minor modifications in ordering of non-physics courses is probably possible while still finishing within the 3-year time frame. It is possible, but not guaranteed, that students with fewer that the suggested requirements for Calculus and Introductory Physics might be able to finish within 3 years, but this would require an intensity of Physics and Mathematics courses in senior year that only a small fraction of students would be able to complete successfully.

BS3338 Physics Meteorology is a program that has parallel versions of the program in Geography and Mathematics. Student take a heavy load of Physics, Math and Geography/Metrology courses. It is possible for an extremely well-prepared student with AP credit for the full year of Calculus, the first semester of calculus-level Physics, the first semester of chemistry, the equivalent of GEOG 1100 (Physical Geography) and computer programming to have the equivalent of the first year courses for this major, but the program has a tight grid of prerequisites and offers many of its courses in alternative years, so a student should only undertake a three-year degree in consultation with an advisor on an ad hominem basis. A detailed 3-year curriculum for this major is not included.

### BS3331 Physics Major and BS3332 Physics- Applied Physics Major*

NOTE: The requirements for Applied Physics are the same as those for Physics. In consultation with the Applied Physics Advisor, students can replace some of the upper division courses with courses from other majors to provide a more applied focus to their degree.

**BA3331 Physics Major**

The Physics BA is designed as preparation for high school teaching or for students in other majors who are looking for a second major. The program requires students to complete at least 24 credit hours of PHYS or ASTR courses including PHYS 1902, 2051, 2052, 2053 and MATH 2301. The curriculum below meets these requirements. Many other selections are also possible.

Elective 3 15

NOTE: ASTR 4201 & 4202 will be taught in Academic years that start with even numbers (e.g. 2012, 2014 etc.). ASTR 4271 will be offered in odd number years (e.g. 2013, 2015 etc.). Depending on the year they enter, students will thus take ASTR 4201 & 4202 in their junior or senior years.
