Federal regulations, market conditions and fuel diversification are changing the outlook for Ohio’s electricity generation and its transmission and distribution (T&D) infrastructure. These trends have implications for the many entities that contribute to the planning and maintenance of Ohio’s electricity infrastructure, and the users that expect and depend on a reliable source of electricity to support their operations.

Join us as we explore these changing conditions and how the PUCO, utilities, users and RTOs/ISOs are preparing for the next 50 years with the following experts:

- Benjamin Schlesinger, President, Benjamin Schlesinger and Associates, LLC
- Todd A. Snitchler, Chairman, The Public Utilities Commission of Ohio (PUCO)
- Pablo A. Vegas, President & Chief Operating Officer, AEP Ohio, American Electric Power
- Moderator: Michael J. Zimmer, Executive in Residence, CE3 & Senior Counsel, Thompson Hine, LLC

This webinar is free and open to the public. If you represent the regulated community, industry, state or local government, consumer groups, trade associations, energy & environmental organizations, or have a stake in Ohio’s energy future, we hope you’ll join us.

More information about CE3’s Energy Webinar Series can be found at: http://www.ohio.edu/ce3/news-events/events.cfm
