Established in the 1970s, the Athletic Training professional program has a strong tradition of producing successful athletic trainers. A wide variety of clinical experiences from intercollegiate athletics to high schools to performing arts. Opportunity to learn from experts in the field of athletic training.

Bachelor of Science in Athletic Training is a healthcare profession that specializes in the clinical diagnosis, immediate management, treatment and rehabilitation of acute, chronic or congenital musculoskeletal conditions. Athletic trainers (ATs) may be best known for providing healthcare services to high school, collegiate and professional athletes; but they can also be found in orthopedic clinics, industrial settings, military, NASA, performing arts, hospitals and physician’s offices. If you enjoy working with a physically active population, athletic training could be the career for you.

Clinical education is an exciting part of the learning experience that allows students to be involved in patient care. In addition, semester-long internships completed during the senior year allow you to work and learn in the setting of your choice. Successful completion of this professional program leads to a Bachelor of Science in Athletic Training and makes you eligible for national certification (ATC) by the Board of Certification (BOC) and state licensure.
