What to Expect When You’re Expecting... Hearing Aids

Did You Know?

Millions of people are exposed to work environments with dangerous sound levels. Some of these occupations include:

- Firefighters
- Military Personnel
- Disc Jockeys
- Subway Workers
- Construction Workers
- Musicians
- Factory Workers
- Mine Workers

Do you have a patient who has recently been diagnosed with hearing loss and hearing aids were recommended? If so, they must remember, “Getting a hearing aid is not a one-step process. Hearing loss is much more complex than other sensory losses, like eyesight.”

Here are some tips to suggest to your patients in order for them to have a successful hearing aid experience:

- Devote time and energy into using the devices.
- Learn how to properly care for your devices.
- Take the time to adjust to their use.
- Ask questions!!!

If they are new to hearing aids, they’ll hear sounds they haven’t heard for a long time. And although those sounds may not seem quite like they had before, their brain still needs time to adjust to those sounds again.

Now Offering:

Aural Rehabilitation Services

Hearing loss can cause many different emotions and social uncertainties for your patients, but we are here to help them through the process of adjusting to their hearing aid devices.

Please have your patients call our office if they are interested in this service.
