Joint Au.D./Ph.D. Option

Clinical doctorate in audiology degree applicants who are interested in academic careers and who demonstrate potential for doctoral study may request consideration for admission to the Joint Au.D./Ph.D. option. This option is designed for students who are certain they wish to pursue a Ph.D. and also complete the Au.D. degree. Upon completion, the student will have completed the clinical doctorate of audiology and a doctorate of philosophy in hearing science. This allows for maximum efficiency overall and permits the student to pursue research and clinical training simultaneously, rather than sequentially. The purpose of this program is to nurture and guide students with excellent potential while integrating clinical doctorate and doctoral coursework, research and clinical experiences.

The Joint Au.D./Ph.D. option is designed as a 6-year program. Years 1 through 4 of the student’s program of study will focus on integration of Au.D. coursework and doctoral-level courses, directed studies, and research. At the end of year 4 (or sooner depending on standing and progress), the student will apply for official entry into the Ph.D. program. Criteria to be accepted to the Ph.D. program include: a) cumulative GPA of at least 3.0; b) completion and presentation of the Au.D. research project; c) completion of pre-dissertation research project (or substantial progress made); and d) acceptable performance on work in research mentor’s lab. If accepted, the student will receive an award letter outlining your appointment for the PhD program. If the student chooses to apply to the Ph.D. program, the division of CSD will assist you with your Ph.D. application and pay your application fee to the Ph.D. program.

Year 4 of the joint will focus on finishing the coursework required for the Au.D. program, continued doctoral-level courses and directed studies. Years 5 and 6 will focus exclusively on completion of the PhD program.

Students also complete a 12-month clinical externship required for clinical certification as part of the AuD degree. The timing of the externship will be determined by the student in consultation with the student’s mentor and academic guidance committee.

Each student enrolled will work closely with an academic guidance committee to design an individualized program of study. Performance will be evaluated on a yearly basis. Students in this program will follow the guidelines for both the Au.D. and Ph.D. degrees with respect to Academic Guidance and Degree Requirements.

Interested students should apply to the Au.D. program. Admission to the joint option is contingent upon satisfactory completion of the following core undergraduate classes:

- Introduction to Communication Disorders
- Speech Science
- Anatomy/Physiology of Speech and Language
- Language Development
- Phonetics
- Hearing Science
- Basic Audiology
- American Sign Language I

IN ADDITION, ASHA requires students to have a course in each of the following content areas:

- Biological sciences (human or animal sciences)
- Physical Science (chemistry or physics)
- Social/behavioral sciences
