

Chemical Engineering Pre-Approved Technical Elective List

The courses listed below are preapproved for use as technical electives. If the course counts as a Track Elective, that is indicated (**M** = Materials track, **B** = Biological Track, **E** = Energy and the Environment Track).

If a course is pre-approved as a meeting the laboratory course requirement it is indicated with an **L**.

Courses not on the list may be taken with the **prior, written approval** of the Department of Chemical and Biomolecular Engineering. It is the responsibility of the student to ask, and provide the syllabus of the course.

If three hours of CHE 4931, 4932, 4933, or 4934 (Independent Study) are completed, it will count toward the Technical Elective hours. No more than three hours of these courses may be used. Three hours of the course Special investigation courses taken in other departments will be considered upon request, but must be approved, in writing, by your advisor or the department chair **prior** to undertaking the special investigation.

Some of the courses listed below have prerequisites listed within the parentheses which differ from those listed in the catalog. These alternate prerequisites have typically been accepted by the department teaching the course in place of those prerequisites listed in the catalog. The acceptance of alternate prerequisites is at the discretion of the individual course instructor. In general, other RCENT departments have accepted ChE courses in thermodynamics, heat transfer, and fluid flow in place of their courses. It is the responsibility of the student to check with individual instructors about course prerequisites.
