Which of our seven Geography majors is right for you?

Bridging the natural and social sciences, Geography is the interdisciplinary study of environments, and how people interact with the environment.

Environmental Geography – Are you a budding environmentalist? Whether it’s climate change, deforestation, or environmental justice that concerns you, we offer a diverse mix of human, physical, and techniques courses to prepare you for a rewarding career in the environmental field.

Environmental Pre-Law – Is a legal career in your future? But you also want to save the world from environmental disaster? Why not combine the two? It’s possible in the Department of Geography! You won’t find a program like this anywhere else in Ohio. For more info contact Dr. Jokisch at jokisch@ohio.edu.

Geographic Information Science – Do you love keeping up with the latest technology? Does the idea of analyzing, interpreting, and mapping satellite data appeal to you? Whether it’s the retreat of glaciers or the advance of urban sprawl you’ll be on the cutting edge with this major or certificate.

Geography – Are you a big picture person? You love studying volcanoes and earthquakes one day but are fascinated by the planet’s cultural and ethnic diversity too? Now you don’t have to choose! Explore Earth’s human and physical environments by earning a BA or BS in Geography.

NEW! Globalization and Development – Another world is possible! In fact, it’s already emerging across the “global south.” Globalization and Development majors are prepared to play a positive role in the social and environmental challenges facing Africa, Asia, and Latin America.

Meteorology – Warm fronts, cold fronts, hurricanes, tornadoes, climate change. Need we say more? Don’t forget to bring your calculus and physics textbooks with you. You’re going to need them! Forecasting and hands-on instruction in Scalia Laboratory are part of the package.

NEW! Urban Planning and Sustainability – Half the world’s population now lives “urban.” If we want to live more sustainably in the future, we need to make our cities more economically viable, liveable, and just places. Think Portlandia! Field opportunities in Baltimore and Edinburgh, Scotland.

For more information on any of our majors, contact Dr. Geoff Buckley, buckleg1@ohio.edu
