Building More Authentic Relationships

Authentic relationships are those that allow us to show our true selves. Authentic relationships at work have value because they reduce stress, allow us to feel more connected, and give our jobs meaning. It can be riskier at work to let our guard down and allow our limitations and vulnerabilities to show, so building authentic relationships must be a conscious process such as committing to the following steps:

Step 1: Do your job well and be a team player. Getting the work done is still priority one, and it’s critical to building a foundation of trust.

Step 2: Be genuine. People are attracted to those who are genuine because they project safety, honesty, acceptance, and a willingness to be vulnerable; in turn, their real personality becomes more visible. Genuine people are approachable, so growing relationships with them is easier.

Step 3: Show genuine interest in others’ needs and concerns.

Step 4: Notice how the reciprocity of coworkers grows more authenticity in your relationships with them.

Personalized Medical Guidance® (PMG) Corner

What should you know about popular health trends?

It seems like every few weeks there is media coverage of new health trends that promise to help you lose weight, lower your risk of health problems, or increase your longevity. When building your own approach to healthier eating, it’s best to rely on diets that are evidence-based. A health advisor can connect you with specialists who can help you create a nutrition plan that’s appropriate for you and designed to help you move closer to your health goals. Check out our article on Health Trends in Nutrition and read more at the PMG blog, accessed through the PMG tile of your EAP website.

Dealing with Difficult Situations at Work

Difficult situations at work—major errors, sudden change, conflicts, and emotional meltdowns—affect every workplace. A popular question in employment interviews is “Can you give me an example of a difficult situation and how you handled it?” Often full of drama, difficult situations (you know them when you experience them) require maturity, skill, and a cool head. Minimizing disruption to the workplace is the goal, and bosses typically know who they will turn to for help in managing difficult situations. Here are a few tips to help that person be you:

1. Challenges and curveballs happen at home and at work. Don’t be surprised by them. See conflict as normal and change as inevitable.
2. Accept these realities when they happen, and resist the impulse to emotionally respond to them.
3. Avoid being pulled into the drama of a difficult workplace situation.
4. Maintain a cool head by understanding that all crises, large and small, have beginning and end points; a resolution will come.
5. When focusing on resolution, avoid blame and over-attention to symptoms. Think: “What’s the real problem here?” to help identify the best approach.
6. Maintain an attitude of “opportunity found.” This “lens” or point of view will help you spot opportunities to make things better that can help prevent a recurrence of a similar difficult situation.

Flu and the Workplace Don’t Mix

The worst of flu season is not over. If you get the flu, stay home. If you know others who are sick with the flu, urge them not to come to work. The flu is not like a “super cold,” this year’s strain has killed even some who were extremely physically fit. The U.S. Centers for Disease Control and Prevention recommends you see your doctor if you have difficulty breathing, shortness of breath, chest or severe abdominal pain, confusion, or sudden dizziness. Don’t try to tough it out. Flu symptoms may be delayed for days after you are infected, but you can infect others before you know you are sick. To help avoid the flu, wash your hands; use disinfectant wipes; and avoid touching your mouth, nose, and eyes. Yes, the flu virus can enter your body through your eyes—for example, from rubbing your eye after touching an infected elevator button.

Sleep—A “Fountain of Youth”

Although there is no such thing as a “fountain of youth,” many researchers are convinced that quality sleep comes closest to its benefits. Seek help for sleep troubles from appropriate health resources. Start with a doctor, counselor, credible book, or your health and wellness advisor. Research studies on those who get better sleep show improved memory, reduced depression, improved self-confidence, lost weight, looking younger, increased creativity, improved mood, increased energy, prevention of cognitive decline in later life, reduced pain, better work performance, and even positive benefits in decision making leading to business and financial success. One study showed that 17 hours without sleep equates to an impaired brain with a .05 percent blood alcohol level. Visit www.MyImpactSolution.com for more sleep tips.
