Quick Start Guide:
IPEVO VZ-R Document Camera

To connect the camera to your computer:

1. Connect the small end of the USB cable to the USB/POWER port near the base of the camera.
2. Connect the other end of the USB cable to a USB port on your computer.
3. Turn the camera on by sliding the power button (located near the base of the camera) down.

Your computer may take a few minutes to recognize the camera. If your computer doesn't recognize the camera, make sure both ends of the USB cable are plugged in firmly and the camera power is on. Or, try restarting your computer with the camera already plugged in and turned on.

Once your computer recognizes the camera, you can use any software that you would normally use with a camera or webcam on your computer. If your computer is connected to more than one camera, you may need to choose the VZ-R camera in your application's settings. Use the controls on the base of the camera to make adjustments such as focus, zoom, and rotate.
