Setting up your Apple TV on the OHIO wired network

You will need:

- Ethernet cable
- Apple TV
- Computer
- OHIO ID and password

Note: The university’s wireless network does not support Apple TV’s Airplay feature. You can connect your Apple TV to the wired network, but you will not be able to stream content to it from your other devices.

Setup steps:

1. Plug Apple TV into the room’s Ethernet jack.
2. Connect your Apple TV to its power source and to your TV, make sure both are on, then go to the Apple TV’s main menu.
3. Navigate through the menu like this:
   a. Settings
   b. General
   c. Network
4. Your MAC address (Apple TV calls it your Ethernet Address) should appear at the bottom of the list on the network setup screen.
5. On your computer, open a web browser and log into
   https://webapps.ohio.edu/netreg/index.cfm
6. Enter your Apple TV Ethernet (MAC) Address (from Step 4 above) into the registration page on your computer.
7. Type something like “Apple TV” as a description.
8. Click “Register”
9. Scroll down and click “Agree”
10. Disconnect your Apple TV from its power source for at least 30 seconds, then reconnect it.
11. Enjoy your Apple TV!
