

Clinical Informatics Certificate

Accelerate your education. Advance your career.

**Affordable. Flexible.
Convenient.**

100% ONLINE

Taught by Domain Experts

Ohio University's College of Health Sciences and Professions offers a graduate-level Clinical Informatics Certificate, which focuses on how clinicians store, retrieve and analyze health information. In practice, knowledge of clinical informatics transforms the delivery of healthcare by creating information and communication systems to help clinicians design, implement and analyze health data to enhance individual and population health outcomes, improve patient care and foster efficient and effective clinician-patient interactions.

As medical facilities continually advance their electronic medical records systems, more skilled and trained clinical informatics professionals will be needed in the rapidly-growing healthcare industry. Employers hiring clinical informaticians often require at least a baccalaureate degree in a healthcare-related field and a graduate-level certificate in informatics.

At Ohio University's College of Health Sciences and Professions, you can obtain your Clinical Informatics Certificate at an affordable cost and in a 100% online format.
