Customer Relationship Manager (CRM) System Developer

The CRM System Developer position offers the student practical skills designing and coding enhancements to features and functionality within the Customer Relationship Management (CRM) cloud-based software system, Salesforce, currently the world's leading CRM vendor across multiple business sectors. This position's main task will be to serve as a student administrator and developer for the Salesforce system and build out functionality as requested by the Office of Global Opportunities.

This position is appropriate for a student who would like to continue to gain valuable practical skills in CRM development, business process management, and system building. This position is ideal for a computer science or MIS student who is interested in a career in information systems. Students who have worked in this position have gone on to professional positions in computer science and MIS fields.
