  - Course focuses on the nature of assurance services with an emphasis on evaluating the quality of information. Contemporary auditing techniques are explored with a focus on the entity's control systems. Course covers advanced issues which arise in audit practice including audit reporting issues, fraud detection and reporting, attestation engagements, special reporting issues, compilation and review engagements, scope of services issues, and other new issues which have a significant impact in audit practice.

- Forensic Accounting and Fraud Examination:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - This course is designed to help students apply their accounting, auditing, information systems and communication skills and build the forensic and examination skills needed to detect financial fraud, perform litigation support services and prepare a case for criminal proceedings or civil litigation. These skills are highly valued in the rapidly growing field of forensic accounting.

- Financial Accounting Theory and Research:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - An examination of the foundations and applications of accounting theory as it relates to financial accounting and reporting. The course draws upon existing research which provides evidence about the applicability of accounting theory to the financial reporting process for business enterprises which prepares financial statements in accordance with generally accepted accounting principles.

- Income Tax Research, Planning and Special Topics:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - Students learn how to research complex tax issues and engage in complex tax planning. The focus of the course is the application of these skills to current tax issues facing accounting practitioners.

- Professional Ethics and Communication for Accountants:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - This course is designed to help students in their ethical obligations and decision making to meet their responsibilities under the professions' code of conduct. These skills should help students ensure that their work meets the highest standards of integrity, independence and objectivity while challenging the ethical decision making by providing an examination of various ethical theories; identifying and resolving ethical dilemmas; the potential civil and criminal liability of accountants under both statutes and common law; civil and criminal liability in accounting practice; ethical issues and cases in accounting practice; issues and cases involving the Code of Professional Conduct. In addition, this course provides students an opportunity to assess a student's overall learning in the program. Specifically, this course provides a review of the material covered throughout the program and an opportunity to assess a student's overall learning in the program.

- Analytics for Accounting Decision-Making:
  - Seminar 3 credits, no repeat required.
  - GE1: A-F, Required.
  - This course is designed to help students develop and apply analytics concepts and critical thinking skills needed to use analytics for decision-making in the accounting profession. Data analytics and critical thinking skills are highly valued in the accounting profession. Upon completion of this course, students will understand the role of analytics in the accounting profession and demonstrate critical thinking when using analytics for accounting decision-making. Students will also be able to apply knowledge of data preparation, analytic techniques, visualization techniques, and basic skills in tools to extract data from accounting information systems and other sources and transform the data into usable information for accounting decision-making.

- Contemporary Topics in Accounting:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - This course is an application of the theory underlying financial accounting and reporting and the interrelationships between the different accounting sub-disciplines. Cases and problems are utilized to illustrate contemporary issues related to standard setting and financial statement measurement and reporting topics. Significant and rapid changes in accounting rules affect the financial reporting and analysis that management uses to make business decisions. This course explores contemporary accounting topics that accounting professionals face in the workplace and how the accompanying requirements change the way companies and their business partners use, report, analyze, and interpret financial data. Actual subjects covered vary as conditions change. This course serves as the Capstone Experience for our program. Specifically, this course provides a review of the material covered throughout the program and an opportunity to assess a student's overall learning in the program.

- Independent Study:
  - Ind Study 1 to 3 credits, no repeat required.
  - GE1: A-F, Required.
  - Research in selected fields of accounting under direction of faculty member.

- Financial Accounting Procedures:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - Fundamental accounting principles for service businesses and merchandising enterprises. Topics include the accounting cycle, financial statement preparation, and financial statement analysis. Analyzes the components of asset, liability and equity accounts. Covers the income statement, balance sheet, owner's equity statement and cash flow statement.

- Managerial Accounting Procedures:
  - Lecture 3 credits, no repeat required.
  - GE1: A-F, Required.
  - ATCH 1030
  - Accounting procedures for managerial accounting including job/process costing, cost behavior, budgeting, performance evaluation, differential analysis and capital investment.

*COURSE DESC:
- This capstone seminar is designed to accomplish three primary goals: 1) build deep business information system analysis and design skills in the context of ‘The Big Three’ (Enterprise Systems, Business Intelligence Systems and Collaboration Systems), 2) expand Information Systems knowledge base and understanding through intensive discussion and activities, 3) increase career readiness and networking skills.
- Special topics of current interest in the management information systems area.
- Management Information Systems related internship.
- Directed readings in Management Information Systems.
- Research in selected fields in management information systems under the direction of a faculty member. Student must submit a proposal and have it accepted by a faculty member before receiving permission to enroll.
- Honors thesis work.
- Special topics of current interest in the management information systems area.
- Graduate seminar in current Management Information Systems topics.
- Internship in Management Information Systems.
- Directed readings in Management Information Systems.
- Research under direction of faculty member.
- The course introduces students to information analysis and descriptive analytics. Students critically analyze business problems and develop high-quality information designs that inform and support management decisions using software tools. Topics include the organization of data, central tendency and dispersion, estimation and hypothesis testing, simple and multiple linear regression analysis, and the use of Excel in statistical analysis. Students learn to choose the proper analysis and present the results using effective information designs.

<td>A business environment. Business Analytics is the use, analysis, and interpretation of data to drive decision-making. This course teaches students how to apply problem-solving processes to a variety of business situations, think critically and analytically, and understand how to analyze the internal and external environments of business organizations. Students in this course gain an understanding of how analytical methods are used to help manage today's organizations. In addition, students use software that is commonly used in business to summarize and make inferences about data in order to support decision-making through data analysis.</td>

<td>Predictive Analytics is a form of analysis that aims to discover trends or patterns within datasets. The mathematical relationships that are found are used to make proactive, future-based, data-driven decisions. Predictive analytics is an important field of study because techniques that are used can find complex relationships that experts may overlook, or may not know at the time of the analysis. This course covers a variety of predictive analytics techniques and theories from the viewpoint of various business applications. To achieve the course learning objectives, students utilize software tools that are commonly used in business to develop, test, and apply continuous, classification and clustering models.</td>

<td>Predictive Analytics uses multiple techniques that recommend which course of action a decision maker should take within a business environment. The goal is to utilize these techniques to determine optimal strategies that can improve the results related to business decisions. In this course, students are introduced to concepts related to developing various linear and non-linear models within software tools that are commonly used by business professionals. Students apply optimization techniques to solve problems related to assignment, transportation, and network models as well as investigate other business scenarios that require additional theories such as integer and goal programming. In addition, students develop simulation models and utilize decision analysis strategies for conditions of uncertainty.</td>

**Course Description:**

- **Basic Personal Finance**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: Introduction to financial literacy, which includes understanding the sources of personal income and how consumers spend, manage risk and save. Methods for saving and investing will be presented. The importance of personal credit scores and consumer debt, including credit cards, automobile loans and home mortgages will be discussed. Topics will also include goal setting, household budgeting and major purchase decision making. There will also be a discussion of retirement planning and the various ways to prepare for retirement. Students will be trained to calculate mortgage and car loan payments and the value of an investment. The purpose of this course is to prepare students to solve personal financial problems and make good financial decisions.

- **Special Topics in Finance**
  - ELIGIBLE GRADES: GEC3: A-F, CR
  - REQUISITE: Specific course content will vary with offering.

- **Internship**
  - ELIGIBLE GRADES: GEC6: CR, PR, F
  - REQUISITE: Permission required and 2.5 GPA

- **Introduction to Corporate Finance**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: (ACCT 1005 or 1010) and WARNING: No Credit if taken after the following: FIN 2400 and 3100

- **Honors Experience in Honors Finance Seminar**
  - ELIGIBLE GRADES: GEC7: CR, F, NC
  - REQUISITE: Ohio Honors student and FIN 3001 concurrently

- **Financial Management**
  - ELIGIBLE GRADES: GEC3: A-F, CR
  - REQUISITE: ACCT 1000 and not COB and WARNING not (FIN 2400 or 2400)

- **Financial Statement Analysis and Financial Modeling**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: FIN 3000 AND (MATH 1300, 1350, or 2301)

- **Financial Markets and Institutions**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: FIN 3000 AND (MATH 1300, 1350, or 2301)

- **Risk and Insurance**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: Social importance of risk and its place in personal, business, and national life, including principles and methods of handling risk. Special interest in technique of insurance.

- **Investments**
  - ELIGIBLE GRADES: GEC1: A-F
  - REQUISITE: FIN 3000 AND (MATH 1300, 1350, or 2301)

- **Internship**
  - ELIGIBLE GRADES: GEC6: CR, PR, F
  - REQUISITE: Permission required and 2.5 GPA

ELIGIBLE GRADES: GEC1: A-F
REQUISITE: Senior

COURSE DESC:
This course meets weekly with the objective of preparing CFA Level I candidates. Class meetings discuss study goals for the upcoming week and review the expectations for the previous week. A variety of topics of covered by the exam and course related to finance, economics, and ethics. The CFA curriculum is robust, and this course emphasizes study plans and techniques that required for successful exam completion. The course encourages a positive, group-focused, learning environment as students prepare for the CFA Level I exam. Students are encouraged to help one another succeed. A mock exam is administered on a Saturday from 8am-5pm, which replicates the actual exam setting.

<td>The OICP experience gives you an opportunity to leverage your existing business skills and develop new ones in a challenging international environment. Student teams develop and implement a strategy for completing their assigned project in a fashion that satisfies the client and meets the course objectives. This course also provides students with intercultural knowledge and competence. OICP helps students to increase their own cultural self-awareness within worldwide frameworks. Students grow in cultural openness and curiosity while expanding their communication skills.</td>

<td>Students in second year of the program begin to collect various leadership experiences both inside and outside of the program. Their principles are at the core of these experiences. Students at this level understand their leadership style and are learning how to be effective when interacting with different individuals and situations. Using the Covey model, students are independent and working to achieve Public Victory. Students will focus on the Leadership Practices inventory behavior Challenge the Process. They are expected to search for areas for improvement in both themselves and their organizations. They are encouraged to experiment by taking on different leadership opportunities.</td>

<td>The course is about discovering who a participant is, as a person, and as a leader. During the semester, students are introduced to principle-based leadership, self-discovery and self-awareness. Students are asked to define their principles and values and identify their leadership style. On Stephen Covey's model of The 7 Habits, students recognize how to move from dependency to interdependency, and discover who they are as an individual. Next, students participate in a 2-part intensive career management seminar, which includes career interest inventory and other career management tools. Students then participate in the Big 5 Personality Assessment. Finally the students discover their own authentic leadership approach through the study of True North, taking part in leading sessions with their colleagues.</td>

<td>Emerging Leaders II is designed to provide students with the tools and skills they need to become effective leaders. Students participate in a series of sessions entitled Speak as Well as You Think, based on the work of John Vautier. These sessions are designed to improve the speaking and message delivery of leaders. Students are videotaped and provided one on one feedback regarding their message and delivery of the message. Students participate in designing new ways of thinking about challenging the process and innovation through a series of sessions around lean thinking, value stream mapping, problem solving, and innovation. Lastly, students participate in a series of sessions, based on the book by Kouzes and Posner entitled The Leadership Challenge. Students lead each of the sessions and engage their colleagues in discussions and experiential exercises to more deeply understand and practice the behaviors necessary to be an effective leader.</td>

<td>The senior year in the program focuses on establishing a legacy. A key element of the Select Leadership Development Program is servant leadership, which is exemplified during the senior year of the program. Seniors are the leaders of the program and are essential to the growth of the sophomores and juniors. Seniors reflect on their development in the program and share their experiences with younger members. The goal of seniors is to achieve Interdependence in Covey's 7 Habits model. Seniors focus on the Leadership Practices Inventory behavior Enable Others to Act. They recognize potential in younger members and empower them to grow in their leadership.</td>

<td></td>
<td></td>
<td></td>
<td>This course covers the law regulating the manufacture, distribution, and sale of food products in the United States. The emphasis is on food safety law, but safety is often intertwined with many other aspects of U.S. food regulation. Topics covered include the regulation of labeling, advertising, food additives, dietary supplements, genetic modification, HACCP, civil and criminal liability for defective products, inspections, importation and exportation, and food disparagement laws. The course is designed to give students a better understanding of the issues involved in the regulation of food and a general understanding of the full scope of food safety regulation in the United States, and gaining skill in analyzing how the law applies to the facts of a novel situation.</td>

<td>COURSE DESC: Business analytics can be subcategorized into three primary fields of study. These fields include descriptive, predictive, and prescriptive analytics. Descriptive analytics serves as a foundation to all other forms of analytics. The primary goal of this course is to provide students with the skills to effectively summarize, visualize, and manage data within software environments that are commonly used in various business contexts. In this course, topics include, but are not limited to, measures of central location, measures of dispersion, discrete and continuous probability distributions, hypothesis tests, as well as data visualization. In addition, students are introduced to predictive and prescriptive analytics topics for business applications.</td>

<td>COURSE DESC: Prescriptive analytics includes a variety of topics related to decision-making within the context of business problems and applications. The primary goal of this course is to develop a model of a business scenario within a software environment. Students employ mathematical techniques that support or automate a course of action that should be taken by decision-makers. In this hands-on course, students are introduced to concepts related to constructing, testing, and applying prescriptive models and techniques that are common in business settings. From this perspective, students utilize software tools in order to apply a variety of decision-making techniques, including optimization and simulation.</td>

### MBA Core IV
- **ELIGIBLE GRADES:**
- **COURSE DESC:** Modular content of business-related subjects. Consists of 6 cr hrs of international business, including a study abroad experience. Units may be substituted or added from other 600-level business courses based on current business environment.
- **Lecture:** 6 cr hrs
- **Repeat:** 12 cr hrs
- **Perm:** N
- **GEC:** 1 to 3
- **G40:** 0

### MBA Experiential Learning
- **ELIGIBLE GRADES:**
- **COURSE DESC:** Applied learning experience in which students consult with various real organizations. Students set appropriate project scope, identify business problems to address, analyze the organization's current situation and context, and recommend solutions.
- **Lecture:** 1 to 12 cr hrs
- **Perm:** N
- **G40:** 0

### Consulting Capstone and International Immersion
- **ELIGIBLE GRADES:**
- **COURSE DESC:** This course is designed for the student to further develop and synthesize business skills in order to apply them to real-world client engagements. Students examine and apply the skills needed to succeed in business consulting, such as decision models, team management, international business research, international marketing, consulting basics, project management, interviewing, and preparation and presentation of client deliverables. Capstone simulates and is essential preparation for the international consulting experience.
- **Lecture:** 3 cr hrs
- **Perm:** N
- **G40:** 0

### New Venture Planning
- **ELIGIBLE GRADES:**
- **COURSE DESC:** New Venture Planning is designed to engage MBA students in a process of ideation, business model generation, market validation and venture pitching. The course begins by engaging students in a process of ideation. During this step in the process the class is introduced to a range of different ideation techniques and uses them to generate a large number of venture opportunities. Ideas generated go through a screening process and teams are formed around the leading venture ideas as assessed by the class. Teams are then introduced to the business model canvas and then develop initial business models for their ideas. Next, student teams in a "lean launch" process. During this stage teams engage in validation research to confirm and amend their initial business models and provide supporting customer and other validation for their intended approach. Finally, student teams develop their pitches, trade shows, pitch decks and other materials and engage in a "shark tank"-like competition to propose their ventures to prospective investors. The class is a "learning by doing" and "problem-based learning" class. Students are expected to engage on a full-time basis for the duration of the class and the class is designed to give MBA students an accelerator-like experience.
- **Lecture:** 3 cr hrs
- **Perm:** N
- **G40:** 0

Managing Intercultural Effectiveness in Organizations
GEC1: A-F
REQUISITE:
This course provides a comprehensive foundation for understanding and successfully interacting in today's multi-faceted, cross-cultural organizations. Attention will be given to individual, team, and organizational dynamics, providing students with a skill set of competencies designed for intercultural effectiveness in a globalized workforce and for enhanced career success.

Special Topics in Management
GEC3: A-F, CR
Specific course content will vary with offering.

Principles of Operations
GEC1: A-F
REQUISITE: Not COB major except BS 5511 and WARNING; No credit for this course if taken after MGT 3200
Emphasis is on providing a conceptual understanding of the operations function, which includes: product/process design, facility location and layout, capacity planning, material and inventory management.

Applied Management and Supervision
GEC1: A-F
REQUISITE: Not COB major except BS 5511
Application of management techniques to first line supervision and mid-level managerial roles. Topics include managerial planning, organizing and delegating work, leading, decision-making, motivating and evaluating performance, and human resources management.

Values, Business Ethics, and Corporate Responsibility
GEC1: A-F
REQUISITE:
This course enables students to prepare themselves to act in accordance with their ethical intentions when business issues with ethical ramifications arise. It exposes students to corporate responsibility and business ethics through reading, discussion, research, and reflection. However, this course is about more than the narrow question "What should I do?" Primarily, it is about our desire to live a good life--a life that is successful, honorable, and full of meaning. As such, this course will help students contemplate the overarching question "How do I want to live my life?"

Operations Management
GEC1: A-F
REQUISITE: (QBA 2720 or 2010 or MATH 2500) and COB. No credit for MGT 3000 if taken after MGT 3200
More than any other function, operations provides an organization with the capability to compete successfully in the global marketplace. With proper operations management, the firm can provide a product or service of higher quality in less time and at less cost than the competition. Emphasis on conceptual understanding of the operations function and includes the following topics: product/process selection and design, facility location and layout, capacity, material and inventory management.

Honors Experience in Operations Management
GEC7: CR, F
Ohio Honors student and MGT 3200 concurrently
Ohio Honors curricular experience in Operations Management

Project Management
GEC1: A-F
REQUISITE:
Often we are involved with developing a new system, a new product, planning an event, or participating in an undertaking where we cannot simply repeat things we have done in our past experience. These are "one-offs" or Projects. Projects are major undertakings that have a defined life time (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration. It is important to understand and appreciate the techniques and concepts used for successful project management. This course covers some of the basic issues related to, and tools used for, managing projects, and provides an opportunity for students to learn application of the tools and concepts of project management.

Sustainable Supply Chain Management
GEC1: A-F
REQUISITE:
This course provides a survey of concepts and issues involved in managing an organization's supply chain and its sustainability over the long run. Managing resources and supply chain dynamics are key foci of this course. Among the issues discussed are the strategic role of a supply chain, key strategic drivers of supply chain performance and common problem-solving approaches that help supply chain and logistics professionals make better decisions that contribute to the long run sustainability of the organization and its supply chain. Topics include supply chain design, planning, and operation, facilities, inventory, transportation, information management, and coordination in a Sustainable Supply Chain.
Human Resource Management
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3300
COURSE DESC: Survey of human resource management practices in areas of human resource planning, recruitment, selection, training and development, performance appraisal, compensation, discipline, safety audits, and personnel research. Includes applications in employment law and discussion of interference of line and staff responsibilities in organization.

Organizational Behavior
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3400
COURSE DESC: This organizational behavior course is designed to provide students with a foundation for understanding the impact of groups and organizations on and organizations. Understanding and effectively functioning within complex organizations is a key competency for today's business leaders. The course will cover many of the fundamental topics that leaders need to understand including, leadership, motivation, conflict, negotiation, stress management, managing diversity, and much more. Students will learn relevant theoretical and factual information and will participate in numerous active learning activities. Critical thinking is emphasized through hands-on activities, exercise discussions and cases that will help to build familiarity with key concepts. Students will study and learn about human behavior in organizations.

Managing High Performance Teams
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 50

ELIGIBLE GRADES: MGT 3410
COURSE DESC: Teams are increasingly used in business to tackle more challenging issues that require a diverse set of skills. Strong teams require capable leadership, attention to process, innovative ideas, excellent communication, and an appreciation for different skills and work styles. While much is known about what makes some teams more successful than others, few people are trained in how to effectively create, build, and manage teams. This course focuses on learning and best practices in team formation, working on a team, and leading teams. Throughout the course students use readings, discussion, cases, action learning exercises, and team projects as a platform to dissect common team issues, and the strategies and tactics to overcome these challenges.

Leadership in Practice
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: BLD
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3435
COURSE DESC: This course enables students to develop their perspectives, skills, and techniques to put strategic leadership into practice. It draws on the broad concepts of strategic leadership of knowing business or industry from multiple perspectives; demonstrating agility or cognitive flexibility to set and achieve goals; mobilizing leadership of self and others through collaboration, communication, and teamwork; and executing analysis to competitively drive results to create a viable future. This course uses prelection, reading, research, lectures, discussion, reflection, and active and experiential learning, culminating in a semester-long, team-based leadership simulation focused on sustainability.

Entrepreneurial Leadership
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3450
COURSE DESC: Students will be exposed to the concepts and theories about leadership at the individual level and will have an opportunity to build and enhance their leadership skills.

Theories of Organizational Effectiveness
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3500
COURSE DESC: Macro-organizational view emphasizing organizational theory. Concentrates on interaction among organization, its environment and its members, and the importance of fit among organizational strategies, structures, and culture.

Creativity and Innovation Management
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3550
COURSE DESC: Examination of the role of creativity and innovation in business with a particular focus on the management of the innovation process. Students will explore personal creativity, management practices that enhance or suppress creativity, the relationship between creativity and innovation, and the process of innovation in a business setting.

Foundations of Festivals, Events and Entertainment Management
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 50

ELIGIBLE GRADES: MGT 3580
COURSE DESC: This course is a comprehensive overview of festivals, events, and entertainment management entailing an interdisciplinary focus on sports, recreation, arts, culture, and tourism. The course provides foundational content in relation to the history and scope of events, event impacts, and core components of planning, implementing, and evaluating within the festival, event, and entertainment industry.

Introduction to International Business
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: 2CP
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3600
COURSE DESC: An introductory course to the study of the special terms, concepts, and institutions associated with the environment in which multinational companies emerge, the nature and scope of their operations, and their economic, political, and social impact.

Cultural Intelligence in Business
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: 2CP; BDP
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3640
COURSE DESC: The course focuses on improving students cultural intelligence in business situations. The course reviews the components of cultural intelligence drive, knowledge, strategy, and action and offers strategies for increasing intercultural knowledge and competence in global, diverse business settings.

International Market Assessment and Entry
Component: Lecture
Cred Hours: 3
Repeat Hours: 0
General Education: N
Perm: U30
Subsidy Level: 0

ELIGIBLE GRADES: MGT 3650
COURSE DESC: Examination of concepts, frameworks and tools for assessing international market opportunities and for selecting and implementing appropriate means of international market entry.

<td>This course is for entrepreneurs building the courage to create, and risk making mistakes in their quests for true innovations in products, services or processes. You will solve problems in uncertain and dynamic environments. Creativity is the central focus, which might be defined as applying your mental ability and curiosity to discover something new, the act of relating previously unrelated things. More specifically, we focus on capitalist creativity. This means that we must apply a Business Model framework to your creativity. We demand that your solutions be profitable (have a potential to be profitable) and reflect bottom-line practicality. More importantly they must create value. We provide challenging places to fully engage your brain to discover patterns to produce breakthrough ideas that solve business problems.</td>

<td>This course provides real world, hands-on learning on the process of actually starting a company, applying the Lean StartUp methodology. Our goal, within the constraints of a classroom and the time available is to create an entrepreneurial experience with all of the pressures of an early stage start-up. The class is designed to give you the experience of how to work as a team and turn an idea into a company. You will talk to customers, partners and competitors as you encounter the uncertainty of the start-up process. You will practice evidence-based entrepreneurship as you learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than you would want/use your product or service. Finally, based on the customer and market feedback you have gathered, you will use agile development to rapidly iterate your product or concept to build/design something customers would actually buy and use. Completion of this course is necessary for teams who wish to compete for admission to Ohio University’s Innovation Engine Accelerator mentoring program, grant and investment funding opportunities via TechGROWTH Ohio and admission to other mentoring and funding opportunities designed to help start ventures at Ohio University.</td>

<td>This course examines the latest theories, concepts and applications for building a talent mindset, culture and process for assessment, development and engagement of human capital. Students will have the opportunity to view talent management from an enterprise or CEO perspective, thus understanding the strategic significance of talent for delivering extraordinary business results. We will investigate talent performance and potential assessment methods, leadership succession planning, engagement practices, talent analytics, diversity acquisition sciences and global people systems. We will utilize historical and modern perspectives of talent management, as well as numerous theories related to talent along with real time current events. A variety of case studies, simulations and in-class exercises will be used to provide practical examples of effective and ineffective talent management. Throughout the course students will be asked to explore this material from a personal perspective and encouraged to gain insights into the kind of talent leader they would like to become.</td>

<td>intended to be a challenging and exciting capstone course for the undergraduate business curriculum. It is first and foremost a course about &quot;strategy&quot; and about &quot;managing for success&quot;. The course is centered on the theme that a company achieves sustained success if and only if its managers effectively formulate and implement an astute strategy. We will explore how and why doing a good job of strategy formulation and strategy implementation produces good business performance. The course will also integrate much of the knowledge gained in the business core curriculum, pulling together the multiple disciplines that you have taken in the core. In addition, this course will be writing intensive and will require you to submit, revise, and resubmit written work to demonstrate professional level skills.</td>

<td></td>
<td></td>
<td></td>
<td>REQUISITE: This course examines the principles of judgment and choice in the face of uncertainty. Students are introduced to normative (i.e., how best to decide) and behavioral decision making (i.e., how do we decide). The latter approach recognizes that people use various tricks (i.e., heuristics) that simplify cognitive processing. While these serve well in some instances, they may also become traps that lead to poor results in others. Extensive study of bias helps students to recognize these tendencies and become better decision makers following a third approach known as prescriptive decision making (i.e., how should we decide).</td>

### MGT 5020 Operations & Project Management

**COURSE DESC:** This course examines the ramifications of ethical and legal issues between employers and their employees, unions, independent contractors and customers. The focus is on the role of the manager in ensuring both ethical practice and legal compliance in all areas of managing the human resources in an organization.

**ELIGIBLE GRADES:** GEC1: A-F

**REQUISITE:** Admission to Master's of Science in Management or MBA program or Certificate program CTOAMG

**Component:** Lecture 3

**Credits:** 0

**Repeat:** N

**General Education:** G40

**Perm:** 0

### MGT 5021 Management of Lean Six Sigma Programs

**COURSE DESC:** Projects are major undertakings that have a defined lifetime (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration. It is important to understand and appreciate the techniques and concepts used for successful project management. This course covers some of the issues related to projects, working on project teams and tools used for managing projects.

**ELIGIBLE GRADES:** GEC1: A-F

### MGT 5025 Supply Chain Project Management

**COURSE DESC:** Projects are major undertakings that have a defined lifetime (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration. It is important to understand and appreciate the techniques and concepts used for successful project management in business organizations. Strategically managing projects combines technical skills with behavioral approaches as well. This course covers issues related to successful project management in business organizations and provides an opportunity for students to learn and apply tools and concepts of project management. This course guides students through the fundamental project management tools and managerial behavior skills necessary to successfully launch, lead, and realize benefits from projects.

**ELIGIBLE GRADES:** GEC1: A-F

**REQUISITE:** Admission to COB graduate or certificate program or permission

**Component:** Lecture 3

**Credits:** 0

**Repeat:** N

**General Education:** G40

### MGT 5030 Employee Relations, Ethics & Legal Aspects of HRM

**COURSE DESC:** Projects are major undertakings that have a defined lifetime (i.e. limited duration) and a specific outcome. As such, they require a unique approach to management and administration. It is important to understand and appreciate the techniques and concepts used for successful project management in business organizations. Strategically managing projects combines technical skills with behavioral approaches as well. This course covers issues related to successful project management in business organizations and provides an opportunity for students to learn and apply tools and concepts of project management. This course guides students through the fundamental project management tools and managerial behavior skills necessary to successfully launch, lead, and realize benefits from projects.

<td>This course is a deep dive into the strategic management aspects of talent acquisition, development and succession planning for organizational performance, sustainability and longevity. The course examines talent management from the enterprise or macro firm perspective and then share specific processes and tools for delivering results. Through agile teaming, complex business cases and in-class conversations with talent management scholars and executives, students investigate the essential contribution of talent for executing business strategy while ensuring individual, team and cultural alignment aspects. The course utilizes historical and modern perspectives of talent management, as well as numerous theories of human resource management and organizational behavior. For learning discovery, the course instructional design features a strong focus on team-based projects, consultative case analysis, simulations and in-class discussions to provide practical examples of effective and ineffective strategic talent management. Course content is explored from both a personal perspective and a professional business manager, or human resource professional perspective.</td>

<td>Business and management can no longer be defined as purely local or domestic in scope. Globalization has made an understanding of the international context a critical element in any manager's knowledge base. This course exposes students to the challenges confronting organizations as they seek to enter and operate in the multiple business environments and cultures that characterize the global economy today, and provides them with conceptual models and analytical approaches for problem solving and decision making in the global context.</td>

<td>American business is international business; one third of the U.S. corporate profits are generated abroad. Yet billions of potential business dollars are lost every year because we ignore the expectations of people in foreign cultures, and the way that they do business. This course provides a framework for understanding cross cultural differences and using such knowledge in developing country specific management practices and policies. Moreover, it provides a guide for dealing with managerial issues associated with cross national environments, organizational design and adaptation, as well as those concerns of developing global talent, social responsibility and ethical behavior.</td>

<td>This organizational behavior course is designed to provide students with a foundation for understanding the impact of people and groups in and on organizations. Understanding and effectively functioning within complex organizations is a key competency for today's business leaders. The course will cover many of the fundamental topics that leaders need to understand including, leadership, motivation, conflict, negotiation, stress management, managing diversity, and much more. Students will learn relevant theoretical and factual information and will participate in numerous active learning activities. Critical thinking is emphasized through hands-on activities, exercise discussions and cases that will help to build familiarity with key concepts. Students will study and learn about human behavior in organizations.</td>

<td>In this course students will be challenged to find, evaluate, and develop raw technical ideas into commercially viable product concepts, and build those into business propositions. Many technologies are developed in research laboratories that never make the transition to commercialization, often due to lack of business expertise by the scientists, engineers, or other technologists who develop them. The goal of this course is to bring the focus to commercializing such discoveries.</td>

**ELIGIBLE GRADES:**
GEC6: CR, PR, F
**REQUISITE:** SAM 3905 and permission required

**COURSE DESC:**
The purpose of the course is to provide students with a format for reflection while they perform a professional internship. The internship will enhance the student's ability to achieve their personal career objectives. Also, the internship experience will provide opportunities for participation in day-to-day activities of a business concern for 15 consecutive weeks. (Intended for experience)

| COB     | MGT  | SAM  | 3920  | Business Application Simulation     | Practicum | 3           | 0            | BLD               | N    | U30     |               |                  |

**ELIGIBLE GRADES:**
GEC1: A-F
**REQUISITE:** (SAM 3010, 3020, 3100) and (BA 2000 or SAM 3905)

**COURSE DESC:**
Students operate a simulated company and compete head-to-head against companies in the same industry run by other students in the class. The companies compete in a global market arena in four geographic regions including Europe-Africa, North America, Asia-Pacific, and Latin America. The manager(s) of each company are responsible for assessing market conditions, determining how to respond to the actions of competitors, forging a long-term direction and strategy for their company, forecasting upcoming sales volumes, and making decisions including to workforce compensation and plant operations, capacity expansion, distribution center operations and inventory management, pricing and marketing, finance, and corporate social responsibility/citizenship.

| COB     | MGT  | SAM  | 4700  | Managing Strategically in the Future| Lecture   | 3           | 0            | 3; CAP            | N    | U30     |               |                  |

**ELIGIBLE GRADES:**
GEC1: A-F
**REQUISITE:** SAM 3010 and 3100 and Sr

**COURSE DESC:**
The course is intended to be a capstone course. The course centers around the theme that a company achieves sustained success if its managers (1) formulate an astute game plan (2) implement and execute the game plan with proficiency. The course will prove how and why doing an effective job of strategy formulation and strategy implementation produces good business performance. In studying the tasks of strategic management, the course will integrate the knowledge students have gained from previous courses. Strategic management requires dealing with many variables and situational factors at one time. The students will be able to weigh the pros and cons of what strategy entails: a total enterprise perspective and a talent of judging how all of the relevant factors add up to shape the actions needed to take place in a business.

### Course Listing

#### Applied Sports Sponsorship Project
- **Department**: COB SA
- **Course Code**: SASM 6575
- **Eligible Grades**: CR, PR
- **Course Description**: Applied Sports Sponsorship Project
- **Component**: Seminar
- **Credits**: 2
- **Hours**: 0
- **Repeat**: CR, PR

#### Revenue Generation in Sport
- **Department**: COB SA
- **Course Code**: SASM 6580
- **Eligible Grades**: CR, PR
- **Course Description**: Revenue Generation in Sport
- **Component**: Lecture
- **Credits**: 3
- **Hours**: 0
- **Repeat**: CR, PR

#### Sport Business Revenue Strategies
- **Department**: COB SA
- **Course Code**: SASM 6585
- **Eligible Grades**: CR, PR
- **Course Description**: Sport Business Revenue Strategies
- **Component**: Lecture
- **Credits**: 3 to 4
- **Hours**: 0
- **Repeat**: CR, PR

#### Governance in Intercollegiate Athletics
- **Department**: COB SA
- **Course Code**: SASM 6650
- **Eligible Grades**: CR, PR
- **Course Description**: Governance in Intercollegiate Athletics
- **Component**: Lecture
- **Credits**: 3
- **Hours**: 0
- **Repeat**: CR, PR

#### Human Resource Management in Sport Organizations
- **Department**: COB SA
- **Course Code**: SASM 6670
- **Eligible Grades**: CR, PR
- **Course Description**: Human Resource Management in Sport Organizations
- **Component**: Lecture
- **Credits**: 3
- **Hours**: 0
- **Repeat**: CR, PR

#### Financial Management for Sport Administration
- **Department**: COB SA
- **Course Code**: SASM 6700
- **Eligible Grades**: CR, PR
- **Course Description**: Financial Management for Sport Administration
- **Component**: Lecture
- **Credits**: 3
- **Hours**: 0
- **Repeat**: CR, PR

#### Research Methods in Sports Administration
- **Department**: COB SA
- **Course Code**: SASM 6600
- **Eligible Grades**: CR, PR
- **Course Description**: Research Methods in Sports Administration
- **Component**: Lecture
- **Credits**: 3
- **Hours**: 0
- **Repeat**: CR, PR

#### Introduction to Sport Analytics
- **Department**: COB SA
- **Course Code**: SASM 6850
- **Eligible Grades**: CR, PR
- **Course Description**: Introduction to Sport Analytics
- **Component**: Lecture
- **Credits**: 3 to 4
- **Hours**: 0
- **Repeat**: CR, PR

#### Contemporary Issues in Sport Administration
- **Department**: COB SA
- **Course Code**: SASM 6880
- **Eligible Grades**: CR, PR
- **Course Description**: Contemporary Issues in Sport Administration
- **Component**: Lecture
- **Credits**: 1 to 3
- **Hours**: 6
- **Repeat**: CR, PR

#### Special Topics in Sports Administration/Sports Management
- **Department**: COB SA
- **Course Code**: SASM 6900
- **Eligible Grades**: CR, PR
- **Course Description**: Special Topics in Sports Administration/Sports Management
- **Component**: Lecture
- **Credits**: 1 to 15
- **Hours**: 999
- **Repeat**: CR, PR

#### Internship in Sports Administration
- **Department**: COB SA
- **Course Code**: SASM 6910
- **Eligible Grades**: CR, PR
- **Course Description**: Internship in Sports Administration
- **Component**: Field
- **Credits**: 1 to 6
- **Hours**: 6
- **Repeat**: CR, PR

## Assessing Digital Media Transformation & Innovation
- **Title:** Assessing Digital Media Transformation & Innovation
- **Component:** Lecture
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** GEC1: A-F
- **COURSE DESC:** Prepares students to engage digital media transformation within professional contexts. Students work to implement innovative digital media solutions with emphasis placed on critical analysis of new technologies and real-world benefits of disruptive media. Special emphasis is placed on networking, peer-evaluation, and media-centric business model frameworks.

## Strategic Communication Fundamentals
- **Title:** Strategic Communication Fundamentals
- **Component:** Seminar
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** GEC1: A-F
- **COURSE DESC:** The course introduces students to the field of strategic communication. Students examine and apply theories, concepts, and frameworks employed in a contemporary professional setting. This course is one of three courses which fulfill the requirements of the Strategic Communication Management graduate certificate.

## Media Planning Fundamentals
- **Title:** Media Planning Fundamentals
- **Component:** Seminar
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** GEC1: A-F
- **COURSE DESC:** Students identify and create the key components of a media plan. Students develop an integrative media plan, drawing on both digital and traditional media. Students identify, prepare, critique, and assess comprehensive media plans in various professional contexts.

## Introduction to Graduate Research in Communication
- **Title:** Introduction to Graduate Research in Communication
- **Component:** Seminar
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** GEC1: A-F
- **COURSE DESC:** This course provides an overview of the communication discipline and key research issues and methods in different areas of the field.

## Master's Capstone
- **Title:** Master's Capstone
- **Component:** Thesis
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** G40
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **REQUISITE:** GEC4: A-F, CR, PR
- **COURSE DESC:** In consultation with an advisor and program committee, students select and complete a capstone experience that fits with their professional and academic goals: applied project or e-Portfolio.

## Seminar in Political Communication
- **Title:** Seminar in Political Communication
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Permutation:** U30
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC2: A-F, PR
- **REQUISITE:** GEC2: A-F, POCO 2010
- **COURSE DESC:** Senior-level research course investigating selected aspects of political communication.

<td>REQUISITE: GEC1: A-F, Soph or Jr or Sr This course explores the ways technology shifts traditional conceptions of organizations and organizing. Specifically, the course explores three themes: 1) Ways organizations use social media for communication with external stakeholders, 2) Ways organizations use technology to facilitate internal communication processes, and 3) Ways that technology creates and sustains new forms of organizing. Discussion and readings address the social, technical, and psychological factors related to the use and adoption of communication technologies. Students are encouraged to draw on personal experiences with organizations and explore opportunities or threats organizations may face while adjusting to the challenges posed by online technologies.</td>

<td>Students will apply statistical methods to critically analyze communication research literature. Students engage in a theoretical and applied exploration of a wide range of voices (e.g., Citizen and community groups, Greens, corporations and lobbyists, scientists, anti-environmentalists, public officials and regulators, journalists) and a variety of environmental issues (e.g., climate change, water and air quality, genetic engineering and nanotechnology, mountaintop removal, logging, endangered species and extinction). Topics might include the social construction of nature; human relationships with nature through discourse, rhetoric, and communication practices; critical and cultural approaches to environmental discourse; communication about environmental issues in organizations, mass media, political, and international contexts; communication around environmental controversies; stakeholder dialogue and conflict; public understanding of environmental issues; public participation in environmental decision-making; environmental risk communication; environmental campaigns; and environmental advocacy, deliberation, and public relations. Main aim is to engender understanding of how communication constructs nature, threats to the natural environment, disputes about threats, and ways of living in the natural world.</td>

<td>This course is designed to provide a cultural studies approach to beer, a common commodity in the United States and abroad. Specifically, this course examines how communication influences and is influenced by the production, consumption, representation, and distribution of beer, and how communication intersects with issues of identity in beer choices in the processes. Students study multiple theoretical, conceptual and methodological approaches to understanding this intersection of communication and an important artifact of public culture. The course requires students to think critically about their own and others’ interaction with beer.</td>

<td>Course takes a specific theoretical approach to the critique of rhetoric as expressed in and by contemporary culture. The goal will be to explore the rich variety of rhetorical expression current in our lives. The reading list will encompass such topics as the critique of hate speech, the critique of whiteness, as well as focus on the discourse of African American, Native American, Latina/Latino cultures. Student projects will focus on one or more of the areas of inquiry with a goal of understanding and critiquing the role of rhetoric in the perpetuation and alteration of a culture.</td>

Seminar 1 2 N G50 0

**ELIGIBLE GRADES:** GEC2: A-F, REQUISITE: COMS major

**COURSE DESC:** The professional seminar serves to orient students to graduate school and provide forums to discuss what it means to be a scholar, teacher, citizen, and/or communication practitioner.

**COM COMS COMS 7003**

**Professional Seminar in Communication Studies: Advanced Pedagogy**

Seminar 1 5 N G50 0

**ELIGIBLE GRADES:** GEC2: A-F, REQUISITE: COMS major

**COURSE DESC:** The professional seminar serves to orient students to graduate school and provide forums to discuss what it means to be a scholar, teacher, citizen, and/or communication practitioner.

All iterations of the course will instruct graduate students on approaches for teaching particular undergraduate courses in communication including but not limited to: Communication Theory, Small Group, Interviewing, Argumentation, Interpersonal, Health Communication, Rhetoric, or Organizational Communication. Students may repeat the course as new topics are offered.

**COM COMS COMS 7005**

**Introduction to Graduate Study in Communication**

Seminar 4 0 N G50 0

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: 

In this course, students explore the discipline of Communication and prepare for graduate work in this area as well as their future roles within it. Students learn about how the field of communication is defined, methods of structuring the field, and the roles of research, teaching, and service for academic and alternative-academic careers.

**COM COMS COMS 7010**

**Research Design in Communication**

Seminar 4 0 N G50 0

**ELIGIBLE GRADES:** GEC2: A-F, REQUISITE: 

**COURSE DESC:** Nature and selection of communicative research problems; development of strategies, techniques, and appropriate designs, critical evaluation and development of experimental and descriptive procedures.

**COM COMS COMS 7020**

**Communication Inquiry I**

Seminar 4 0 N G50 0

**ELIGIBLE GRADES:** GEC2: A-F, REQUISITE: 

**COURSE DESC:** COMS 7020 (and its companion course, 7030) provides students with a broad-based introduction to, and critical examination of, communication theory. Students read primary source materials coupled with contemporary texts that develop, apply, and/or test communication theory.
COMS 7030 Communication Inquiry II

<td>This rhetorical methods class explores narrative approaches to rhetorical criticism. &quot;Narrative&quot; is construed broadly to encompass methods that view rhetorical transactions as dramatic events or as story-telling. Examples of narrative approaches to rhetorical criticism include Kenneth Burke's dramatistic approach, Ernest Bormann's rhetorical vision/fantasy theme analysis, or Walter Fisher's narrative perspective. These approaches tend to construe rhetorical discourse as involving heroes/villains (protagonist/antagonist), conflict, and events (a plot).</td>

<td>This course focuses on performance as a paradigm for the study of communication processes, broadly defined. Performance is approached as method, experience, metaphor, and subject of analysis. The course is both conceptual and practical. It introduces students to key concepts in performance theory such as ritual, identity performance, culture, play, performativity, performing, performance texts, and performance process. Students gain experiential training in performance ethnography, ethnography of performance, autobiographical performance, autoethnographic performance, social justice organizing and performance, and performative writing. This training is accomplished through exercises in textual, aural, performative, material, poetic, and other sense-based representation of performance and everyday life.</td>

<td>This course covers measurement of quantitative data and the preliminary analyses required before conducting the substantive analysis of hypotheses and research questions. The measurement portion of the course focuses on decision making and techniques for producing and working with quantitative data, focusing in particular on conceptualizing and operationalizing quantitative variables. Students will explore statistical techniques for assessing measurement including reliability and exploratory factor analyses. The preliminary analysis portion of the course explores issues such as data cleaning, diagnosis and resolution of missing data issues, item-level analyses, forming multi-item scales, transformation, and evaluating confounds and covariates.</td>

<td>This course provides an introduction to the quantitative research method of moderation and mediation. A moderator variable is one that influences the strength of a relationship between two other variables, and a mediator variable is one that explains the relationship between the two other variables. This course is both conceptual and analytical. Students learn how to theoretically propose moderation analyses vs. mediation analyses and how to rationalize one approach over the other. Students also practice moderation and mediation through multiple regression and simple path analyses techniques (SPSS, PROCESS, and AMOS).</td>

| This course is designed to provide advanced students with an opportunity to apply communication theory in exploring questions and/or addressing problems that connect the realms of interpersonal communication studies and organizational communication studies. The course will be open to COMS graduate students who have successfully competed their first year of graduate studies and to graduate students from other programs in the university contingent on instructor permission. The precise questions explored and methods employed in that exploration will vary according to instructor interests and background. | | | | | | | | | | | | |

| This course is designed to provide an introduction to identity and communication related specifically to interpersonal, intergroup and/or organizational communication contexts. Specifically, this course covers both foundational and contemporary theory, research and practice related to identity and identification in at least one of these substantive areas. Students study multiple theoretical, conceptual and methodological approaches to understanding communication and identity. The course requires students to think critically about core research programs that have guided our field. | | | | | | | | | | | | |

| The formation, maintenance, and dissolution of relationships comprises a large portion of our communication. These relationships may include romantic partnerships, friendships, family relationships, work relationships, and caregiver relationships, to name a few. In this class, students will investigate communication processes present in these relationships as well as relevant constructs, theories, and topics in order to gain a more complete and advanced understanding of interpersonal communication at both the abstract (theories, empirical research) and concrete (conducting their own research) levels. | | | | | | | | | | | | |

| This course is an advanced seminar focusing on the role and dynamics of interpersonal communication employed across a range of personal and public relationships and contexts. Topic varies with instructor. Students may repeat course as topics rotate for a total of 12 credits. | | | | | | | | | | | | |
Courses Listed for the Department of Communication (COM) for the Graduate Program

**Topics in Advanced Organizational Communication**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8285
- **Course Title:** Topics in Advanced Organizational Communication
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Topics in Relating and Organizing**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8290
- **Course Title:** Topics in Relating and Organizing
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Rhetorical Theory**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8300
- **Course Title:** Rhetorical Theory
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Rhetoric and Popular Culture**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8310
- **Course Title:** Rhetoric and Popular Culture
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Rhetorical and Communicative Functions of Technology**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8320
- **Course Title:** Rhetorical and Communicative Functions of Technology
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Feminist Rhetorical Theory**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8330
- **Course Title:** Feminist Rhetorical Theory
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Rhetoical Criticism**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8340
- **Course Title:** Rhetoical Criticism
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Studies in American Rhetoric**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8350
- **Course Title:** Studies in American Rhetoric
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Topics in Communication and Cultural Critique**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8360
- **Course Title:** Topics in Communication and Cultural Critique
- **Component:** Seminar
- **Credit Hours:** 4
- **General Education:** N
- **Perm:** G50
- **Subsidy:** 0

**Topics in Rhetoric and Culture**
- **College:** COM
- **Department:** COMS
- **Course Code:** COMS 8390
- **Course Title:** Topics in Rhetoric and Culture
- **Component:** Seminar
- **Credit Hours:** 4

<td>COURSE DESC:</td>
<td>Students examine the history, theory, science, and technology behind virtual, mixed, and augmented reality (these are collectively understood as cross reality, or XR). The burgeoning possibilities of VR, MR, and AR are introduced in a variety of contexts. Students evaluate the importance of human and machine interaction and work to understand how human perception and ethical decision making operate in conjunction with these new technologies. Emphasis is placed on the critical and ethical analysis of virtual reality technologies, especially as they relate to the societal effects of human-centered interaction. Students engage with scientific, industrial/creative, mathematical, ethical, philosophical, and technical aspects across the spectrum of XR.</td>

**COURSE DESC:** Principles of operation and design of typical voice and data communication systems. Includes switching, routing, transmission, and broadband networks, with an emphasis on network applications.

**ELIGIBLE GRADES:** GEC1: A-F

**REQUISITE:** Non-ITS major

This course is designed for students with little or no scripting experience. The students learn the basics of scripting, focusing on the process of creating small computer programs or "scripts" in a less formal context than traditional computer programming. Scripts are typically used in various data analysis systems, the creation of simple web and mobile applications, the automation of repetitive computer tasks, and the creation of graphics and animations. This course is designed for students with little or no scripting experience. The process of breaking down a problem into steps that can be automated is introduced. Students work in a drag-and-drop scripting environment to practice this process before moving to the python scripting language. Throughout the course, students focus on creating useful solutions across a number of disciplines.

<td>The course examines the impact of surveillance enabled by communication and information technologies on the ability of individuals to maintain private spaces. Students evaluate theories of privacy and surveillance, surveillance technologies, the contours of national and global surveillance systems, and laws and policies that regulate those systems. Students apply ethical frameworks to assess surveillance technologies and their impact on privacy. Students examine surveillance-related technologies such as mobile phones, drones, the World Wide Web, social media, predictive algorithms, and the Internet of Things. Government surveillance technologies and systems such as those revealed by Edward Snowden and Wikileaks are also covered.</td>

<td>Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.</td>

<td>Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process.</td>

<td>Examines the impact of information technology on work and domestic life, specifically focusing on the issue of gender. Men and women have interacted with information technologies in strikingly different ways. For example, computing has developed as a male dominated field, while the telephone has been strongly associated with women. Analyzes the social forces underlying this gender difference, focusing on feminist theories and theories of masculinity. The development of information technologies (telegraphy, telephone, computer, and Internet) will also be discussed.</td>

<td>Covers wireless communications principles as well as a study of modern commercial wireless systems. Starts with a discussion on the challenges inherent to wireless communications and the proceeds with a study of RF propagation over noisy channels, S/N ratio, antennas and frequency assignment. Discusses satellite communications basics: components, operations, orbits, frequencies and Earth stations. A detailed discussion of wide area terrestrial wireless systems: analog and digital cellular, 3G and 4G broadband systems provides students with an overview of the advantages and limitations of diverse modern and legacy systems. Local and personal area networks discussions are also included, with an overview of their structure, security and the deployment planning process.</td>

**Course Description:**

- **Internet Engineering:** Lecture 4 hours. WARNING: No credit for this course if the following is taken (keeps credit for the following course, as defined by department): C.S 5750.

- **Topical Seminar:** Lecture 1 to 15 hours. Topics include transmission media, topology, and encoding; link-layer access methods, flow control and error detection; network addressing and routing; and end-to-end transport mechanisms. Special emphasis on traffic characterization, network performance, and network security. Suggested background includes probability and statistics; class involves extensive analysis and introduces simulation software tools.

- **Research Methods in Information and Telecommunication Systems:** Lecture 4 hours. Provides an overview of the field and introduces the students to the fundamentals of research, including the steps involved in identifying a research problem, how to formulate a problem statement, selection of appropriate research methodologies, accumulating and analyzing relevant empirical data, writing research results. Will explain and analyze various research methods and tools, both quantitative and qualitative.

- **Advanced Policy and Regulation for ICT Networks:** Lecture 4 hours. Provides an overview of advanced topics in telecommunications policy and regulation in the United States. Emphasis will be on primary sources, e.g., FCC and State Public Utility Commission Orders, appellate court decisions, and other documents. This elective will build on the foundation provided by ITS 5019. Subject matter will include state and federal activity related to local competition, access charge reform, regulation of broadband services, and spectrum management.

- **Telecommunications and Economic Development:** Lecture 4 hours. An examination of economic development issues and potential telecommunications strategies to assist in solving development problems. The problems of less developed countries will be studied, as well as the potential impact of communication networks and services on development in undeveloped pockets of the developed world. Will also examine urban ills that exist in the developed areas of developed countries and will explore the potential role of communication networks to implement solutions to those urban ills. Will also explore the potential role of communication networks on the development of global markets in the service sector and the impact of this trend on both developed and less developed nations.

- **Information Networks:** Lecture 4 hours. An introduction to the architecture of information networks and the applications built on this architecture. Students study the fundamental concepts of communication networks, switching techniques, transmission systems, protocols, and distributed applications. Voice, data, image and video communication networks are all addressed.

- **Strategic Issues in Information and Telecommunication Systems Technology and Policy:** Lecture 4 hours. Employs extensive readings and illustrative case studies in the analysis of the strategic concerns involved in the successful deployment of voice, data, image and information technologies and services within user organizations, service providers, and vendor enterprises. The successful deployment of these technologies and services requires an understanding of the interplay of an array of technical concerns, policy considerations, markets and human/social issues. Provides students with the opportunity to grasp the interplay of these concerns and issues through strategic assessment, lifecycle management, and information and telecommunication system procurement.

- **Theory of Communication Networks:** Lecture 4 hours. An intensive study of communications networks organized by the layered protocol architecture model. Topics include transmission media, topology, and encoding; link-layer access methods, flow control and error detection; network addressing and routing; and end-to-end transport mechanisms. Special emphasis on traffic characterization, network performance, and network security. Suggested background includes probability and statistics; class involves extensive analysis and introduces simulation software tools.

- **Topical Seminar:** Lecture 1 to 4 hours. A focused, in-depth analysis of a significant current communication policy issue. Students conduct a literature search of the policy or technical issues surrounding the specific topic, develop a historical context for the issue under discussion, and produce a substantial paper analyzing an important aspect of the topic. Topics will be current issues in the industry.

- **Internship in the Management of Information and Telecommunications Systems:** Internship 2 to 4 hours. This course provides academic credit during an internship with an approved company, agency, or organization. An application is necessary, and a comprehensive paper is required. Advanced permission is required. Students may use ITS 6910 to satisfy the cognate requirement of the MITS degree. Students may not apply ITS 6910 toward MITS elective requirements.

<td>COURSE DESC: Examines the effects of the &quot;information age&quot; on women's lives. Telephones, computers, and the Internet have revolutionized the way people work and live. These technologies have affected men and women differently, however. Discusses the information age and its impact on domestic and work life. It pays special attention to the relationship between women and two of the main information technologies: the telephone and the computer. The objective is to explore the ways in which these technologies have been &quot;gendered&quot;. Also examines the role of women in relation to the telegraph, the typewriter, video games, the Internet, and other communication and information technologies.</td>

Eligible Grades: GEC1: A-F
Requisite:

Course Description:
- Introduction to Electronic Media: Overview of the electronic media field, including the history from the first radio to new media today. Introduction to the business of electronic media and its career trends.
- Writing For Media: This is an introduction to basic principles of scriptwriting for electronic media distribution. The content focuses on methods and techniques of preparing and writing media copy for various electronic media applications.
- Electronic Media Workshop: Short course in specific topics in electronic media applications. Emphasizes hands-on practice on such subjects as visual composition, camcorder operations, video editing, lighting, audio editing, and media digitization. Intended for non-majors.
- Electronic Media as Business: Overview of business practices and techniques in the electronic media.
- Topics in Electronic Media Technologies: Covers a variety of technical topics in the fast changing field of electronic media. Faculty and visiting professionals address current trends in technology such as: digital transitions, knowing when to upgrade, integrating new and old equipment, forward thinking and future trends.
- Special Topics in Electronic Media - Video: Covers a variety of topics in the fast changing video production field. Faculty and visiting professionals will address current trends in video such as: new technologies, 2D/3D camera operation and editing, sports production, changes in the ever changing corporate media and marketing video for the web.
- Special Topics in Audio Production: Covers a variety of topics in the fast changing audio production field. Faculty and visiting professionals address current trends in audio production such as: live event sound reinforcement, audio mastering, sound design television and film, new media and non-terrestrial programming and more.
- Introduction to Audio Production: Introduces the terminology and procedures used in audio production. Instruction in the use of audio production equipment and the techniques used in producing various types of audio productions.
- Introduction to Multimedia Production Design: Use of software applications on both the Mac and PC to design, create and edit multimedia for desktop publishing, interactive presentations, television/video, and website content.
- Advanced Audio Production: Experience with innovative techniques for production and performance of audio materials. Investigation and analysis of audio production development and individual problems during productions.
- Introduction to Website Design: Webpage creation and Internet functioning, using HTML, integrating media into Webpages, posting pages to the Web, and server functions.
- Introduction to Video Production: Principles of basic video production and development of criteria for evaluation of video production.

<p>| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | C or better in MDIA 1010 and MDIA Major. | Emphasis is placed on research methods, writing activities and creative exercises relevant to non-fiction story development. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | C or better in MDIA 1010 | Introduction to the techniques and practices of media analysis. Designed to provide critical skills to understand media products for the messages embedded within them, the different interpretations that various audience members or users take away from them, and how those products can change or not in a global culture. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | C or better in MDIA 1020 | Provides an intensive overview of how business is conducted in the media industries. Examines the fundamental relationships between art and commerce in the media industries; structure of media companies; strategies media companies use to attract audiences/buyers; the various ways media evaluate their products, and ethical issues that impact current media practices. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | C or better in MDIA 2010 | Focus on the schools of thought that have shaped the study of media throughout the 20th century, and the theories that have lain the foundation for media studies in the 21st century as they relate to television, radio, film, music, the Internet, and video games. Talk about these theories in relation to the contexts in which they were developed and the research methodologies that adopted them. As we appreciate the interdisciplinary nature of media studies, we will also have to consider what distinguishes our field from others: what constitutes a medium? What is “theory” and what good is to theorize the media? | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | C or better in MDIA 1010 | The course comprises direct observation and analysis of diverse social media texts. Participants, forms, and consequences of social media come into full view. The course lays the groundwork for a new form of cultural literacy. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | Soph or Jr or Sr | Provides an examination of the evolution of television genres. Provide an aesthetic, historic, and critical underpinning that informs the production of new genre formations, even as the historic programmatic flow has become increasingly niche driven. As such, the course triangulates media studies with political economy of television and audience and textual analysis. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | Soph or Jr or Sr | Analyzes media comedy, including theories of humor and types, styles, techniques, and varieties of television and film comedy from the silent movie greats through comedy teams, slapstick, sentimental, screwball, and situation comedies. | |
| ELIGIBLE GRADES: GEC1: A-F | REQUISITE: | Soph or Jr or Sr | Contemporary American Documentary looks at contemporary issues in American life through the work of distinguished non-fiction filmmakers. Documentaries dealing with all aspects of American society are screened and discussed. Politics, race, poverty, religion, big business and war are among the issues dealt with. The aim of this course is to illuminate and examine the issues, and to develop critical viewing skills so that students become savvy consumers of such media. | |</p>

**COURSE DESC:** Intended to provide practical workbench experience in design and construction of electronic equipment used in electronic media, building on the foundation of technical knowledge gained in MDIA 3080. Unlike 3080, which is intended to develop a general understanding of electronics and electronic technology, this course aims to provide participants with the skills necessary to put that knowledge to use in the construction of devices employed in media applications.

**Course Descriptions:**

- **Technical Bases of Electronic Media (MDIA 3380):** Lecture 3 0 N U30 0
  - **ELIGIBLE GRADES:** GEC1: A-F
  - **REQUISITE:** MDIA 3080 and WARNING: not MDIA 308L
  - **COURSE DESC:** Intended to provide practical workbench experience in design and construction of electronic equipment used in electronic media, building on the foundation of technical knowledge gained in MDIA 3080. Unlike 3080, which is intended to develop a general understanding of electronics and electronic technology, this course aims to provide participants with the skills necessary to put that knowledge to use in the construction of devices employed in media applications.

- **Animation II (MDIA 3500):** Lecture 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** C or better in MDIA 2500
  - **COURSE DESC:** This course is an introduction to the basic principles of 3D computer modeling and animation, and a continuation of animation fundamentals introduced in Animation I. Students are introduced to the topics of rigging, texturing, and lighting.

- **Producing for Video (MDIA 3600):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2100 or MDIA 2200
  - **COURSE DESC:** Focuses on the role of the producer in the video and film industries. Particular attention is placed on developing marketable ideas, research, production planning, budgeting, and pitching.

- **Production in Los Angeles (MDIA 3602):** Lecture 3 0 D U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** Permission of Program Director
  - **COURSE DESC:** This course introduces students to professional production techniques in the Los Angeles-based creative industries. Students attend film/video shoots and visit studios, production companies, vendors (camera suppliers), and post-production facilities (e.g., sound mixing, video post). The course also includes guest speakers (e.g., production executives, line producers, assistant directors) and workshops (e.g., camera/lighting, on-set professional etiquette). Students acquire skills in budgeting, location scouting, production permits, equipment rental, and negotiation with talent/suppliers in the Los Angeles area. The course culminates with a short project produced by students in the OHIO-in-LA Program.

- **Intermediate Video Production (MDIA 3700):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2700
  - **COURSE DESC:** Prepares students for work in the video production profession and further their knowledge of single-camera video, field production techniques. Students will develop their creative voice and storytelling abilities.

- **Directing the Narrative Scene: Director Preparation and Pre-Visualization (MDIA 3701):** Laboratory 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2200
  - **COURSE DESC:** Combines elements of lighting, camera work, and editing with concepts of blocking and directing actors to inform choices when directing a narrative scene for single camera or multicamera narrative television production.

- **Directing the Narrative Scene: Director Preparation and Pre-Visualization (MDIA 3702):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2200
  - **COURSE DESC:** Combines elements of lighting, camera work, and editing with concepts of blocking and directing actors to inform choices when directing a narrative scene for single camera or multicamera narrative television production.

- **Multicamera Producing and Directing (MDIA 3705):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 1400 and (MDIA 1200 or 1300 or 2900) or (EM 2110 and EM 2111)
  - **COURSE DESC:** An intensive, practical introduction to studio directing. All students direct a variety of program formats, including interviews, demonstrations, scripted shows and live current affairs productions. Develop producing and directing skills, to communicate effectively over talkback, to acquire good time management skills, and to write studio camera scripts.

- **Writing and Producing the Non-Fiction Podcast Series (MDIA 3707):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** Jr or Sr
  - **COURSE DESC:** Students explore the process of writing, pre-producing, creating, and distributing a multi-episodic podcast series for client-based non-fiction projects.

- **The Craft of Editing (MDIA 3800):** Seminar 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2800
  - **COURSE DESC:** Includes dialogue, action, chases and fights, comedy, documentary, and music video.

- **The Art of Editing (MDIA 3807):** Lecture 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** MDIA 2010 or FILM 2010 or 2020
  - **COURSE DESC:** Move beyond the technical, button-pushing side of film and video editing to explore the aesthetic and storytelling choices faced by the editor. Through analyses of existing films, theoretical exercises and research on current editing practitioners, students will gain an understanding of what the editor contributes to the storytelling process.

- **Women and the Media (MDIA 3810):** Lecture 3 0 N U30 0
  - **ELIGIBLE GRADES:** A-F
  - **REQUISITE:** Soph or Jr or Sr
  - **COURSE DESC:** Explores the relationship between women and the media in the context of both their representation and their access to positions within the industry.

**Course Descriptions:**

1. **Digital Media Capstone**: This course involves students in a deep exploration of the design and creation of complex digital images through layering effects involving photographic images, motion graphics, and animated elements.

2. **Animation III**: This course continues the development of 3D computer modeling and animation skills introduced in Animation I and II. Students will build on the topics of rigging, texturing, lighting, and animation.

3. **The Business of Hollywood**: This course is a practical analysis of the entertainment industry in Los Angeles. Focuses on how Hollywood works from a business perspective: how/why decisions are made about content produced; who makes those decisions; where the money flows; who the important 'players' are; and what it takes to succeed in Hollywood. Insights and experiences from a variety of sources, including media industry trade publications and successful professionals. Guest speakers include studio executives, agents/ managers, producers, writers, casting directors, entertainment attorneys, union representatives, audience analysts, and professionals from various parts of Hollywood's entertainment industries.

4. **Writing and Recording Episodic Content for the Podcasting Marketplace**: This course allows students to develop an original podcast series for production and distribution. The course material draws heavily on ideation strategies for concept development, scriptwriting, and editorial resources, as well as access to digital resources for applied technical skills and distribution strategies. Marketing and business considerations are incorporated into the latter portion of the course with students considering tangential assets for the series including title, logo development, audience research, marketing to their consumers, as well as best practices for episode access and distribution.

5. **Advanced Narrative Production**: Students work in production teams to make large scale narrative films.

<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>格尔:C1: A-F REQUISITE: Examinations relationships between media and socioeconomic development. These relationships are explored in the context of issues that include globalization, media ownership, participatory media, the digital divide, gender, and representations of poverty in mainstream media. Connections between media and development are assessed through considering media in a variety of forms, including television, radio, the Internet, motion pictures, and participatory media. Relationships are also examined at different scales, such as the global, national, and local scales, as well as in various parts of the world, including Latin America, Asia, Africa, and parts of the U.S., including Appalachia. Along with course readings, media content viewed in class serves as a basis for discussions.</td>

<td>Digital transformation is an example of the need for businesses to innovate and change as the market and consumer desires evolve. As opportunities and risks are identified, organizations need the ability to transform business models or processes to account for digital media technology and economic shifts; and develop creative, innovative digital media products or services to adapt to evolving audience or user demands. This course is devoted to the theories and best practices that enable developing and sustaining an organizational culture of continuous digital media transformation and innovation. Particular attention is given to communicating effectively within and across groups, teams, organizational units, and external communities; building trust both within a creative media organization and with external constituencies; and the fundamentals of assessing readiness for digital media transformation.</td>

**Course Description:**
- **Quantitative Comm Research:** Emphasizes the principles, logic, underlying assumptions, and techniques of quantitative methodologies commonly employed in communication research. Deals both with research design and strategies of analysis.
- **Quality Research Methods in Media Studies:** Provides an introduction to qualitative research methods, particularly as applied to mass communication and media culture research. Through readings, class discussions, and individual work, students will gain an appreciation of the complexity of qualitative research, and will begin to use these methods to conduct their own research.
- **Seminar Communication and Development:** Provides an overview of the communication and development field and serves as a foundation for the subsequent in-depth study and analysis of specific aspects of the role of communication in development and social change. Explores the complex relationships between communication and human and social development, and the role that communication plays in promoting (or impeding) social change and development. Throughout the seminar participation, collective research and teamwork are emphasized, and participants are expected to undertake both individual and group projects.
- **Introduction to Theory in Communication and Development:** Serves as one of the three core courses offered to students in the Communication and Development Studies graduate program during their first semester in the program. Introduces students to key communication theories that have been associated with communication for development practice since World War II. The course examines micro, mid-range, and macro-level theories, connecting those formulations to the various paradigms that have guided development practice by influential international agencies and organizations. The course also isolates for discussion the theory-based competencies required of professionals currently working in the field of communication for development. Thus, the seminar focuses upon theoretical formulations in areas that include behavior change theories, social learning theory, social cognitive theory, and interpersonal communication. It also covers mass communication theories that have particular relevance to communication for development, including theories of media dependency, cultivation, and media effects. Furthermore, students are introduced to other key issues and theories related to the field, including diffusion of innovations and entertainment-education. In short, the course focuses on the theoretical competencies required of Comm Dev students to be successful in their eventual academic and/or professional careers.
- **Introduction to Research in Communication and Development:** This course serves as one of the three core courses required for students in the Communication and Development Studies graduate program during their first semester. It introduces "Comm Dev" students to basic principles associated with conducting graduate level research, with some focus on key research considerations related to the field of Communication for Development. With that in mind, the course covers critical elements necessary for conducting graduate-level, scholarly research more generally, including identifying a research topic; accessing scholarly research; writing a literature review; and research ethics. The students are also introduced to research design, and to qualitative and quantitative methodological approaches to collecting and analyzing data. At the same time, methodological elements that help define Communication for Development as an academic and professional field serve to further inform readings, lectures, and discussions. Course topics with this relatively more specific programmatic focus include monitoring and evaluation; rapid appraisal methods (e.g. mini-surveys, transect walks, and community mapping); and participatory methods (e.g. focus groups and community discussions).
- **Applied Research Methods in Communication and Development:** Introduces key research methods used in applied communication and development projects. Content includes a range of dominant and emerging research methods used across formative, process and summative evaluation phases, with greater emphasis of qualitative and participatory research techniques. Guides students through the process of designing a formative research plan, a monitoring system, and an evaluation framework, with a focus on specific areas of development (health, education, environment, human rights, conflict).
- **Introduction to Audio and Video Production:** An introductory course for graduate students lacking production experience. Covers audio and video theory and terminology and production planning. Provides experience in audio and video production.
- **Research in Social Data Analytics:** This course examines interdisciplinary research in data analytics. A mix of quantitative, qualitative, and analytic techniques is employed to study human interactions online. Students collect, analyze, and visualize social media data.

COURSE DESC:

- **Children, Youth, and Media**: Explores the many issues and concerns defining the relationship between children and youth and their media from both a social science and cultural studies approach. Begins with children's earliest experiences and concludes with the role of social networking and teen television. Websites, motion pictures, and television will be among the media considered in a local, national, and global setting.

- **Professionals Screenwriting for TV and Film**: Deep exploration into the creative and business decisions needed to write successful feature length screenplays and/or spec television scripts.

- **Special Topics in Media Arts and Studies**: Specific course content will vary with offering.

- **Special Topics in Media Arts & Studies**: Special offerings based on faculty expertise, availability of visiting professionals, student interest, and current trends.

- **Immersive Media Practicum**: This course integrates graduate students into a hands-on work environment in Virtual and Augmented Reality production, focusing their efforts on faculty-led immersive media projects. Students work with faculty and staff as part of a multi-person team to accomplish project-specific goals during the assigned semester.

- **Independent Study**: Individual research on special problems. Projects must be approved prior to registration.

- **MFA Production Thesis in Scripps College of Communication**: The course fulfills the project-based thesis requirement for the MFA in Communication Media Arts. Students demonstrate mastery of two media production areas within a contextual field.

- **Professional Seminar in Media Arts & Studies**: This professional seminar provides doctoral students with a forum to explore the roles of scholar, teacher, practitioner, and colleague. Structured approach to developing philosophies of teaching and service as well as guidance in the preparation of scholarly manuscripts, effective teaching, and conference presentation skills.

- **Media Content Management**: Consideration and examination of theory and practice in the processes of evaluating, selecting, scheduling, promoting, distributing, and marketing media content.

- **Audience Research**: Develops an understanding of the methods and relevant theories for the study of media audiences/users through readings and classroom discussion of audience theory and both scholarly and media industry research practice. Students will be able to design and execute an effective study to address audience, industry, policy, and/or theoretical goals.

- **Sociopolitical control of communications media; effects of laws, regulations, and public pressures upon policy.**

**Course Description:**
Offers an introduction to visual communication principles, aesthetics, research, and applications in the field. It prepares students for further study in the communication industry of photojournalism, commercial photography, interactive multimedia design, and publication design.

**Eligible Grades:** GEC1: A-F
**Requisite:**
CEC1: A-F

**Course Descriptions:**

- **Advanced Photographic Illustration:** Lecture component. Requires GEC1: A-F with permission and guidance of a faculty member. Written proposal required.
- **Documentary Photography:** Lecture component. Requires GEC1: A-F with permission and guidance of a faculty member. Written proposal required.
- **Photographic Journalism Capstone:** Lecture component. Requires GEC1: A-F with permission and guidance of a faculty member. Written proposal required.
- **Advanced Photographic Reportage:** Lecture component. Requires GEC1: A-F with permission and guidance of a faculty member. Written proposal required.
- **Graphics Systems Management:** Lecture component. Requires GEC1: A-F with permission and guidance of a faculty member. Written proposal required.
- **Visual Communication Honors Project:** Tutorial component. Requires GEC1: A-F and permission of the instructor. Written proposal required.
- **Special Topics in Visual Communication:** Lecture component. Requires permission and approval of the instructor. Written proposal required.
- **Semester in DC: Seminar I, II, III:** Seminar component. Requires permission and approval of the instructor. Written proposal required.
- **Individual Study:** Ind Study component. Requires written proposal.

**Course Descriptions:**

- **Introduction to Visual Communication:** Lecture 4, 0. GEC: A-F. This course introduces students to the field of visual communication and provides foundational knowledge of the influence of the physics of light, the physiology of the visual system, and the psychology of perception on visual communication. It also examines the building blocks of design, photography, and motion images along with a historical perspective on each. Future trends and the ethics of visual communication are also examined.

- **Communicating with Data Visualization:** Lecture 4, 0. GEC: A-F. This course examines the application of communication design principles to the visual display of quantitative and qualitative data. Lectures, in-class workshops, readings and in-class discussions convey the knowledge necessary to analyze data presentations and articulate appropriate data visualization principles. In essence, students learn how to evaluate and create visual storytelling presentations from raw data.

- **Information Design Basics:** Lecture 4, 0. GEC: A-F. Introduction to publication design. Introduction to content planning, the application of design principles and production techniques in print media using current technology.

- **Graduate Seminar:** Lecture 1, 4. N, G40. Deals with such topics as ethics, current trends, internships, and the structure of the MA program. Professionals visiting campus are also asked to speak on topics concerning the visual communication profession.

- **Visual Communication Design II: Informational Graphics:** Lecture 4, 0. GEC: A-F. The visual presentation of quantitative and spatial information. Examines the planning, design, and computer preparation of charts, graphs, diagrams, and maps for both print and electronic publication. Cooperative buying fee.

- **Advanced Informational Graphics:** Lecture 4, 0. GEC: A-F. Capstone application of informational graphics techniques with emphasis on design and production techniques as they pertain to print and electronic formats. Cooperative buying fee.

- **Design III: Advanced Publication Layout and Design:** Lecture 4, 0. GEC: A-F. Intermediate study in information architecture through publication design. Cooperative buying fee.

- **Illustration II: Editorial Illustration:** Lecture 4, 0. GEC: A-F. Application of industry-specific tools and techniques for illustrative visual communication of story concepts in both magazine and printing environments. Students will understand the process and application of both traditional and digital techniques of illustration.

- **Interactive I: Web Design:** Lecture 4, 0. GEC: A-F. Introduction to Web design will provide an overview of Internet design and user-interface, and will provide students with the analytical and technical skills, aesthetic and creativity needed to design for the World Wide Web.

- **Interactive II: Advanced Web Design:** Lecture 4, 0. GEC: A-F. This class will provide students with advanced skills which include the utilization of the human interface, design, Web delivery, information architecture, creation/production of multimedia-based visuals for Internet delivery.

- **Interactive III: Interactive Media:** Lecture 4, 0. GEC: A-F. Introduction to planning, media integration, and production techniques and tools of interactive multimedia. Through practical exercises this course will expose students to major component media, including computer text, graphics, photography, animation, speech, sound, and video. Technical and human interface issues are also covered. Cooperative buying fee.

### EDCE 4001 | Human Service Professions

**ELIGIBLE GRADES:**
- GEC1: A-F
- CR, PR

**COURSE DESC:** Designed to provide knowledge and skill in career and life planning for fr and soph, especially for those who are undecided about college major and career. Emphasis on identifying strengths, clarifying values, exploring career options, and developing decision-making skills. Special section for Adult Learning Services students only: designed to provide knowledge and skill in career and life planning especially for adult considering job or career change. Emphasis on identifying skills, interests, experience, and values in relationship to new career choices and options.

**EDCE 4003 | Stress Management**

**ELIGIBLE GRADES:**
- GEC3: A-F

**COURSE DESC:** This course provides a comprehensive overview of the knowledge and skills required for successful human services work. Students learn about the basics of client care in social service agencies. Students explore historical aspects, technology skill attainment, job requirements, models of service delivery, and beginning skills in the helping process.

## EHS C&HE EDCE 6860: Multicultural Counseling
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** This course addresses social and cultural diversity in the counseling profession, including history and development of multicultural and social justice counseling. The purpose of the course is to increase counselor cultural awareness of self and others, gain understanding of privilege and oppression, learn help-seeking behaviors of diverse client populations, and develop counselor helping skills and application of practical knowledge. The course examines and applies multicultural and social justice counseling competencies and advocacy counseling competencies endorsed by the American Counseling Association.

## EHS C&HE EDCE 6900: Special Topics in Education - Counselor Education
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** Specific course content will vary with offering.

## EHS C&HE EDCE 6910: Field Experience in Counseling
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** Supervised field work in educational or community setting selected with regard to professional needs and interests of individual student. Student should have a clear idea of type of field experience desired and required setting for the experience before enrollment. Requirements will include on-site supervision by staff, regularly scheduled on-campus conferences, and progress and terminal reports.

## EHS C&HE EDCE 6914: Counseling Internship
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** A culminating experience providing counseling and related services to clients in educational, community, and business settings. Services might include functions related to special problems and populations. On-site supervision by staff is required, along with regular on-campus conferences.

## EHS C&HE EDCE 6915: Counseling Internship
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** A culminating experience providing counseling and related services to clients in educational, community, and business settings. Services might include functions related to special problems and populations. On-site supervision by staff is required, along with regular on-campus conferences.

## EHS C&HE EDCE 6920: Counseling Practicum
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** The counseling practicum provides a closely supervised field experience in counseling and related activities. Students spend approximately 10 hours per week at their practicum sites and attend class weekly. Students assist clients through counseling and related services in educational or clinical settings. The practicum focuses on counseling and consultation processes to further develop interpersonal relationships, communication skills, methods planning, service provision, and techniques to facilitate change of behaviors and attitudes.

## EHS C&HE EDCE 6921: Advanced Counseling Practicum: School
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** Students conduct supervised counseling sessions. Preparing case notes, consulting with other professionals, critiquing audio and videotapes of their counseling sessions, participating in practical seminars, etc.; are part of the experience. Students must submit an application for admission to the practicum the quarter before expected enrollment.

## EHS C&HE EDCE 6922: Advanced Practicum: Clinical Mental Health
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** Students conduct supervised counseling sessions. Preparing case notes, consulting with other professionals, critiquing audio and videotapes of their counseling sessions, participating in practical seminars, etc.; are part of the experience. Students must submit an application for admission to the practicum the quarter before expected enrollment.

## EHS C&HE EDCE 6924: Advanced Practicum: Rehabilitation
- ** Eligible Grades:** GE4: A-F, CR, PR
- **Course Description:** Students conduct supervised counseling sessions. Preparing case notes, consulting with other professionals, critiquing audio and videotapes of their counseling sessions, participating in practical seminars, etc.; are part of the experience. Students must submit an application for admission to the practicum the quarter before expected enrollment.

**EDCE 7400 Youth Violence**

Study and interpretation of scientific research on community mental health or selected government agencies. Independent and directed projects.

**EDCE 6200 and 6310**

Advanced appraisal techniques reviewed, with particular attention to personality measures. Both objective and projective techniques considered, and each student is expected to develop applied expertise with a method of each type. For students enrolled in the doctoral program or advanced master's level. The content is designed to prepare the student to become familiar with clinical instruments related to personality assessment. Students will interpret and understand psychological testing and clinical evaluations and acquire a greater depth of knowledge regarding the use of test data in the diagnostic process. Consideration will be given to ethical issues in the handling and administration of psychological assessment instruments, including potential forms of bias in interpretation.

**EDCE 6200 and 6310**

The purpose is to acquaint the student with assessment and diagnosis with children, clinical decision making, developmental psychopathology, measurement and psychometrics, social values, ethics, and cultural and linguistic issues. Students will learn the components of the process of multidimensional behavioral assessment and will be exposed to a variety of assessment instruments commonly used in the clinical assessment of children.

**EDCE 6200 and 6310**

Attitude awareness regarding older persons, knowledge of developmental periods of aging, basic gerontological counseling concepts, and skills in applying knowledge of aging and counseling to work with older persons are emphasized.

**EDCE 6200**

The purpose is to provide an introduction to family counseling, with an emphasis on theoretical foundations and family counseling techniques.

**EDCE 6200 and 6310**

Explores some of the causes and consequences of such forms of juvenile delinquency as violence, school shootings, gang membership, drug use, and running away. More than examining different categories of juvenile offenses, however, will introduce students to the study of juvenile delinquency including how youth norm breaking has been measured, defined, and theoretically explained from the 19th- to the 21st-century. In addition, will examine some of the formal and informal institutions designed to manage and control young offenders.

**COURSE DESC:**
- Designed to expose students to a holistic approach to preventing and managing stress. Students learn both healthy cognitive (coping) skills and relaxation techniques with the intention of preventing and alleviating the symptoms of stress. Content includes the science of stress, the mind/body connection, stress prevention strategies such as perception, mindfulness, time management and financial management, and a variety of stress management techniques including guided imagery, progressive muscle relaxation, yoga, meditation, and autogenics. Has both personal application and professional application for students working in any area of healthcare.

- Focuses on theory and strategies of assertiveness training. Attention to goal setting, role playing, alternative behavior, evaluating consequences, and implementation of assertive behavior. Emphasis on differentiating nonassertive, assertive, and aggressive behavior.

- Study of human sexuality and stereotypical attitudes, attainment of basic knowledge, awareness of sexual abuse and violence, and understanding sexual dysfunction and sexual adequacy.

- Theory, research, and applications of individual psychology in educational, community, business, and private practice settings. Counseling, consultation, and psychotherapy methods and techniques will be demonstrated.

- Provides for understanding of human relations skills for effective interpersonal communication. Focus on skill development, cultural, and value differences among ethnic, racial, religious, and other groups. These skills have generic application for helping professionals in educational, community, family, work, and leisure settings.

- The course aims at guiding students to personalize the process of counseling and become knowledgeable about counseling theories and practice. It emphasizes the practical application of various therapeutic approaches and stresses the critical evaluation of each theory through exercises, activities and case studies. The course incorporates outcome research associated with various theoretical perspectives with specific attention given to the personal characteristics of the client and counselor, and the factors that influence the therapeutic process. In addition, there is a focus on the diverse factors that influence the therapeutic process and ethical practices of the counselor.

- Focuses on the addictive process, stages and symptoms of chemical abuse, and intervention and treatment strategies for addiction.

- Law and ethics considered for educational and mental health contexts. Federal, state, and local statutes relevant to professional functioning and rights of persons receiving counseling, and psychological services considered. Court decisions, critical cases, and legislation analyzed and interpreted. Code of ethics for counselor, psychologists, and human service workers reviewed. Guidelines for ethical behavior in delivery of services.

Complies with the following CORE standards:
- 3e, 4i, 5g, 6g, 7, 8f; C.1.1, C.1.4, C.6.6, C.8.7; C.2, C.7

Complies with the following CACREP standards:
- K1h (F1j), 5g, CMHC A.2, B.; SC A.2, B.1; DS C.7; K1a (F1a), 1f (F1h); K2f

<td>COURSE DESC:</td>
<td>Designed to prepare the student to become familiar with the psychological aspects of death and dying in our society. There will be a specific emphasis on the terminally ill as well as the effects on significant others. Topics include attitudes toward and preparation for death; sociocultural factors that influence attitude to death and care afforded to the dying; and hospice and palliative care and various types of terminal illness (emphasis on HIV/AIDS). Readings and classroom activities will be supplemented by students' self-exploration and writing on feelings, attitudes and beliefs about death and its significance for working with the terminally ill. Videos, guest speakers, readings, class discussions, journals, and individual reflection papers will be used to explore these topics. In addition there will be an exploration of support systems including counseling strategies when working with the terminally ill and their families.</td>

**ELIGIBLE GRADES:**
- GEC4: A-F, CR, PR

**COURSE DESC:**
- Capstone Project in Higher Education and Student Affairs: The purpose is to provide contextual knowledge of the evolution of the professoriate in American higher education, as well as the roles, responsibilities, institutional concerns, and career issues of individual members of the faculty. Issues associated with academic administration (e.g., workload) are also covered.
- Diversity in American Higher Education: Students choose area of study; engage in library research, interviews, questionnaires, etc.; and write a substantial scholarly paper. Students must submit a proposal to the instructor by the ninth week of the quarter prior to the quarter enrollment.
- The American Community College: An overview of the philosophy, history, and development of the community college in America. Reviews the social, economic, and political forces affecting these institutions. It also explores the rationale and techniques for keeping instructional and organizational functions responsive to the changing educational and workforce needs of the community. Will explore the development of the most exciting and uniquely American innovation in higher education since World War II, the community college. How and why did they come into being, how do they really work, and how can we make them more effective?
- The American Community College: An overview of the philosophy, history, and development of the community college in America. Reviews the social, economic, and political forces affecting these institutions. It also explores the rationale and techniques for keeping instructional and organizational functions responsive to the changing educational and workforce needs of the community. Will explore the development of the most exciting and uniquely American innovation in higher education since World War II, the community college. How and why did they come into being, how do they really work, and how can we make them more effective?
- Scholarly Writing: The purpose of this course is to assist students in developing the skills necessary to complete the many scholarly writing projects required in graduate studies.
- Assessment and Evaluation in Higher Education: Provides students with an understanding of the principles and practices that are associated with assessment in higher education. Focuses on the reasons for the development of the current assessment movement and on approaches for improving academic programs and support services.
- Finance and Budgeting in Higher Education: This course provides an overview of the finance and budgeting issues of higher education mainly in the U.S. The course has two major components: Finance and Budgeting. The Finance part introduces economics concepts and theories and applies them to higher education finance, and then examine the roles of federal and state governments and individuals in financing higher education. The Budgeting part compares various budgeting models and develops student practical skills relevant to institutional budgeting, especially the responsibility centered budgeting model. Additionally, the course covers the trends of world higher education finance. This course is intended primarily for graduate students in higher education and student affairs, educational studies, public policy and administration, and other related fields.
- The Professoriate and Academic Administration in Higher Education: The purpose is to provide contextual knowledge of the evolution of the professoriate in American higher education, as well as the roles, responsibilities, institutional concerns, and career issues of individual members of the faculty. Issues associated with academic administration (e.g., workload) are also covered.
- The Professoriate and Academic Administration in Higher Education: The purpose is to provide contextual knowledge of the evolution of the professoriate in American higher education, as well as the roles, responsibilities, institutional concerns, and career issues of individual members of the faculty. Issues associated with academic administration (e.g., workload) are also covered.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Short-term, international, service-learning based, designed to give students advanced understanding of service-learning pedagogy and practice in a developing world context.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: A supervised experience in the administration and leadership of higher education that students utilize for one or more purposes: to broaden their career experience and skills; to improve a program or a practice within their current positions, other areas, and/or other institutions; or to design and conduct assessment projects for the improvement of administrative decision-making or the establishment of future theory-based studies.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Allows students to explore Critical Race Theory as an analytical framework that provides race-based epistemological, methodological, and pedagogical approaches to the study of everyday inequalities in higher education. Key focuses are to help students understand CRT as a theoretical framework, examine its utility and limitations, and consider its application to students' own research and practice.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Seminar treatment of areas of current or topical interest in field of higher education.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Independent study and specialized research projects for advanced students in field of higher education.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Individualized instruction designed to facilitate students' development of proposal and dissertation.

Course Description:
- Seminar in Collective Bargaining in Education: Enhances understanding of collective bargaining movement in education through simulation, readings, guest lectures, media presentations, and discussions. Each student assigned a bargaining team which has responsibility for negotiating a contract. Attention given to analyzing contracts between selected employee groups and boards of education, impasse resolution, and contract administration.
- Education and the Democratic Community: Examines the varied dimensions of democracy and the democratic community and how education, both formal and informal, can prepare empowered participatory citizens. Social values that underlie conceptions of democracy explored.
- Introduction to Diversity Studies Field: Field experience or internship in a school, community or organizational setting related to diversity issues and education.
- Democracy, Education & Society: Public schools are institutions of a democracy. One measure of their success is how well they educate all children, regardless of race, class, ethnicity, gender, disability, sexual orientation, family configuration, language, and religion. Students observe, analyze, and reflect upon the advantages and tensions associated with teaching in a culturally diverse environment and society. They explore the cultural, social, and historical dimensions of education as they relate to cultural diversity. Students examine the cultural and historical context of domination and exploitation in the U.S.; the self as an anti-bias educator; and the curriculum and pedagogy in an anti-bias classroom.
- Special Topics in Critical Studies in Educational Foundations: Allows for an exploration of special topics in the field of critical studies in educational foundations. Examples of topics might include conflict resolution in schools, peace education, diversity education training for educators, art and education, educational equity, African and Native American-centered schooling. May be delivered in multiple formats, including but limited to, regular classroom instruction, community-based education or workshops.
- Independent Study in Critical Studies in Educational Foundations: Individualized studies and/or readings in critical studies in educational foundations supervised by a faculty member.
- Advanced Studies in the Histories of Education: Advanced study of various historical movements and time periods related to education. Advanced and focused study about specific historians and/or historians of education. Pays special attention to historically marginalized peoples within specific historical educational movements and trends. Allows the opportunity to engage in advanced study of historical topics in education that are often overlooked in survey courses.

<td>COURSE DESC:</td>
<td>Examines educational history and philosophy by approaching the two fields as interconnected social moments in a long conversation about the role and purposes of education in the United States. The social practice of education grows out of the explanatory constructs we hold about our history and several philosophical themes relevant to education. Themes include: (a) the various conceptions of human nature, (b) the relationship between the individual and the group or the state, (c) the nature of the “good” life, and the nature of knowledge and the processes of knowing. Given that philosophies do not exist and are not created within a vacuum, explores how our history contextualizes the development of our philosophies, that in turn impact the way we develop and carry-out schooling. Also examines select non-western historical and philosophical legacies that impact how education was or was not accessible to historically marginalized peoples.</td>

<td>Examines educational thought, theory and assumptions regarding the role that education may play in bringing about transformative social change that addresses issues of social justice. Examples drawn from contemporary innovative alternative community or school-based programs, guerilla radio or internet programming, conflict reduction programs bringing children of warring parties together, to the historical contributions of Freedom Schools from the Civil Rights Movement, the Highlander Folk Center in Tennessee, and the liberatory pedagogy of Freirean Culture Circles, among other educational initiatives. Change may occur within a school setting, or through community-based educational programs, or via larger national/international educational movements and programs. Grassroots organizing will be noted.</td>

<td>COURSE DESC:</td>
<td>Identifies particular philosophical schools of thought related to education or specific philosophers who address education. Examples of philosophers range from John Dewey to Alaine Locke to Maxine Greene and bell hooks who address the educational realm directly. Other philosophers who include educational philosophy in their general bodies of work include those such as Plato, Rousseau, Wolfe, Rorty and Foucault, among others. Potentially every philosophical school of thought from Ancient Greek philosophy to Existential philosophy to Postmodern and Post-Colonial philosophy can be studied for its educational implications. Each semester offering will select from among possible schools of philosophical thought and/or movements, as well as choosing from among specific philosophical thinkers.</td>

<td></td>
<td>COURSE DESC:</td>
<td>Education is not a neutral endeavor. It is both a societal enterprise and a localized social activity; as such, it is embedded in an ever changing socio-cultural context. Taken seriously, these two ideas point our attention to several sociological and political questions about education such as, What is the purpose of education? Who benefits from education as it is constituted? Who decides curriculum, structure, funding, etc.? What are the implications for any given educational setting? Who is marginalized by the way we “do” education in the U.S. context? What does educational change look like? Is change possible in U.S. schools, and if so, in what manner? Critically examines the complex interactions of societal structures and political ideologies as they intersect, influence and impact educational realities in U.S. public schools.</td>

<td>COURSE DESC:</td>
<td>Explores the relationship between democracy and education from multiple perspectives, including liberal democracy, pragmatist democracy and radical democracy. Critically examines concepts important to a democracy that relate to the distinction between public and private spheres, pluralism, community, individuality and responsibility, for example. Begins with assumption that schools in the U.S. have a significant role in educating for participatory democratic citizens. Examines whether and how our public schools accomplish this aim, or whether they in fact, work contrary to it. Examines pedagogical practices and school as an institution and inquire about their effectiveness in educating for an inclusive and participatory democracy. Examines contemporary and enduring issues in our democracy that are connected to or impact our students, schools and communities.</td>

<td></td>
<td>COURSE DESC:</td>
<td>Examines how educational systems are situated within the context of culture, knowledge, the economy, media and power. Utilizing interdisciplinary sources, explores the relationship between school and society with interpretive, normative, and critical theories and methods. Applies critical and cultural theories to deconstruct the socio-cultural influences and hegemonies acting upon and utilizing education; the impact of power, gender, gender, class, race, and other social factors. The ways we educate, foster student engagement and create successful learning communities in school and beyond will be examined. Attention given to contemporary dimensions and dynamics that intersect and impact education today, i.e., youth culture, marginalized voices, and popular media and culture. Examines several alternative theoretical and pedagogical approaches that have the potential to more closely fulfill the democratic promise that education can indeed, make a difference in individual lives and create more socially just people, schools, communities and world.</td>

<td>Examines the historical and contemporary issues of diversity in education. Schools and classrooms do not exist in a socio-political vacuum. Premised on how education has been and continues to be a site, if not a tool, for power and privilege as well as resistance and social justice. In addition to leading students through a self-examination of their own assumptions and beliefs surrounding diversity, explores historical events and legal cases related to diverse students in schools; theories of identity and culture and how these theories impact constructions of diversity and multicultural education; and strategies for effectively engaging issues of diversity in educational contexts. Offers an opportunity to engage in diversity education in the larger community through a service learning experience.</td>

<td>Provides opportunity for in-depth study of various culturally-based pedagogies that have been developed for the education of historically marginalized peoples. May be couched in historical movements such as the Black Power Movement or the American Indian Movement of the 1960 and 70s, or may be more contemporary pedagogical approaches such as: (a) dual language immersion schools for Spanish and English speaking students, (b) centered education approaches for Native American and African American students in particular, (c) Freirean literacy approaches for adult learners from working class or working poor backgrounds, (d) gender segregated approaches or separate learning environments. In addition, explores other potential pedagogical strategies based upon understanding cultural contexts and the contemporary educational climate.</td>

<td>Examines alternative approaches to educational theory and pedagogy. As a theory-based course, interrogates the social, cultural, and philosophical contexts of education. Focuses on relational/caring theory and other alternative educational theories that promote holistic education, home or open schooling models, arts, environmental, nature, and spirituality based education. Ultimately examines the connection between interpretations of the human condition and education.</td>

**Course Descriptions:**

**EDCS 7010: The Social and Cultural Contexts of Leadership**
- **Component:** Seminar
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Examine the concept of leadership as perceived and constructed in the United States based on the traditionalist conception of what leadership is and should be universally, that is, the Western canonical paradigm. The existence of leadership outside the Western cultural canon and the discourse that elicits the critical-cultural and social construction of leadership is scarce and, in many instances, noticeably absent. Examine leadership studies first, by investigating the cultural foundations of leadership; second, by investigating the cultural production of leadership and its significance from a social critical theoretical context; and third, vet leadership from a non-traditionalist (non-Western) historical perspective. Leadership and its development is both a social construction grounded in the cultural historical context that produces it; hence, all leadership is inherently critically cultural. Contextually all leadership is a social, cultural, historical construction (thus political) by the nature of who the leader is and what leadership paradigm they employ. Investigates this dynamic and the critical discourse in leadership studies referred to as transformational leadership.

**EDCS 7020: The Moral and Ethical Dimensions of Leadership**
- **Component:** Seminar
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Provides opportunity to engage in a broad exploration of the moral and ethical dimensions of leadership as it applies to various educational and community settings. Assumes that leadership extends beyond traditional roles and models of leadership. Examines how people who consider themselves leaders and or change/agents recognize and make moral and ethical decisions in their practice. The discipline of Western philosophy has developed multiple moral frameworks in an effort to explain how and why we make moral and ethical decisions and/or what guidelines we might rely upon in doing so. In addition, developmental psychology has also paid attention to the stages of moral development and reasoning for the same purpose. It is worthwhile to be familiar with these philosophical models, and at the same time be aware that most people make moral and ethical decisions drawing upon multiple rationales, cultural value sets, and contexts. Examines the serious import of understanding oneself and one’s moral and ethical living and decision-making, given the depth of impact of moral and ethical decisions in people's lives.

**EDCS 8010: Critical Cultural Theories & Pedagogies for Empowering Education**
- **Component:** Seminar
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Provides an advanced examination of the relationships between schools and society, focusing predominantly upon critical theory and its derivatives, in order to understand the role of education and schools’ unique position within society. Any institution with power has the ability to do good, as well as the power to do harm. Explores empowering pedagogies that emanate from critical theories in order to address the role of power and related concepts in educational institutions and provide pedagogical tools for educators and students to critically examine the implications and consequences of how we educate. Examines the societal, cultural, institutional and personal domains as we inquire into how we might educate all our young people well in the midst of changing social and institutional contexts, power, and resistance.

**EDCS 8900: Special Topics in Critical Studies in Educational Foundations**
- **Component:** Seminar
- **Cred Hours:** 1 to 4
- **Repeat Hours:** 24
- **General Education:** N
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Allows for an exploration of special topics in the field of critical studies in educational foundations. Examples of topics might include conflict resolution in schools, peace education, diversity training for educators, art and education, environmental education, African and Native American-centered schooling. May also address particular theorists and theories related to the field of critical studies in educational foundations in depth and focused beyond what may be covered within the current curriculum. May be delivered in differing formats, including but not limited to, regular classroom instruction, community-based education or workshops.

**EDCS 8920: Practicum in Critical Studies in Educational Foundations**
- **Component:** Practicum
- **Cred Hours:** 1 to 9
- **Repeat Hours:** 100
- **General Education:** I
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Practicum in school, community or organizational settings related to critical studies in educational foundations theories.

**EDCS 8940: Research in Critical Studies in Educational Foundations**
- **Component:** Research
- **Cred Hours:** 1 to 9
- **Repeat Hours:** 100
- **General Education:** I
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Research in critical studies in educational foundations theories.

**EDCS 8950: Dissertation in Critical Studies in Educational Foundations**
- **Component:** Dissertation
- **Cred Hours:** 1 to 12
- **Repeat Hours:** 999
- **General Education:** I
- **Perm:** G50
- **Subsidy Level:** 0
- **ELIGIBLE GRADES:** GEC4: A-F, CR, PR
- **COURSE DESC:** Dissertation in critical studies in educational foundations supervised by a faculty member.

<td>COURSE DESC:</td>
<td>Introduces designing instruction in mediated environments. Teaches how to analyze, implement and evaluate instructional experiences, particularly those delivered through or mediated through digital communication and interaction technology. Reviews how to conduct a needs analysis, task analysis and learner analysis. Will utilize these analysis skills to design instruction. Strategies for instructing declarative, conceptual, procedural, algorithmic knowledge covered. Utilizes strategies to create presentations, practice and feedback systems. These systems require assessment and evaluation to create congruent learning experiences. Skills applicable to any learning situation, however, particular attention paid to mediated environments (computer tutorials, simulations, games, etc.). Each week a component of instructional design is done leading to a final project demonstrating their abilities. Traditional midterm and final examinations are required. Lays foundation for the rest of the masters program.</td>

<td>Addresses adult learning theory and implications for instructional strategies for adults, particularly in mediated environments. Principles of andragogy will inform the selection and development of materials, resources, activities and assessment tools for an online course development project. Distance education theory and practice and social presence for learning will be addressed. Ethical and legal uses of copyrighted materials in e-learning environments will be discussed along with accessibility issues that affect the development of online instruction. The impact of learner differences (e.g., culture/race, ability/disability, gender, age, socioeconomic status, and family influences) in the delivery of e-learning for adults will also be discussed.</td>

**Course Description:** Completion of the dissertation is the culminating research for completing a Doctor of Philosophy in instructional technology. Dissertation involves original research that adds to the scholarship of the field of instructional technology.

**Eligible Grades:** GEC5: CR, PR, F

**Requisite:** Permission required

| EHS EDST | EDST | 2520 | Administration of Education in Non-Western Cultures | Lecture | 3 | 0 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 2520 | Administration of Education in Non-Western Cultures | Lecture | 3 | 0 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 2520 | Administration of Education in Non-Western Cultures | Lecture | 3 | 0 | N | U30 | 0 | | | | |

**Course Description:** Study of educational administration in non-western cultures. The course focuses on introducing students to non-western cultures with a particular focus on Africa, Asia and Latin America. It seeks to provide the starting point for the development of a more open and diverse view of the development of various approaches to educational thought and practice. The content and activities will help students appreciate the fact that other societies as a consequence of different socio-cultural context possess "ways of knowing" although different, may be every bit as valuable and worthwhile as those to which students are accustomed.

**Eligible Grades:** GEC3: A-F, CR

**Requisite:**

| EHS EDST | EDST | 2520 | Special Topics in Education - Administration | Lecture | 1 to 15 | 999 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 2520 | Special Topics in Education - Administration | Lecture | 1 to 15 | 999 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 2520 | Special Topics in Education - Administration | Lecture | 1 to 15 | 999 | N | U30 | 0 | | | | |

**Course Description:** Specific course content will vary with offering.

| EHS EDST | EDST | 4200 | Comparative Cultures and Education | Lecture | 3 | 0 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 4200 | Comparative Cultures and Education | Lecture | 3 | 0 | N | U30 | 0 | | | | |
| EHS EDST | EDST | 4200 | Comparative Cultures and Education | Lecture | 3 | 0 | N | U30 | 0 | | | | |

**Course Description:** Emphasis on distinctive cultural, economic, and political forces which shape patterns, problems, and roles of education in developed and developing nations, including western and non-Western countries in the U.S., Europe and selected areas in Africa and/or Asia where former or present Western culture has continuing influence, with emphasis on education systems and development.

| EHS EDST | EDST | 4900 | Special Topics in Education - Administration | Lecture | 1 to 15 | 999 | N | U30 | 0 | | | | |

**Course Description:** Field-oriented internship experience in educational administration (principalship).

| EHS EDST | EDST | 6000 | Foundational Awareness of Education Public Policy Issues | Lecture | 2 | 0 | N | G50 | 0 | | | | |
| EHS EDST | EDST | 6000 | Foundational Awareness of Education Public Policy Issues | Lecture | 2 | 0 | N | G50 | 0 | | | | |
| EHS EDST | EDST | 6000 | Foundational Awareness of Education Public Policy Issues | Lecture | 2 | 0 | N | G50 | 0 | | | | |

**Course Description:** Students receive a foundational awareness of public policy issues in education. Topics explored offer an overview regarding how individuals involved with education public policy can develop an understanding of the education public policy process. Students consider how education public policy topics reach the public policy agenda and how agenda items are formulated. Additionally, students explore the development of select K-12 education public policy issues. Students also learn about the interplay between the power, policy and politics in education public policy-making.

**Course Descriptions:**

- **Issues, Institutions and Stakeholders in Education Public Policy:** Prepares aspiring administrators to use various technologies including telecommunications and information systems to enrich curriculum and instruction as well as to manage the business functions of schools and districts. Students also engage in library and electronic research, interviews, questionnaires, etc., to develop the "data gathering" portfolio required as part of the principal's preparation program.

- **Education Public Policy Implementation and Evaluation:** This course reviews significant educational laws, court cases and policies that affect teaching and learning in today's schools. This course identifies ethical issues that affect the students' understanding of educational policy and policy formation. Additionally, the course helps students identify ways that they can use these laws and policies to create a more equitable educational system. Topics covered include: an overview of the role of federal, state, local governing bodies, non-government agencies, lobbyists, and other stakeholders on the policy making process for K-12 education. Exploration of the politics of education and institutional agendas is a major component.

- **Legal Issues in Education:** This course offers an introduction to historical and contemporary legal issues occurring in school settings with a focus on legal literacy that reflects competent, caring, culturally responsive, and social justice oriented approaches to solutions. Topics explored include legal rights, requirements and key federal court cases that have shaped K-12 policies and procedures.

- **Policy Perspectives in Education:** This course introduces concepts of leadership and organizational behavior and how these concepts affect teaching and learning in classrooms and schools. The nature and role of leadership will also be analyzed in relation to students, peers, administration, community, professional associations and society at large.

- **Introduction to Leadership and Organizational Behavior:** This course introduces concepts of leadership and organizational behavior and how these concepts affect teaching and learning in schools. The nature and role of leadership are examined in relation to school stakeholders. In addition, this course introduces key concepts, theories, and perspectives of leadership and organizational behavior that inform the work of educational leaders. Students consider concepts, theories, and perspectives regarding organizational theory and how it applies to school and district organizational structures. Finally, the implications of school and district organizational structures on policy and practice are considered.

- **Structure and Behavior in Educational Organizations:** Considers organizational and behavioral theory as applied to the existing structure of schools and other educational agencies such as colleges, universities, private, and alternative schools.

- **The School and Community:** Addresses the nature and history of relationships between schools and community with regard to opportunities and challenges for leadership.

- **Technology for School Leadership:** Prepares aspiring administrators to use various technologies including telecommunications and information systems to enrich curriculum and instruction as well as to manage the business functions of schools and districts. Students also engage in library and electronic research, interviews, questionnaires, etc., to develop the "data gathering" portfolio required as part of the principal's preparation program.

<td>Focuses on studies in learning as a social process with emphasis on the non-Western experience among others. Aims at expanding students understanding of education through the examination of other approaches to educational thought and practice. Ultimate aim is to immensely enhance students understanding of their own traditions through a better understanding of educational traditions of other societies and cultures. Predisposes students to re-orient themselves and place them in positions to reexamine and critically reflect on their own traditions in somewhat different ways. Our increasing interdependence in a global context makes it imperative that we understand how other societies solve similar problems in education. Among the countries and regions to be interrogated are Malaysia, Singapore, China, sub-Saharan Africa, Austria, U.S., Canada, Australia and New Zealand.</td>

<td>Interdisciplinary course focuses on the role of learning systems in changing developing societies; historical and ethnographic studies of pre-colonial, colonial, and post-independence education; and education and training as tools for contemporary change and socioeconomic development. What are the implications of these for any given educational setting? Who are marginalized by the way we conduct education? What is the individual's responsibility in building a community? How is education connected with Development and vice versa? The challenges posed to these traditions in an increasingly global world community in the 21st century are discussed. Designed not to answer questions but to question answers. This mode of thinking can create space for dialogue that will assist each of us to come to a fuller understanding of the role of education in our respective societies as well as the world at large.</td>

<td>In this course, students learn about the historical and theoretical underpinnings of qualitative methodology. Students utilize the three primary methods of data collection in qualitative research: documents, interviews and observations. Students examine the different theories, sampling strategies, analysis and research designs employed in qualitative methodology. Students design a qualitative inquiry project and explore how to ensure credibility and trustworthiness in the findings of their research. Finally, ethics, CITI and IRB protocols are addressed.</td>

<td>COURSE DESC:</td>
<td>The purpose of this course is to introduce students to the development of qualitative interviews as a method. The course examines the process of designing different kinds of qualitative interviews. In the course, students engage in conducting three different kinds of interviews, preparing transcripts of interviews, and analyzing qualitative data. Finally, students examine different theoretical approaches to interpreting interview data.</td>

<td>COURSE DESC:</td>
<td>In this advanced research course students study various qualitative data analysis techniques and examine ways in which different theories inform the analysis and interpretation of various qualitative data sources. This course in qualitative data analysis informs students about the history, substantive theories, research designs and the inductive methods employed to conduct qualitative data analysis. Additionally, students engage in learning about the different computer assisted qualitative data analysis software and traditional data analysis procedures. In sum, this course assists doctoral students in disseminating the outcomes of their qualitative research through developing skills for documenting their data analysis processes, procedures and findings.</td>

<td>COURSE DESC:</td>
<td>This course provides an introduction of mixed methods research in social and educational sciences to graduate students who are already familiar with quantitative and qualitative research and students who may conduct mixed method researches/dissertations. Mixed methods research is more than simply collecting both quantitative and qualitative data, and instead, it integrates quantitative and qualitative methods from the research-planning phase to the implementation phase. This course focuses on major characteristics of mixed methods and three basic designs, i.e., convergent parallel design, explanatory sequential design, and exploratory sequential design. It offers individuals a foundation for conducting mixed methods research.</td>

<td>COURSE DESC:</td>
<td>Youth mentoring programs have proliferated in recent years. This course identifies why mentoring programs have become popular tools to promote self-esteem amongst adolescents, as well as what effective mentoring looks like. In this service-learning course, students have the opportunity to be paired with local area middle school 7th and 8th graders and Ohio University's Women's Center to conduct the Young Women's Leaders Program. This program has a gendered focus in looking at the experiences of women but is open to anyone who believes they would benefit from a program with that lens. If students would like to be considered as a mentor, they are required to complete both a BCI and FBI background check. The fee for this totals $62 and should be paid for by the student. Additionally, the service learning requires that students continue mentoring at the middle school through the spring term on Wednesdays (3:05-5:05), though they will no longer be enrolled in the course. For those unable to commit to that service learning, there is an alternate service learning option that will enable students to create workshops that may be used with parents of those in the Young Women Leaders Program. In addition to information on mentoring generally, this course takes a gendered approach to understanding the particular challenges that adolescent girls face both within and outside of school. This is a designated service-learning course.</td>

**COURSE DESC:**

- **Lecture 1**
  - This course is part of a 12 hour professional development institute designed to enable in-service teachers working under an Ohio Department of Education issued Alternative License to meet the state requirements for a 5 year Professional License. This course is intended for multiple licensure bands and content areas. The purpose of this course is to explore development and learning across the life cycle (early years to young adulthood) and to enhance understanding of and ability to think, plan lessons for and write critically about the ways that theories of human development are dynamic, rather than static. In addition, this course prepares the learner to understand the ways curriculum is designed around the development of the child including instructional goals and objectives that are measurable, articulate scope and sequence that is logical and understand how academic standards are arrived at and approved.

- **Lecture 2**
  - During this workshop, current P-12 teachers examine various approaches to mentoring early field experience preservice teacher candidates. Discussions address topics such as planning and goal setting, getting teacher candidates involved and engaged with the students and their instruction, and encouraging reflection. Finally, special attention is given to the utilization of teacher candidates to increase instructional opportunities for students and personal growth opportunities for teachers. At the completion of the 15 clock hours of on-line facilitated learning and assignments of the workshop, participants receive a Certificate of Completion and 1 semester hour of graduate credit. This course cannot be used towards any Ohio University degree requirements.

- **Lecture 3**
  - This professional development workshop is designed for P-12 teachers working with students and families who have experienced trauma and substance abuse. The modules focus on helping students develop individual and relational resources. This module compliments the HOPE (Health and Opioid Prevention Education) curriculum funded by the Ohio Department of Higher Education and developed by health educators and classroom teachers.

- **Lecture 4**
  - This workshop focuses on providing in-service teachers with knowledge and skills they will use while working with teacher candidates in order to support their growing capacities in professionalism and teacher leadership. Growth in professionalism and teacher leadership is explored for the purposes of modeling and scaffolding a deeper understanding of professional ethics, policies, operating standards and professional conduct of educators.

- **Lecture 5**
  - This professional development workshop is designed for P-12 teachers working with students and families who have experienced trauma and substance abuse. The modules focus on helping students develop individual and relational resources. This module compliments the HOPE (Health and Opioid Prevention Education) curriculum funded by the Ohio Department of Higher Education and developed by health educators and classroom teachers. At the completion of the 15 clock hours of online facilitated learning and assignments, participants receive a Certificate of Completion and one semester hour of graduate credit. This workshop cannot be used toward any Ohio University degree requirement.

- **Lecture 6**
  - This professional development workshop is designed for educators working in P-12 settings. The modules focus on identifying and selecting effective educational strategies supported by evidence and research, implementing evidence-based practices or programs with fidelity, and evaluating the effectiveness of evidence-based practices with one's own students. At the completion of the workshop, participants receive a Certificate of Completion and one semester hour of graduate credit. This workshop cannot be used toward any Ohio University degree requirements.

This course emphasizes techniques for using reading and writing as tools for the acquisition of new content in any given discipline. The area of general literacy skills, prior knowledge of content, content-specific literacy skills and understanding of the nature of reading instruction in multiple grade levels are concepts stressed. Concepts including ESL/ELL teaching and learning theories and ESL/ELL instructional strategies are discussed. For teachers working on an elementary, middle childhood and intervention specialist license, this course also emphasizes reading instruction including emergent literacy, word recognition, fluency, vocabulary, and comprehension.</td>

<tr>
<td>COURSE DESC:</td>
<td></td>
<td></td>
<td></td>
<td>This self-paced course is part of a 15-hour professional development institute (PDI) for secondary teachers and an 18-hour PDI for intervention specialists, elementary and middle school teachers designed to enable in-service teachers working under an Ohio Department of Education issued Alternative License to meet the state requirements for a 5-year Professional License. Content is focused on national, state and local curriculum requirements, developing appropriate, rigorous, and measurable instructional objectives, creating long term and intermediate term plans while using instructional objectives and district and state approved academic content standards. Adaptations and curricular modifications based on student needs, choosing and aligning appropriate curriculum materials, and how high stakes testing impacts curriculum development are stressed, as will how curriculum development aligns with the Ohio Standards for the Teaching Profession.</td>

ELIGIBLE GRADES: GEC3: A-F, CR

COURSE DESC: Specific course content will vary with offering.

ELIGIBLE GRADES: GEC2: A-F, CR

COURSE DESC: Research and independent study in a student selected area of clothing and textiles.

ELIGIBLE GRADES: GEC1: A-F, Jr or Sr

COURSE DESC: Creative apparel design and interpretation with emphasis on flat pattern manipulation. Critical analysis of design problems and demonstration of creative solution to apparel fit and construction challenges.

ELIGIBLE GRADES: GEC1: A-F, Jr or Sr

COURSE DESC: Designing of apparel using draping techniques. Emphasis on fabric as medium rather than pattern development in design process.

ELIGIBLE GRADES: GEC1: A-F, CR, PR

COURSE DESC: Various dressing techniques and functional design alternatives available to increase independence of individuals with special needs. Focus on such populations as the elderly, mentally disabled, and temporarily or permanently physically disabled.

ELIGIBLE GRADES: GEC4: A-F, CR, PR

COURSE DESC: Contemporary uses and roles of textiles and clothing as affected by economic, social, and psychological forces seen in historic perspective.

<td>The purpose is to help students understand the function of theory and examine theoretical components in merchandising. Helps students to be able to discuss the process of concept and statement development and to explain how these contribute to theory development in Apparel, Textiles and Merchandising (ATM). Students will analyze and critique theories in merchandising such as Theory of Fashion Process, Consumer Attitude Theories, Diffusion of Innovations Theory and Fashion Leadership Theory.</td>

</table>
EHS RSPC COED 5911 Instructional Experience Field 1 to 10 10 N G40 0
ELIGIBLE GRADES: GEC5: CR, PR, F
REQUISITE: Permission required
COURSE DESC: This course provides students with the opportunity to gain supervised/independent practical experience in organizing and teaching activities related to a sport in an academic/college teaching environment.

EHS RSPC COED 6050 Coaching Athletes with Disabilities Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC1: A-F
REQUISITE: PR
COURSE DESC: This course explores theoretical components and contextual environments for coaching athletes with disabilities. Students examine the historical evolution of participation, competition, coaching practices, and inclusion of athletes with disabilities within diverse contexts of physical activity and sport.

EHS RSPC COED 6100 Coaching Workshop I Seminar 1 to 3 6 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course prepares students to become effective online learners by working with faculty and/or sport coaching experts in workshops of varying length and complexity.

EHS RSPC COED 6101 Coaching Workshop II Seminar 1 to 3 6 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: COED 6100
COURSE DESC: This course provides students with an opportunity to work with faculty and/or sports coaching experts in workshops of varying length and complexity to plan their ongoing professional development as a coach.

EHS RSPC COED 6110 Foundations of Coaching I Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course focuses on developing students' knowledge of effective coaching methods and the principles that underpin them across the range of developmental coaching levels. Students apply knowledge to create a system for long-term success, which can be maintained across each season of the coaching cycle.

EHS RSPC COED 6115 Foundations of Coaching II Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: COED 6110
PR
COURSE DESC: This course exposes students to a models-based approach to coaching and its application to coaching athletes at the youth, interscholastic, and intercollegiate levels.

EHS RSPC COED 6120 Management and Leadership in Sport Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course examines contemporary theories related to management and leadership and their application to sport. Students develop the necessary knowledge, skills, and qualities for leading a sports team, program, and/or sports organization, which can be applied across a range of developmental coaching levels.

EHS RSPC COED 6130 Finance for Sport Coaches Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course provides athletic sports coaches at all developmental levels with the knowledge, skills, and qualities associated with the financial management of their programs.

EHS RSPC COED 6140 Psychology of Coaching Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course provides an analysis of how psychological factors influence coaches' understanding of athlete/team well-being and performance. The focus of this course is on the psychological theories and principles and their application in sport coaching environments.

EHS RSPC COED 6150 Injury Prevention & Risk Management Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course explores the responsibilities of coaches toward athlete safety, pertaining to risk of injury, illness, rest, and appropriate recovery from injury.

EHS RSPC COED 6160 Performance and Conditioning for Athletic Coaches Lecture 3 0 N G40 0
ELIGIBLE GRADES: GEC2: A-F
REQUISITE: PR
COURSE DESC: This course explores the physiological concepts of the human body and their relationships with improving sports performance. The course specifically focuses on the analysis of the physiological demands of various sports and students examine how individual athletes physiologically adapt to different training stimuli depending on their gender, age, and other environmental factors.

**COURSE DESC:**

- Ethics and Diversity in Athletic Coaching: This course examines ethical and diversity issues pertaining to athletic coaches. The primary focus is on the students' development of critically reflective reasoning skills which guide ethically sound decision-making when conducting diverse coaching activities.

- Utilizing Technology in Athletic Coaching: This course prepares athletic coaches to effectively utilize technology to improve athlete learning in youth, interscholastic, intercollegiate, and elite coaching settings.

- Coaching through Games: This course allows students to explore opportunities to enhance their practice design and coaching effectiveness through the practical application of Game-Based Approaches.

- Research and Analysis Methods for Athletic Coaches: This course explores methods of research inquiry that enhance athletic coaches' ability to become reflective practitioners.

- Coaching Soccer: The Beautiful Game: In this course, students explore what soccer coaches need to know about being a coach and how they will teach the beautiful game to players at all developmental levels. The content of this course centers on developing an athlete-centered soccer coaching philosophy, the utilization of effective coaching approaches in the development of seasonal and daily practice plans, player and coach learning, soccer coach reflection, and self-care.

- Concepts of Soccer Player Development: In this course, students examine developmentally appropriate principles and practices for coaches when working with youth soccer players aged 12 and under. This includes growth and maturation issues, physical and psychomotor characteristics, motor development, cognitive learning, and psycho-social issues.

- Reading, Writing and Applying Research for Sport Coaches: This course provides students with the opportunity to read and demonstrate an understanding of current research, write about research methods and practices, and apply research in sports coaching.

- Social Dynamics in Sports Coaching: This course exposes students to the sociological dynamics of coaching through the utilization of different social theories and how they apply within the sports coaching domain. The course explores the work of a number of key social theorists so that students can understand sociological themes and how these themes affect athletes learning and development.

COURSE DESC:
- Soccer: The Global Game: This course will explore the origins of the world's most popular sport, the laws that govern it and how it has evolved through history. A focus on famous players, teams and coaches as well as World Cup and other notable championships will be covered. Additionally, the impact of the game on youth, culture and society from a global standpoint will be analyzed.
- Advanced Soccer Player Development: This course focuses on the coach's role in technical, tactical, physical, and psychosocial development for soccer players aged 14 and older.
- Leadership and Team Dynamics in Soccer: This course explores leadership theory and practices for soccer coaches and identifies team building strategies, game and practice management responsibilities, scheduling, travel, budget, fundraising, equipment purchasing, recruiting, and other pre/in/off season management tasks. Unique soccer management responsibilities at the youth, interscholastic, club, intercollegiate, and professional levels of soccer are also included.
- Training and Conditioning for Soccer Coaches: This course presents principles and applications of athletic performance for soccer coaches. Content includes the development of an understanding of the physiological basis of training and adaptation in the areas of aerobic and anaerobic fitness, strength and power, flexibility, and speed and agility. Students also study principles of periodization and program design to create both in-season and off-season training plans for soccer players.
- Sport Performance for Athletic Coaches: This course provides students with an opportunity to apply their knowledge of sports performance through the design and implementation of developmentally appropriate strength and conditioning programs for teams/individual athletes.
- Performance Recovery: Strategies for Coaches: This course exposes students to the various analysis tools and methods used by sports coaching practitioners to evaluate and assess sports performance. More specifically, students analyze athlete and coach behavior utilizing a variety of technological tools.
- Coaching Performance Evaluation: This course provides students with the opportunity to demonstrate and reflect on their coaching effectiveness with athletes in their local context.
- Special Topics in Coaching Education: This course provides the opportunity for students to learn related to an emerging or specialist topic in coaching education that is not to be made part of and/or is currently beyond the scope of the regular course offerings.
- Practicum: This course provides students with the opportunity to gain supervised work experience in a coaching environment at the youth, interscholastic or intercollegiate level.

**Course Descriptions:**

- **Human and Consumer Sciences Seminar in International Service:** Special seminar or workshop for human and consumer sciences majors preparing for and participating in international service.
- **Seminar or Short Course in Human and Consumer Sciences - Research:** Advanced studies of research and recent developments in human and consumer sciences disciplines.
- **Seminar in Human and Consumer Sciences:** Prepares graduate students to develop research topics and proposals in anticipation of thesis work.
- **Consumption Theories:** Specific course content will vary with offering.
- **Special Topics in Human and Consumer Sciences Education General:** This course provides an overview of theories and research in consumer behavior. The class focuses on how and why people engage in choosing, buying, using, and disposing of goods and services in the apparel, textile, hospitality, and tourism industries.
- **Research:** Independent investigation in major area of Human and Consumer Sciences.
- **Introduction to Equines:** This course offers a foundation in basic equine science. Students will study equine history, basic anatomy, breeds, riding disciplines, and other equine-related topics.
- **Basic Equine Health Care:** Basic equine health care introduces the student to common health care issues of the horse. Students learn how to prevent and assess health care problems. They learn to assess and treat minor non-threatening injuries. They use these skills to determine when professional assistance is needed.
- **Basic Horse Handling:** Basic horse handling introduces the student to common health care issues of the horse. Students learn how to prevent and assess health care problems. They learn to assess and treat minor non-threatening injuries. They use these skills to determine when professional assistance is needed.
- **Practical Experience in Equine Facility Management I:** Practical experiences in daily operations of a commercial, multi-faceted equine facility. Gain hands-on experience working at a commercial equine facility.

**COURSE DESC:**

- **Equine Reproduction:** Comprehensive study of equine reproduction stressing the anatomy and physiology of the stallion and mare and methods of breeding, including artificial insemination, and foaling.
- **Equine Veterinary Technology:** Equine veterinary technical skills that allows students to be a strong contributor to a large animal health care team. Geared towards student that wants to work at an equine veterinary practice.
- **Therapeutic Riding: Overview and Instruction:** The course provides an overview of the therapeutic riding and equine assisted learning industry. Students examine industry areas that address industry history, therapeutic types, adaptive equipment, teaching techniques, and the therapeutic team.
- **Development and Management of the Equine Non-profit Organization:** Students explore the formation and management of an equine non-profit organization. These organizations are formed to solve problems existing within the equine industry.
- **Equine Law:** Study of the basic legal structure affecting equine business operations. Includes the study of laws related to contracts, torts, employment, and taxes.
- **Special Topics in Equine Studies:** Specific course content will vary with offering.
- **Equine Internship:** Practical experience in a specific area of equine studies pertinent to the individual's interests. Examples include working with breeders, trainers, farm and stable managers, riding instructors, breed associations or organizations, veterinarians, and related equine agencies.
- **Studies in Equine Issues:** Study of topics of current interest in the horse industry.
- **Exercise and Conditioning:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of the respective physical activity or sport. Students will be graded based on knowledge and participation.

**Course Descriptions:**
- **Trail Running:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit, history, safety, and etiquette of trail running. Students will be graded based on knowledge and participation.
- **Fundamentals of Triathlon Training:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of triathlon training. Students will be graded based on knowledge and participation.
- **Physical Conditioning I:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of the respective physical activity or sport. Students will be graded based on knowledge and participation.
- **Aqua Aerobics:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. Students will gain a thorough working knowledge, appreciation, and understanding of the safety, techniques, movements, and etiquette of aqua aerobics.
- **Fundamentals of Swimming:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of swimming. Students will be graded based on knowledge and participation.
- **Fundamentals Swim Conditioning:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit, safety, and etiquette of swim conditioning. Students will be graded based on knowledge and participation.
- **Fundamentals of Horseback Western Seat:** Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of the respective physical activity or sport. Students will be graded based on knowledge and participation.
- **Intermediate Horseback Western Seat:** Builds upon knowledge gained in fundamental horseback and is designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of the respective physical activity or sport. Students will be graded based on knowledge and participation.
- **Advanced Horseback Western Seat:** Builds upon the intermediate horseback course and is designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of hunt seat horseback riding. Students will be graded based on knowledge and participation.

Intermediate Water skiing

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate water skiing. Students will be graded based on knowledge and participation.

Intermediate Karate

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate karate. Students will be graded based on knowledge and participation.

Intermediate Tae Kwon Do

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate tae kwon do. Students will be graded based on knowledge and participation.

Intermediate Judo

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate judo. Students will be graded based on knowledge and participation.

Intermediate Belly Dance

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit, history, safety, and etiquette of intermediate belly dancing. Students will be graded based on knowledge and participation.

Intermediate Racquetball

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of racquetball. Students will be graded based on knowledge and participation.

Intermediate Triathlon Training

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will gain a thorough working knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of the respective physical activity or sport. Students will be graded based on knowledge and participation.

Intermediate Swimming

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate swimming. Students will be graded based on knowledge and participation.

Intermediate Swim Conditioning

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of intermediate swim conditioning. Students will be graded based on knowledge and participation.

Advanced Swimming

COURSE DESC: Designed to help students gain the knowledge and skills necessary to develop a lasting interest in attaining and maintaining personal health and wellness throughout their lifetime. In addition, students will advance their knowledge, appreciation, and understanding of the spirit and rules, history, safety, and etiquette of advanced swimming. Students will be graded based on knowledge and participation.

<td>COURSE DESC:  This course is designed to refine the teaching methodology of pre-service teachers in physical education at the early childhood and elementary level. Pre-service teachers learn best teaching practices, principles and theories for planning, instruction, and assessment. Knowledge is applied within clinical placements under the supervision of clinical educators and mentor teachers. Pre-service teachers analyze teaching effectiveness through reflective practices and clinical evaluations.</td>

**COURSE DESC:** Provides students with a fundamental understanding of the rescue skills needed for multi-pitch climbs, traditional climbing, and sport climbing. Students will have the opportunity to learn a variety of techniques for a speedy and safe descent in times of emergency or inclement weather. To maximize learning, students will be confronted with a number of different rescue scenarios from which they can practice and apply new knowledge and skills.

- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** Sr and Physical Activity and Sport Coaching major and PETE 4960 concurrent

- **COURSE DESC:** This course focuses on the importance of professional development in the field of physical activity and sport coaching. This course is designed to provide an understanding of their responsibilities in continually developing and maintaining professional competencies as practitioners in the respective physical activity and sport coaching field. This course also provides students with guidance in developing professional portfolios related to their physical activity and sport coaching field. This course is taken concurrently with the internship course (i.e., PETE 4910).

- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** Sr and Physical Activity and Sport Coaching major and PETE 4910 concurrent

- **COURSE DESC:** Introduces students to the knowledge and skills needed to safely and enjoyably participate in winter camping and backpacking experiences. Topics include trip planning, equipment selection and use, nutrition and meal planning, navigation and travel techniques, campsite selection, water treatment, cooking, human waste disposal, environmental ethics, safety and risk management, and the benefits of backpacking.

- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** Sr and Physical Activity and Sport Coaching major and PETE 4910 concurrent

- **COURSE DESC:** Will primarily be taught as an official State of Ohio Hunter Education Course. Upon successfully completing the course, you will be eligible to become a licensed hunter in Ohio.

- **ELIGIBLE GRADES:** GEC1: A-F
- **REQUISITE:** Sr and Physical Activity and Sport Coaching major and PETE 4910 concurrent

- **COURSE DESC:** Provides students with a supervised experience in a professional physical activity and sport coaching organization/agency. This course is taken concurrently with the seminar course (i.e., PETE 4960).

**COURSE DESC:**
- **Intermediate Mountain Biking:** Introduces students to the knowledge and skills required to safely and enjoyably participate in intermediate level mountain biking. Students will participate in a weekend trip to learn and practice associated skills.
- **Advanced Mountain Biking:** Introduces students to the knowledge and skills required to safely and enjoyably participate in advanced level mountain biking. Students will participate in a weekend trip to learn and practice associated skills.
- **Scuba Diver:** Designed to train students to plan and execute safe and environmentally sound open-water, entry-level recreational SCUBA dives. In addition, although a certification is not guaranteed, course content and organization are designed to prepare students for open-water certification checkout dives.
- **Advanced Scuba Diver:** Designed to train students to plan and execute safe and environmentally sound open-water, entry-level recreational SCUBA dives. In addition, although a certification is not guaranteed, course content and organization are designed to prepare students for open-water certification checkout dives.
- **Scuba Rescue Diver:** Provides certified scuba divers with additional training, diving experience and an orientation to a variety of diving sites, conditions and activities. Apply your scuba skills as you explore new dive sites and activities. Learn which diving specialties interest you and what type of diving you enjoy most. Gain more confidence and capability. Begin to consider the directions diving will take you.
- **Adventure Challenge Course:** Provides the opportunity to demonstrate low and high rope skills and to practice facilitation techniques.
- **Adventure Experience Practicum for Incoming Practitioners:** The course uses adventure learning as a means to improve interpersonal skills, leadership skills, and self-efficacy. The course consists of a half-day orientation and a multi-day wilderness expedition. Students will develop wilderness living and travel skills specific to the particular program area in which the practicum is conducted and the form of wilderness travel used during the practicum (e.g., canoeing, kayaking, backpacking, and climbing).
- **Introduction to Parks, Recreation & Leisure:** Provides a broad understanding of the value of recreation and leisure in society. Emphasis is placed on the role of recreation and leisure in promoting health and well-being in individuals as well as nurturing and maintaining vibrant communities. Topics include historical and theoretical perspectives of the value of recreation and leisure in society, the diversity of recreation and leisure pursuits across cultural contexts, the nature of recreation and leisure throughout the lifespan, the use of recreational spaces in facilitating positive youth development, the role of recreation and leisure in promoting community development, and the scope of the parks, recreation, and leisure services industry.
- **Outdoor Recreation and Education:** Introduces students to outdoor recreation and education as a professional practice. Students examine the broad scope of the profession while exploring its value to society. Emphasis is placed on the theory and practice of leadership in outdoor recreation and education. Topics include historical and philosophical foundations of outdoor recreation and education, theories of leadership, judgment and decision-making, values and ethics, teaching and facilitation, safety and risk management, and environmental stewardship.
- **Inclusive Recreation:** This course will introduce students to the concepts, methods, and settings for developing inclusive recreation services for diverse populations. These concepts and methods can be applied to individuals and groups that may need adaptations for inclusive recreation services. Students will gain knowledge in universal access, design, and inclusion in community settings.

**COURSE DESC:** Teaches recognition and avoidance of common river hazards, execution of self-rescue techniques, and rescue techniques for paddlers in distress. Emphasis is placed both on personal safety and on simple, commonly used skills. Techniques for dealing with hazards that carry greater risks for both victim and rescuer, such as strainers, rescue vest applications, entrapments, and pins, also are practiced. Scenarios will provide an opportunity for participants to practice their skills both individually and within a team/group context.

COURSE DESC: Outdoor Leadership
This course is an intensive 25-30-day, field-based course designed to teach students the knowledge, skills, and dispositions required for effective outdoor leadership. The course helps students refine basic wilderness living skills and develop expertise in specialized modes of wilderness travel. Students develop leadership and teaching skills needed to facilitate safe, enjoyable, and environmentally responsible wilderness-based programs.

COURSE DESC: Master Scuba Diver
The Master Scuba Diver course is a certification course for scuba divers who wish to increase their understanding and enjoyment of scuba diving. This is the highest certification in the National Association of Underwater Instructors (NAUI) Recreational Track and helps students develop the knowledge, skills and experience for matriculation into the NAUI Leadership Track.

COURSE DESC: Coastal Kayak Instructor Certification
Emphasizes various teaching strategies and learning styles in preparing students to provide high quality instruction to beginner coastal kayakers. The student will learn to prepare lesson plans, give presentations, and provide evaluative feedback to students. This an American Canoe Association coastal kayak instructor certification course. Successful instructor candidates must demonstrate effective group leadership skills, paddling proficiency, technical knowledge, and teaching competency.

COURSE DESC: Environmental Interpretation
The art of interpretation is a process of communication, designed to produce both an emotional and intellectual bond between an audience and the cultural and/or natural resources that are the subject of interpretation. Will help students develop an understanding of the principles and techniques necessary for effective interpretation, with a specific focus on interpreting cultural and natural resources in parks and protected areas. Students will design and construct interpretive materials and address how these materials may serve as an important tool in parks and protected areas management.

COURSE DESC: Parks & Protected Areas Management
Provides students with an understanding of the principles and practices of parks and protected areas management.

COURSE DESC: Recreation Administration
Administration, management, and leadership concepts and theories. Foundations of management, principles and procedures of human resource management, understanding of the principles and procedures of budgeting and financial management, and legal foundations.

COURSE DESC: Principles of Ecotourism
Introduce students to both theory and practical applications of concepts surrounding ecotourism and sustainable development. An understanding of the benefits and weaknesses of ecotourism as a sustainable development approach is the focus of the course. Theory, practice, history, terminology and issues of ecotourism planning and management are examined. Additionally, the motives and behaviors of tourists, natural resources as attractions and destinations, social and resource responsibility and establishing policies and principles for sustainability are discussed.

COURSE DESC: Convention and Event Planning
Synthesis of sequence of events required in planning a convention, meeting, or function in either a professional or social setting.

COURSE DESC: Festival and Special Event Operations for Parks, Recreation, and Leisure Services
RECU 3630/5630 provides a comprehensive overview of festival and special event operations within parks, recreation, and leisure service organizations. The course examines festival and special event design, venue identification, funding development, volunteer management, community partnerships, site planning, and other operational concepts related to festivals and special events within parks, recreation, and leisure service agencies.

COURSE DESC: Writing for Recreation Studies
Allows the student to practice the writing process while investigating current issues and trends in the recreation and leisure field.

COURSE DESC: Independent Study
Student chooses a topic of special interest with the assistance of a faculty member.

<td>REC 4570/5570 aims to expose students to the adventure travel industry as part of a short-term study abroad experience. Each year, millions of people seek out adventure travel experiences as a means of satisfying their need to explore the planet and to interact with the many people and cultures within it. This course examines the way in which certain commercial operators have transformed adventure travel into a social enterprise that maximizes improvements in social and environmental well-being. Students gain a unique perspective for social entrepreneurship and its application within adventure travel. The course considers how social value creation can align with economic value generation, and unpacks the specific business strategies certain adventure travel operators employ to ensure that host communities touched by adventure travel benefit from the opportunities it provides.</td>

<td>This internship course is taken at the same time that on-the-job experience in the fashion industry is being completed. This course includes cooperation with fashion industry, retail and fashion merchandising establishments through communication among the student, the instructor and the workplace supervisor. Students complete assignments specific to the responsibilities they have on the job in order to gain experience and knowledge of the fashion industry. Students enroll in 3 (100), 6 (200), 9 (300), or 12 (400) credit hours, with the minimum number of work hours commensurate as noted in parentheses. Students must be enrolled in the class during the time that they engage in on-site work.</td>

### SLS 4900 Special Topics in Sport and Lifestyle Studies
ELIGIBLE GRADES: CR, PR
COURSE DESC: The course examines the total enterprise, the industry, and the competitive environment in which the enterprise and industry operate. Students develop a mastery of the analytical tools to perform analyses of the industry and competitions. The course focuses on how hospitality and tourism firms formulate, implement, and evaluate strategies. Using a case-based approach, the course emphasizes becoming an effective industry leader through critical thinking and decision making to maintain an enterprise’s competitive advantage in a hyper-competitive and maturing industry.

ELIGIBLE GRADES: Senior in SLS major
COURSE DESC: This course will focus on the development of fundamental movement skills and game leadership abilities needed to work in the field of sport and physical activity. Topics will include fundamental motor patterns, movement skill progression, promoting participation, group development, leadership styles, and guidelines for an active lifestyle. Lab activities will require active participation and leadership of sport and game activities as well as individual skill demonstration.

### SLS 3900 Professional Development in Sport and Lifestyle Studies
ELIGIBLE GRADES: Jr or Sr
COURSE DESC: Emphasizes the importance of professional development in the field of sport and lifestyle studies. The course will challenge students to think critically about a wide variety of complex issues and concepts relevant to the discipline and its future.

### SLS 3010 Ethics and Risk Management in Sport and Physical Activity
ELIGIBLE GRADES: SLS Major and (jr or sr)
COURSE DESC: This class will serve as a capstone experience for the Sport and Lifestyle Studies major. Students will assimilate materials from previous coursework toward the development of a portfolio. Students will demonstrate their potential contribution to the professional field utilizing a synthesis of prior learning experiences in the development of an extensive service-learning project. The course will challenge students to think critically about a wide variety of complex issues and concepts relevant to the discipline and its future.

### SLS 2900 Special Topics in Sport and Lifestyle Studies
ELIGIBLE GRADES: Jr or Sr
COURSE DESC: Specific course content will vary with offering. Course will focus on practical application of specialized topics and activities relevant to sport and lifestyle studies.

### SLS 2000 Sport and Physical Activity Skill Development
ELIGIBLE GRADES: Jr or Sr
COURSE DESC: Specific course content will vary with offering. Course will focus on practical application of specialized topics and activities relevant to sport and lifestyle studies.

### SLS 2000 Sport and Physical Activity Skill Development
ELIGIBLE GRADES: SLS Major and (jr or sr)
COURSE DESC: Specific course content will vary with offering. Course will focus on practical application of specialized topics and activities relevant to sport and lifestyle studies.

### SLS 2000 Sport and Physical Activity Skill Development
ELIGIBLE GRADES: Jr or Sr
COURSE DESC: Specific course content will vary with offering. Course will focus on practical application of specialized topics and activities relevant to sport and lifestyle studies.

### RSP 4100 Professional Development Seminar
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: This course emphasizes the importance of professional development in the field of recreation and sport pedagogy. The course provides students with understanding of their responsibilities in continually developing and maintaining professional competency as practitioners in the field. Additionally, the course provides students with guidance in developing professional portfolios as a means for reflecting on their own professional growth and development, synthesizing their learning over the course of their studies in their programs, and portraying their level of professional competency in their fields.

### RHT 6940 Research in Hospitality
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: Independent investigation in hospitality.

### RHT 6900 Special Topics in Restaurant, Hotel and Tourism Management
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: Specific course content will vary with offering.

### RHT 6090 Strategic Management for Hospitality and Tourism
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: This course examines the total enterprise, the industry, and the competitive environment in which the enterprise and industry operate. Students develop a mastery of the analytical tools to perform analyses of the industry and competitions. The course focuses on how hospitality and tourism firms formulate, implement, and evaluate strategies. Using a case-based approach, the course emphasizes becoming an effective industry leader through critical thinking and decision making to maintain an enterprise’s competitive advantage in a hyper-competitive and maturing industry.

ELIGIBLE GRADES: GEC1: A-F
REQUISITE: (Jr or Sr) and permission required

The Capstone class is a summative experience for the Aging Inclusion certificate. It focuses on a project of the student's choice and design, which integrates the knowledge gleaned from the certificate coursework and applies it to the student's personal and/or professional career interests. This project will require students to synthesize information from various topics related to aging into a cohesive whole.

| EHS     | RSPC | T3  | 4710 | Sport Aesthetics | Lecture | 3          | 0            | 3                | N    | U30           | CORRESPOND 0    |                  |

ELIGIBLE GRADES: Sr only

This course analyzes sport as a subject of aesthetic value and valid source for moral education. Students investigate watching sport as a focus of profound emotional experience and nature of allegiance. Observing sport as purists and partisans are differentiated. Students examine the philosophical issues around watching sport and investigate the parallels with art and theatre.

| EHS     | RSPC | T3  | 4720 | Clothing and Culture | Lecture | 3          | 0            | 3                | N    | U30           | CORRESPOND 0    |                  |

ELIGIBLE GRADES: Sr only

Knowledge and understanding are built through the interdisciplinary study of apparel, appearance, and cross-cultural influences in variations and functions of dress. Student exploration to focus on apparel and appearance norms as a cultural universal. Emphasis on research methods, resources and activities relating to cultural/subcultural patterns.

| EHS     | RSPC | T3  | 4725 | Women and Leadership: Roles and Responsibilities | Lecture | 3          | 0            | 3; CAP           | N    | U30           | 0              |                  |

ELIGIBLE GRADES: (PSY 1010 or SOC 1000) and Sr only

This capstone course is an analysis of women in leadership roles in relation to historical, sociological, psychological, and economic perspectives. Students develop reflective practices and strategies for developing leadership skills through research, negotiation and communication.

<td>COURSE DESC: Second of two introductions to children and their characteristics at progressive levels of development. Introduces most widely accepted and useful theories of adolescent growth and development for children ages 11-18 years. Introduces factors that influence children's learning, such as school structure, family structures, race, culture, gender, and socioeconomic status. Students examine the value and belief systems of themselves and children, as well as identify elements of successful teaching. Enhances awareness of community, equity and the common good as attributes of democratic education.</td>

COURSE DESC: Continuation of EDPL 4580. All early childhood education and early childhood and elementary education majors must complete a full-time professional internship experience for graduation and licensure requirements. This internship provides students an embedded teaching experience in an elementary setting under the guidance of a mentor teacher. Students plan and implement learning experiences that are developmentally appropriate for elementary learners and work as part of a collaborative classroom teaching team.

**Course Description:**
- **Teaching Content Literacy:** Lecture component. Emphasis on techniques for using reading and writing as tools for the acquisition of new content. Focuses on general literacy skills, prior knowledge of content, and understanding of instruction in secondary schools. Additional emphasis includes ESOL and ESL teaching theories and methods. Course is a field experience focusing on the application of theory and methods learned in EDSE 4780 and 4720.
- **Evaluation of Student Progress:** Lecture component. Focus on the knowledge and skills for using classroom assessment to evaluate student learning. Addresses strategies for using data effectively and promoting data-driven decision making and problem solving based on collected data.
- **Secondary School Science Methods:** Lecture component. Prepares candidates for teaching actual science classrooms in the community through the integration of service learning projects. Candidates are expected to design individual lessons and units that incorporate national and state standards, classroom management, student safety, learning theory, assessment, the nature of science, science in the community, and scientific literacy. Candidates are also expected to use accurate science content, inquiry skills, and practices through class activities and assignments. Service learning is a designated C course, students are required to participate in and reflect upon meaningful service commitments within the community. Travel to and from service learning sites is necessary and is organized collaboratively through the course. These service learning obligations require out of class time, however, all efforts are made to ensure that scheduling and service options are flexible and meet student professional needs and interests.
- **Secondary School Science Teaching Lab:** Laboratory component. Practicum in approved school settings enables students to teach science students, building from small-group instruction to extended teaching of entire classes. College students also participate in science fairs, contests, and olympiads.
- **Teaching Earth Science:** Lecture component. Addresses principles and practices for teaching earth science. Standards and model curricula are investigated and used to develop short- and long-term instructional plans for use with teachers and students in P-16.
- **Teaching Earth Science Lab:** Laboratory component. Course is a field experience focusing on the application of theory and methods learned in EDSE 4720.
- **Teaching Physical Science:** Lecture component. Course addresses principles and practices for teaching physical science. Standards and model curricula are investigated and used to develop short and long term instructional plans for use with teachers and students in P-16.
- **Teaching Physical Science Lab Field:** Laboratory component. Course is a field experience focusing on the application of theory and methods learned in EDSE 4780.
- **Introduction to Teaching Secondary Social Studies:** Lecture component. Course is designed to enable future social studies teachers to design, implement, evaluate, and reflect upon practices and processes for social studies education. Teacher candidates will explore the purpose and value of social studies, practice different methods and techniques of instruction, and gain valuable experience in curriculum development, unit planning, and assessment for classrooms and through service learning.

<td>Students learn about the foundations of research-based approaches to teaching mathematics to students in preschool through grade 12, with a focus on supporting students with disabilities. They experience learning mathematics through rich problems that encourage multiple strategies, analyze children's ways of solving similar problems, and develop lessons that align to current educational standards and research recommendations. Students are required to complete a 30 hour field experience.</td>

<tr>
<td>COURSE DESC:</td>
<td>This course integrates theory and clinical experiences by focusing on assessing and analyzing problems related to classroom learning environments; identifying and planning program enhancements and interventions using data-based decisions and progress monitoring; and implementing and evaluating the plan in clinical settings. The course explores issues and methods for assessing the academic, social/emotional/behavioral, and life skills of students receiving services and supports under IDEA. Students learn to interpret formal and informal learning environments and ecological assessments, create and apply accommodations and modifications of various assessments, and develop alternative and community-based assessments to support student learning and success.</td>

<td>COURSE DESC: This course focuses on the selection of current methods used in teaching students with high incidence disabilities. Students discuss instructional considerations to integrate effective teaching methods and eliminate potential learning barriers. This course presents specific techniques and practice activities on effective methods of instruction for learners with high incidence disabilities, focusing on Universal Design for Learning, backwards planning, scaffolding, and differentiation techniques. Students apply the various instructional and assistive technologies used in the field of special education to their lesson planning and classroom instruction.</td>

<td>COURSE DESC: This course is designed to give intervention specialists exposure to working with children who have disabilities that include significant medical issues and/or Complex Communication Needs (CCN). Students explore the continuum of Augmentative and Alternative Communication (AAC) as well as Assistive Technology (AT). This course also supports intervention specialists’ understanding of the medical information necessary to facilitate service delivery to learners receiving services and supports under IDEA, with a focus on symptoms of conditions, causes of disabilities, functional implications, and vocational aspects of disability. Students practice the use of integrated communication, health, and medical supports for individuals with various support needs.</td>

EDSP 4600 Field Experience in Special Education II
ELIGIBLE GRADES: GEC1: A-F, CCR
COURSE DESC: This field experience focuses on increasing responsibilities in the practical application of concepts and skills introduced in special education courses in prerequisite and current block. Teacher candidates (pre-service teachers) complete direct observations, planning, and teaching under the supervision of a cooperating teacher and university supervisor in settings with persons receiving services and supports under IDEA. This course is the second in a two-part early field experience where teacher candidates engage a variety of clinical experiences to expand their knowledge of serving students was a disabilities to prepare them for dual licensure. A minimum of 120 direct contact hours are required.

EDSP 4610 Field Experience in Special Education--Moderate to Intensive Educational Needs
ELIGIBLE GRADES: GEC4: A-F, CCR
COURSE DESC: Increasing responsibilities in the practical application of concepts and skills introduced in special education courses in prerequisite and current block; direct observations, planning, and teaching under the supervision of a cooperating teacher and university supervisor in settings with persons receiving services and supports under IDEA. This course is the second in a two-part early field experience where teacher candidates engage a variety of clinical experiences to expand their knowledge of serving students was a disabilities to prepare them for dual licensure. A minimum of 120 direct contact hours are required.

EDSP 4750 Methods for Learners with Moderate to Intensive Educational Needs
ELIGIBLE GRADES: GEC1: A-F, CCR
COURSE DESC: Design and application of multifactored/transdisciplinary assessment procedures, curricular adoption/development, IEP transition, technology planning, proficiency testing/alternatives, instructional strategies including age-appropriate, functional, and community reference skills; use of positive behavioral supports; educational, adaptive equipment, assistive devices, and instructional materials to promote self-determination. Methods applied through case-based instruction, hands-on participation, and cooperative teaching.

EDSP 4770 Curriculum, Collaboration, and Consultation
ELIGIBLE GRADES: GEC1: A-F, CCR
COURSE DESC: This course is a comprehensive overview of collaboration as both a concept and a skill. Students develop professional competencies related to collaboration, consultation, co-teaching, and teaming in special education. Students learn and apply skills in using evidence based practices and standards-based curriculum development to provide K-12 learners with disabilities access to the general education curriculum. Knowledge and skills also include the consultation process, co-planning and reflective teaching, universal design for learning (UDL), collaborating with professionals and parents, legal and ethical issues, and inter-agency and interdisciplinary collaboration.

EDSP 4850 Assessment and Evaluation Under IDEA
ELIGIBLE GRADES: GEC1: A-F, CCR
COURSE DESC: This course covers formal and informal methods of assessment, data collection, and appropriate application of assessment data utilizing laboratory and field experiences. Students develop and interpret assessment data in the development of a comprehensive Individualized Education Program (IEP). Students consider legal and ethical issues related to the assessment and evaluation of receiving services and supports under IDEA.

EDSP 4900 Special Topics in Education - Special
ELIGIBLE GRADES: GEC3: A-F, CR
COURSE DESC: Specific course content will vary with offering.

EDSP 5300 Teaching Mathematics for Diverse Learners
ELIGIBLE GRADES: GEC1: A-F, CR
COURSE DESC: Students learn about the foundations of research-based approaches to teaching mathematics to students in preschool through grade 12, with a focus on supporting students with disabilities. They experience learning mathematics through rich problems that encourage multiple strategies, analyze children's ways of solving similar problems, and develop lessons that align to current educational standards and research recommendations.

EDSP 5700 Services and Supports under IDEA
ELIGIBLE GRADES: GEC4: A-F, CR, PR
COURSE DESC: This course provides an in-depth overview to the field of special education, presenting basic knowledge and understanding of the historical and legal aspects, nature and needs of persons with support needs across the life-span, attitudes and expectations essential to working with children who receive services and supports under IDEA, delivery of services appropriate to meeting their needs, and current trends and issues with an emphasis on inclusive education in limited resource environments. It also offers elements of UDL to delivery of competencies through the infusion of self-selected activities in meeting specific candidate learning needs.

### ELIGIBLE GRADES: GEC1: A-F

### REQUISITE: EDSP 5700

### COURSE DESC:

**Comprehensive overview and development of professional competencies related to research/evidence based practice, standards-based curriculum development, access to the general education curriculum, collaboration, consultation and co-teaching in special education. Content includes the selection and use of research/evidence based practices, collaboration and consultation processes, curriculum development/co-planning (developing unit of study), universal design for learning (UDL), adaptations and modifications of curricula and instruction to meet learner needs, communicating with professionals and parents, working in teams, legal and ethical issues, interagency and interdisciplinary collaboration, and collaborating with families of students with special needs. The course is designed for candidates in the mild/moderate (GC), moderate-intensive and (IC) and early childhood (EC) intervention specialist areas.**

**Eligible Grades:** GEC1: A-F  
**Course Desc:** This course provides an understanding of the theoretical foundations of reading and reading instruction. Topics of instruction include: historical perspectives of the field; theories of reading and reading instruction; research in reading and reading instruction; and the relationships between oral language, writing, diversity and learning to read. Emphasis is on how these factors impact the decisions teachers make when planning, preparing, organizing and teaching literacy in the classroom.

| EHS TEDU | EDTE | 5210 | Foundation of Language and Diversity | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** In-depth study of how diversity (English language learners (ELLs), students of different cultural and ethnic backgrounds, and students with learning problems) effects the development of reading. Covers a comprehensive review of the research literature in these areas as well as an examination of suggested strategies for teaching students of diversity and how these strategies align with the research. Field work during which candidates observe and teach students from among these categories is a part of this course.

| EHS TEDU | EDTE | 5220 | Assessing and Teaching Struggling Readers | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** This course focuses on an initial introduction to in-depth assessment and evaluation of students' reading ability with the intent of preparing programs of instruction designed to improve reading weaknesses. Candidates learn and administer a number of different assessments and plan instruction according to determined student needs. Emphasis is placed on working with a single student who has been identified as reading below grade level. Candidates write a final case report of one student's reading strengths and needs.

| EHS TEDU | EDTE | 5221 | Diagnosis: Reading/Language Arts | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC1: A-F  
**Course Desc:** This course focuses on the examination and practice of a variety of assessments suitable for the evaluation of students' reading performance. Candidates assess, tutor, and prepare a case report for a student from grades P-3 or 4-6 for a minimum of 35 hours. Course topics include: investigating the purposes of and determining appropriate use of reading assessments; determining reliability/validity; selecting/developing appropriate assessments; administering/interpreting assessments and planning appropriate instruction; collaborating with reading professionals for instruction and intervention; and communicating assessment results to appropriate audiences.

| EHS TEDU | EDTE | 5230 | Reading/Language: Laboratory | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** This course extends students' knowledge and skills related to helping children become successful readers and writers. Students perform diagnostic examinations, prepare lesson plans, and individually tutor a struggling reader. Through their work, students monitor the progress of their struggling reader, identifying instructional objectives based on diagnostic examinations and implementing specific strategies to remediate difficulties. The work in this course culminates in the creation of a final remediation report, including documentation and comparisons of assessment results as well as a full description of several activities used to meet each instructional objective. For this class, students are required to work with a student in grades K-3 or 4-6 for a total of 35 hours.

| EHS TEDU | EDTE | 5240 | Literature for Children and Adolescents | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** This course builds on the foundational knowledge acquired in undergraduate children's literature courses to focus on diversity in literature for P-12 students. Understanding the components of children's literature (e.g., genre, voice, character development), students in this course critically evaluate their knowledge and use of diverse literature with P-12 students. Students learn more about the diversity that does (and does not) exist in literature for young students, and read and evaluate literature that brings attention to diversity of race, ethnicity, religion, gender identity, sexual identity, socioeconomic status, familial status, ability, and mental health.

| EHS TEDU | EDTE | 5250 | Reading Instruction | Lecture | 3 | 0 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** Focuses on core and remedial reading instruction.

| EHS TEDU | EDTE | 5260 | Teaching Literacy in the Content Areas | Lecture | 3 | 6 | N | G50 | 0 |  |

**Eligible Grades:** GEC4: A-F  
**Course Desc:** Strategies for using various content-area appropriate literacy materials across K-12 classrooms are presented in this course. Diagnosis of the readability of texts and the adaptation of materials and teaching for content area instruction is also presented. A focus of this course is on meeting the literacy needs of all students, especially diverse learners, across all content areas.

**EHS TEDU EDTE 5261 Secondary Reading Instruction**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

This course focuses on materials, methods, and techniques of secondary reading instruction for teaching adolescent learners of various abilities. Emphasis is placed on diagnosis of reading difficulties and adaptation of materials and teaching methods for content area instruction. Candidates are required to complete 35 hours of field work with a student in grades 7-12 as part of this course. This course is reserved for candidates in the Master's of Reading Education and Reading Endorsement programs only.

**EHS TEDU EDTE 5270 Phonics and the Structure of Language**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

This course provides information and training in the foundations of phonics instruction. In this course, candidates explore the historical, linguistic, and instructional framework related to phonics skill development and learn how to adjust instruction for the needs of all learners.

**EHS TEDU EDTE 5300 Teaching Middle Childhood Mathematics**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

Students extend their understanding of research-based approaches to teaching middle grades mathematics and put these approaches into practice. This course includes a field placement in a grades 4-9 classroom, which is arranged by the College of Education. Students plan and enact mathematics lessons in their field placement and reflect on their teaching. There is a strong emphasis on identifying and building on children’s home, community, and mathematical strengths and on understanding the relationship between mathematics, children’s lives, and real-world issues.

**EHS TEDU EDTE 5400 New Programs and Practices in Science**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

This course is designed to prepare middle childhood education teacher candidates with the knowledge, skills, and dispositions that provide the foundation for effective science teaching. It develops teacher candidates’ abilities to design inclusive, safe, and culturally responsive learning environments based on current perspectives about student learning and using evidence-based strategies for teaching and assessment. It also emphasizes scientific inquiry, core ideas, and cross-cutting concepts as recommended by the Ohio Learning Standards for Science and the Next Generation Science Standards. Additional emphasis is placed on the analysis of current trends and research in the field of middle grades science education.

**EHS TEDU EDTE 5410 New Topics in Science and Science Education**

**Component**: Lecture

**Cred Hours**: 1 to 3

**Repeat**: 6

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

Modern advances in science and current science education topics to determine suitable content, apparatus, and grade level placement for presentation in schools. Development and use of curriculum guides, curriculum models, modern units, outdoor education, science fairs, field trips, programmed materials, uses of technology, and similar methods of advancing science education.

**EHS TEDU EDTE 5420 Seminar in Science Education**

**Component**: Seminar

**Cred Hours**: 1 to 3

**Repeat**: 6

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

Provides elementary and secondary school teachers with a variety of techniques that enable them to integrate new concepts of science education into their teaching, such as environmental education, population education, energy conservation, world hunger, food problems, outdoor biology, etc.

**EHS TEDU EDTE 5510 Teaching Middle Childhood Social Studies**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

The foundation of social studies is to help students develop new understandings of the world through discourse and activities that emphasize applications to authentic issues of human society. Problem solving, critical thinking and analysis, negotiation and collaboration are part of the teaching of social studies content. Using national and state standards, course emphasizes integrated social studies for curriculum organization in grades 4-9.

**EHS TEDU EDTE 5510L Teaching Middle Childhood Social Studies - Lab**

**Component**: Laboratory

**Cred Hours**: 1

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

Companion lab course for EDTE 5510.

**EHS TEDU EDTE 5600 Advanced Studies of Children and Adolescents**

**Component**: Lecture

**Cred Hours**: 3

**Repeat**: 0

**General Education**: N

**Perm**: G50

**Subsidy Level**: 0

**eLearn Options**: 

**Majors Set Aside**: 

Intensive study of research in child development from conception to maturity and implications for educational practices.

GEC4: A-F, CR, PR  
**REQUISITE:**
EDTE 7210  
**COURSE DESC:**
Independent study with topic restricted to some aspect/level of language arts instruction.

| EHS     | TEDU | EDTE | 8310  | Practicum in Mathematics | Laboratory | 1 to 3 | 3 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Practicum in teaching math prior to the professional internship.

| EHS     | TEDU | EDTE | 8500  | Seminar in Social Studies Curriculum | Seminar | 3 | 0 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC2: A-F, CR, PR  
**COURSE DESC:**
Focuses on the foundations of social studies education. It includes an analysis of various schools of thought in the social studies, past and present, as well as school systems and delivery of the social studies curriculum.

| EHS     | TEDU | EDTE | 8510  | Seminar in Social Studies Research | Seminar | 3 | 0 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC2: A-F, CR, PR  
**COURSE DESC:**
Review of the social studies research literature. It includes a focus on current research topics featured in the field's major scholarly journals as well other significant research publications.

| EHS     | TEDU | EDTE | 8520  | Seminar in Social Studies Education Research | Seminar | 3 | 0 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Identification of reasonable problems that can be researched in social studies and development of appropriate research design.

| EHS     | TEDU | EDTE | 8700  | Legal Issues in Special Education | Seminar | 3 | 0 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Provides an in-depth and critical study of the historical evolution of legal issues in disabilities with attention to its constantly changing impact on policy and service systems for people with disabilities. Particular emphasis is placed on special education law as it applies to public schooling in limited resource environments.

| EHS     | TEDU | EDTE | 8720  | Critical Issues and Current Trends in Special Education | Seminar | 3 | 0 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Examination of the most salient issues and questions facing the field of special education. Divergent perspectives regarding these challenges that currently confront the profession will be analyzed and evaluated, investigated, and collectively discussed along with trends that are profoundly altering both the manner in which special education teachers and administrators are professionally prepared, as well as the means by which children with diverse learning needs are delivered instruction in public school settings, with particular attention being given to the special challenges facing special educators and administrators in the delivery of quality services within limited resource environments.

| EHS     | TEDU | EDTE | 8740  | Applied Research in Disabilities | Seminar | 3 | 0 | I | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Designed to provide an overview of applied research in disabilities and Special Education. Research will be grouped and analyzed according to the type of methodology employed, including literature reviews, experimental and quasi-experimental designs, single-subject designs, applied quantitative research, qualitative research, and meta-analysis. Specific studies/papers in each area are analyzed and critiqued, with an emphasis on identifying best practices in applied research. Complete a research proposal as a final product attending to the Special Education Program's focus which centers on the delivery of quality services within limited resource environments.

| EHS     | TEDU | EDTE | 8900  | Special Topics in Education - Teacher | Lecture | 1 to 15 | 999 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Specific course content will vary with offering.

| EHS     | TEDU | EDTE | 8912  | Research and Curriculum: Language and Literacy | Internship | 3 to 10 | 10 | N | G50 | 0 |

**ELIGIBLE GRADES:**
GEC4: A-F, CR, PR  
**COURSE DESC:**
Supervised field experiences in reading.

**ELIGIBLE GRADES:** GEC1: A-F  **REQUISITE:** AVN 4850

**COURSE DESC:** Corporate pilot standards and practices with in-depth review of safety, standardization, and CRM concepts as applied to corporate flight operations. Will also cover aircraft systems, preflight, performance calculations, weight and balance, and emergency procedures in various piston and turbo-prop aircraft.

**COURSE DESC:**
- **Strength of Materials II:** Unsymmetrical bending, shear centers, columns, energy, and continuation of basic topics usually taught in Strength of Materials I.

- **Experimental Methods in Civil Engineering:** Application and theory of electronic sensors to civil engineering measurements including strain gages, load cells, displacement transducers, accelerometers, and temperature measurements. Analysis of errors in measured data. Emphasis will be also placed on the preparation of laboratory reports and a project report. 3 lec.

- **Experimental Methods in Civil Engineering:** Application and theory of electronic sensors to civil engineering measurements including strain gages, load cells, displacement transducers, accelerometers, and temperature measurements. Analysis of errors in measured data. Emphasis will be also placed on the preparation of laboratory reports and a project report. 3 lec.

- **Structural Design in Concrete:** Materials and properties; design methods, strength of rectangular sections subject to bending moments, axial loads, and shear forces either separately or in combination; continuity in concrete construction; design of one-way slabs; design of T sections in bending; deflection calculations, and footing design.

- **Structural Design in Steel:** Materials and properties; design methods, design of tension members; structural fasteners; design of compression members, beams, trusses, and frames.

- **Timber Design:** Material properties and behavior of structural timber. Analysis and design of sawed timber and laminated timber members. Timber construction analysis and design.

- **Masonry Structural Design:** This is a civil engineering course related to masonry construction. The course covers a list of topics ranging from materials used in masonry construction to design standards and actual design steps. The course allows students to work on a project in which they design, build, and test a masonry structural element.

- **Prestressed Concrete Design:** Theory of prestressing. Design and analysis of prestressed concrete beams, slabs, box girders, and bridge girders by elastic and ultimate strength methods.

- **Flow Routing:** Gradually varied flow computation, the use of computer software programs for flow routing, and their engineering applications.

- **Water & Wastewater Engineering:** Sources and collection of public water supplies; principles of water treatment processes; quantities and collection of municipal wastewater; principles of wastewater treatment processes.

- **In-Situ Remediation:** Students will learn about the regulatory aspects of site remediation work, chemical & physical behavior of common groundwater and soil pollutants, different (chemical, biological, physical) mechanisms for remediation, and a survey of the proper use of various remediation techniques. Students will perform preliminary designs using several remediation methods.

- **Solid & Hazardous Waste Management:** Identification, classification, and study of methods of characterization, handling, treating, managing, and disposal of solid/hazardous wastes regulated under federal and state guidelines and legislation, site remediation, green chemistry.

- **Sustainable Construction:** Investigations into green building construction practices and sustainability including use of novel or recycled materials, energy management and efficiency, water use/re-use, and indoor air quality.

- **Water Resources Engineering:** A civil engineering course designed to provide integrated treatment of water resources engineering, including hydrological measurements, runoff, groundwater, water law, reservoir design, frequency analysis, planning, flood control. Systems approach to multipurpose water resource projects emphasized.

- **Water Quality Engineering:** Natural and man-made characteristics of water quality, changes in quality resulting from use, criteria for control of stream pollution, methods of improving water quality, also legal, economic, and institutional aspects lab methods and interpretation of results for chemical and bacteriological examination of water and wastewater.

<td>This class covers the fundamental concepts, principles of structural modeling, and computer-aided structural design. In this class, each student gains many hours of practical modeling experience using a powerful finite element package widely used by structural engineers. The class first starts with modeling of the common structural components under a variety of loading conditions. Then, the class addresses issues such as how to interpret the model analysis results and how to make design choices. Experiences gained with the software package used should transfer easily to any other structural analysis software package.</td>

ELIGIBLE GRADES: Designed for students who want or need to do an internship as part of the MS BME program.

ELIGIBLE GRADES: Individual, non-thesis research related to biomedical engineering, arranged with a specific professor.

ELIGIBLE GRADES: ELIGIBLE GRADES: ELIGIBLE GRADES: ELIGIBLE GRADES: ELIGIBLE GRADES: ELIGIBLE GRADES:
### CHE 3400: Chemical Engineering Fluid Mechanics
- **Component:** Recitation
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Fundamental principles of fluid flow. Transportation and metering of fluids. Navier-Stokes equations and equation of continuity. Laminar and turbulent flow and fluids in conduits and past immersed bodies. One lab project is included.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3200 and MATH 3400 and C or better in CHE 2010

### CHE 3500: Chemical Engineering Heat Transfer
- **Component:** Lecture
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
A study of the fundamental principles of heat transfer with applications. Conduction, convection and radiation heat transfer and heat exchanger design will be covered.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3200 and MATH 3400 and C or better in CHE 2010

### CHE 3500: Chemical Engineering Heat Transfer
- **Component:** Recitation
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
A study of the fundamental principles of heat transfer with applications. Conduction, convection and radiation heat transfer and heat exchanger design will be covered.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3200 and MATH 3400 and C or better in CHE 2010

### CHE 3600: Chemical Engineering Mass Transfer and Separations
- **Component:** Lecture
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Fundamental principles of mass transfer. Diffusivities, mass transfer coefficients, stage-wise and continuous-contact unit operations. Specifically absorption, distillation, and extraction will be covered.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3210 and 3500

### CHE 3700: Chemical Reaction Engineering
- **Component:** Lecture
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Application of chemical kinetics and material and energy balances to the design of chemical reaction systems.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3210 and 3500

### CHE 3800: Chemical Engineering Modeling and Applied Calculations
- **Component:** Lecture
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Modeling of typical chemical engineering problems and application of analytical and numerical methods to their solution.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3210 and 3400 and 3500 and MATH 3200

### CHE 4000: Chemical Engineering Professional and Ethical Issues
- **Component:** Lecture
- **Cred Hours:** 1
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Readings and discussion of professional and ethical responsibility, the impact of engineering solutions in a global and societal context, the need for lifelong learning, and knowledge of contemporary issues.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 3600

### CHE 4110: Unit Operations Lab I
- **Component:** Laboratory
- **Cred Hours:** 1
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Application of engineering analysis and statistics to the design of experiments with particular emphasis on continuous processes as typically encountered in chemical engineering field. Lab practice to illustrate principles of selected unit operations, thermodynamics, and applied kinetics; and to aid student in gaining confidence in handling of chemical engineering equipment. Development of ability to devise and conduct chemical engineering experiments. Emphasis is placed on effective technical writing. This course is designated as a Foundations - Advanced Writing course.

**Eligible Grades:**
GEC: A-F

**Requisite:**
CHE 2010, 3600, 3700, & 3800

### CHE 4110: Unit Operations Lab I
- **Component:** Lecture
- **Cred Hours:** 3
- **General Education:** N
- **Subsidy Level:** 0

**Course Description:**
Application of engineering analysis and statistics to the design of experiments with particular emphasis on continuous processes as typically encountered in chemical engineering field. **Course Descriptions**

- **CHE 4120 Unit Operations Lab II**: Continuation of CHE 4110. Lab practice to illustrate principles of selected unit operations, thermodynamics, and applied kinetics; and to aid student in gaining confidence in handling chemical engineering equipment. Development of ability to devise and conduct chemical engineering experiments with minimum supervision and to report results satisfactorily will be stressed.

- **CHE 4200 Chemical Process Control**: Control of chemical manufacturing processes. Steady state and dynamic characteristics of chemical processes, measurement devices and control elements, and control systems. Design, analysis, simulation, and optimization of chemical process control systems.

- **CHE 4300 Chemical Engineering Process Design I**: Study and practice of the steps required for preliminary design of chemical processes. Process synthesis, computer flowsheeting, layout, economics and process safety are presented. Application of skills from previous required courses is utilized. Particular emphasis on Hazard and operability analysis of chemical processes and the subsequent safe operation criteria.

- **CHE 4310 Chemical Engineering Process Design II**: Study and practice of the steps required for preliminary design of chemical processes. Process synthesis, computer flowsheeting, layout, safety, and economics. Design of a full-scale chemical process is completed, encompassing technical feasibility, economics, safety and community impact.

- **CHE 4400 Advanced Topics in Materials Science and Engineering**: Structure, processing, and applications of ceramics, polymers, and composites. Corrosion and degradation of materials. Electrical, thermal, optical, and magnetic properties of materials. Materials selection and design.

- **CHE 4410L Materials Characterization Laboratory**: Laboratory course for the study of microstructure and properties of steels. Hands-on experience in metallography, microscopy, heat treatment, hardness and tensile testing. Demonstration of impact test, hardenability test (Jominy bar), scanning electron microscopy and surface profilometer.

- **CHE 4420 Metal Corrosion**: The primary objective is to cover the fundamental aspects of metallic corrosion and its' mitigation. Basic principles of corrosion including electrochemical foundation, influence of environment, stress, strain, and structure. Selected lab experiments.

- **CHE 4430 Polymer Synthesis & Properties**: In depth study of polymer structure, reaction mechanics, and reaction kinetics. Presentation of polymer reactors, processing, and properties.

- **CHE 4500 Coal Conversion Technologies**: Introduction to coal conversion technologies. Coal classification and characterization. Description of coal chemistries and technologies including: combustion, gasification, Fischer-Tropsch synthesis, indirect and direct liquefaction. Environmental impacts and environmental controls related to coal conversion technologies will be explored.

- **CHE 4520 Analysis of Electrochemical Systems**: Application of thermodynamics, transport phenomena, and reaction engineering to the design and understanding of electrochemical processes. Emphasis will be made in important industrial electrochemical processes such as electrolysis, batteries, and fuel cells.

<td>This course is designed to introduce the students to particle suspensions and biological interfaces, in which the boundaries play an important role in the physical and chemical properties of the system. As the materials become smaller, more of their total mass becomes part of the interface, thus an understanding of interfacial properties is important in working with suspensions containing small or nano-sized particles. This course provides an understanding of the fundamentals of interfacial behavior in nanoparticle systems and in biological interfaces, with an emphasis on applications.</td>

<td>The purpose is to expose students to concepts underlying a variety of techniques used in the broad field of immunology. Lectures will present the fundamentals of current immunological techniques, with particular emphasis in the antibody: antigen interaction. The advantages and disadvantages of different methodologies will be discussed. Students will be asked to design protocols and to read specific scientific papers that highlight the relevance of various immunological techniques.</td>

**ENT CHE**

**CHE 5015D**

**Title:** Chemical Engineering Modeling and Applied Calculations  
**Component:** Recitation  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Modeling of typical chemical engineering problems and application of analytical and numerical methods to their solution.

**ENT CHE**

**CHE 5016D**

**Title:** Unit Operations Lab I  
**Component:** Laboratory  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Application of engineering analysis and statistics to the design of experiments with particular emphasis on continuous processes as typically encountered in the chemical engineering field. Lab practice to illustrate principles of selected unit operations, thermodynamics, and applied kinetics; and to aid student in gaining confidence in handling of chemical engineering equipment. Development of ability to devise and conduct chemical engineering experiments. Emphasis is placed on effective technical writing. This course is designated as a Foundations - Advanced Writing course.

**ENT CHE**

**CHE 5018D**

**Title:** Process Control and Simulation  
**Component:** Lecture  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Simulation and control of chemical processes. Feedback control using root loci and Bode diagrams covered.

**ENT CHE**

**CHE 5019D**

**Title:** Chemical Engineering Process Design I  
**Component:** Lecture  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Study and practice of the steps required for preliminary design of chemical processes. Process synthesis, computer flowsheeting, layout, economics and process safety are presented. Application of skills from previous required courses is utilized. Particular emphasis on Hazard and operability analysis of chemical processes and the subsequent safe operation criteria. The year-long senior design project is started.

**ENT CHE**

**CHE 5020D**

**Title:** Chemical Engineering Process Design II  
**Component:** Lecture  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Continuation of 4300. Preliminary design of a chemical process. Process synthesis, computer flowsheeting, layout, safety, and economics. Design of a full-scale chemical process is completed, encompassing technical feasibility, economics, safety and community impact.

**ENT CHE**

**CHE 517D**

**Title:** Unit Operations Lab II  
**Component:** Laboratory  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Continuation of Che 4110. Lab practice to illustrate principles of selected unit operations, thermodynamics, and applied kinetics; and to aid student in gaining confidence in handling of chemical engineering equipment. Development of ability to devise and conduct chemical engineering experiments. Emphasis is placed on effective technical writing. This course is designated as a Foundations - Advanced Writing course.

**ENT CHE**

**CHE 519L**

**Title:** Materials Characterization Laboratory  
**Component:** Laboratory  
**Cred Hours:** 3  
**Repeat Hours:** 0  
**Permutation:** N  
**General Education:** G50  
**Subsidy Level:** 0  
**ELIGIBLE GRADES:** A-F  
**REQUISITE:**  
**COURSE DESC:** Laboratory course for the study of microstructure and properties of steels. Hands-on experience in metallography, microscopy, heat treatment, hardness and tensile testing. Demonstration of impact test, hardenability test (Jominy bar), scanning electron microscopy and surface profilometry.

**Course Descriptions**

- **Fundamentals of Computing**: This course covers fundamental concepts in computing. These concepts include computational thinking and problem solving, algorithms, data analysis, and computer programming. This course prepares students without prior computer programming experience for CS 2400, Introduction to Computer Science I.

- **Computer Programming in JAVA**: Intended as a stand-alone class for students who want to learn about computer programming for their use in various fields. Basic programming and program structure. Primitive data types. Structured programming and control structures. Object oriented programming and classes. Command line and graphical user interfaces. Computer solution to a variety of problems using the Java programming language.

- **Introduction to Computer Science I**: Introduce to computer science, the discipline of computing, and the programming language C++. Topics include elementary C++, computer algorithms, flow of control, procedural abstraction, functions, streams, arrays, strings, objects and classes, polymorphism and operator overloading.

- **Introduction to Computer Science II**: Continuation of C S 2400 with emphasis on design of software and more advanced features of the object oriented programming language C++. Topics include design of software using UML, generic programming (templates), linked lists, stacks, queues, container classes and iterators, inheritance, derived classes, virtual functions, tree data structures, and recursion.

- **Professional and Ethical Aspects of Computing**: Examines the professional, ethical, and legal issues that are likely to be encountered by computing professionals, both locally and globally. Topics include privacy, information security issues, freedom of speech, intellectual property, software licensing, regulations pertaining to computing professionals, copyright, and broader issues on the impact of computers on society. Covers professional ethics and responsibilities as well as general theories of normative ethics.

- **Special Topics in Computer Science**: Specific course content will vary with offering.

- **Computer Science Tutorial**: First-year tutorial studies in computer science for HTC students only.

- **Second-year tutorial studies in computer science for HTC students only**.

**COURSE DESC:** Provides introduction to distributed, parallel, and web-centric computing, along with enabling technologies (e.g., networking). Introduces distributed and parallel models of computation, distributed and parallel computer architectures, multi-core designs, potential speed-up, threading, synchronization, and multi-core programming, parallel and distributed algorithms, sockets and client-server based software, web programming, accessing databases across the web, and web-security.

<td>A course on formal languages theory and compilers. Topics may include, but are not limited to: regular expressions; finite automatata; context-free grammars; predictive parsing; LR parsing; abstract syntax; type systems and type-checking; stack layout and activation records; intermediate representations; control-flow graphs; static-single assignment (SSA) form; dataflow/loopiness analysis; register allocation; garbage collection/runtimes; the LLVM compiler infrastructure. Over the course of the semester, students will implement a compiler for a small imperative programming language, targeting an intermediate representation such as LLVM. This course involves a significant amount of programming.</td>

**COURSE DESC:** Focuses on bioinformatics tools and biological databases; utilizing them to solve problems designed from current issues in biological, biotechnological, and biomedical research.

**COURSE DESC:** Studies different parallel structures to familiarize students with variety of approaches to parallel computing and the strengths and weaknesses of each approach. Concentrates on understanding methods for developing parallel algorithms and analyzing their performance. Advantages and disadvantages of different methods for mapping algorithms onto several different parallel architecture studied. Algorithms discussed include sorting, searching, matrix operations, and others.

**COURSE DESC:** Special project in one of various subfields of computer science or application area studied, investigated, and/or solved by individual student or small group working in close relationship with instructor. Suitable problems might include construction of compiler for a special purpose language, perfection of software to solve some significant problem, or the study of coherent subfield of computer science. May be repeated for credit.

**COURSE DESC:** Discrete mathematics and its application to computer science explored. Foundational mathematical techniques used in computer science are explored in depth: propositional logic, number theory and proofs, sequences and mathematical induction, set theory, counting and combinatorics, discrete probability, functions, recursion, simple analysis of algorithms, and orderings and relations. Applications of these structures to various areas of computer science also covered.

**COURSE DESC:** Discrete mathematics and its application to computer science explored. Foundational mathematical techniques used in computer science are explored in depth: propositional logic, number theory and proofs, sequences and mathematical induction, set theory, counting and combinatorics, discrete probability, functions, recursion, simple analysis of algorithms, and orderings and relations. Applications of these structures to various areas of computer science also covered.

**COURSE DESC:** Introduces modern study of computer algorithms. Topics include correctness of algorithms, analysis of iterative and recursive algorithms, worst-case, best-case, average-case, and amortized behavior, design of algorithms, divide and conquer algorithms, the greedy method, graph searching, and dynamic programming techniques. Selected additional topics may include computational geometry or NP-completeness.

**COURSE DESC:** Explores fundamentals concerning formal language theory and the theory of computation. Topics include basic models of computation, the Church-Turing thesis, Turing machines, decidability and undecidability, computational complexity, NP-completeness, and diagonalization.

**COURSE DESC:** A course on formal languages theory and compilers. Topics may include, but are not limited to: regular expressions; finite automata; context-free grammars; predictive parsing; LR parsing; abstract syntax; type systems and type-checking; stack layout and activation records; intermediate representations; control-flow graphs; static-single assignment (SSA) form; dataflow/liveness analysis; register allocation; garbage collection/runtimes; the LLVM compiler infrastructure. Over the course of the semester, students will implement a compiler for a small imperative programming language, targeting an intermediate representation such as LLVM. This course involves a significant amount of programming.

**COURSE DESC:** Studies different parallel structures to familiarize students with variety of approaches to parallel computing and the strengths and weaknesses of each approach. Concentrates on understanding methods for developing parallel algorithms and analyzing their performance. Advantages and disadvantages of different methods for mapping algorithms onto several different parallel architecture studied. Algorithms discussed include sorting, searching, matrix operations, and others.

**COURSE DESC:** Focuses on bioinformatics tools and biological databases; utilizing them to solve problems designed from current issues in biological, biotechnological, and biomedical research.

Data Structures
COURSE DESC: Complexity of computational problems explored with respect to a variety of complexity measures. Topics include analysis of algorithms, dynamic arrays, tree structures, heaps, balanced trees, dictionaries, graphs and graph algorithms, and the complexity of sorting. Graph algorithms for depth first and breadth first search, shortest path, minimum cost spanning trees, and others are covered. Coverage of built in data structures and algorithms in modern programming languages included.

Database Systems
COURSE DESC: Topics in the theory of parallel computation are explored. Topics include the PRAM model, the Boolean circuit model, uniform circuit families, parallel complexity classes, reducibility, P-, NP- and co-NP-completeness, and the approximation of P-complete problems.

Database Systems
COURSE DESC: Advanced topics in the design and analysis of algorithms are explored. These topics include matching and network flow algorithms, randomized algorithms, and parallel algorithms, the theory of NP-completeness, NP-hard optimization problems, polynomial-time approximation algorithms, approximation schemes, approximability and non-approximability results.

Database Systems
COURSE DESC: Various data structures, algorithms associated with data structures, and analysis of algorithms are explored. Topics include analysis of algorithms, dynamic arrays, tree structures, heaps, balanced trees, dictionaries, graphs and graph algorithms, and the complexity of sorting. Graph algorithms for depth first and breadth first search, shortest path, minimum cost spanning trees, and others are covered. Coverage of built in data structures and algorithms in modern programming languages included.

Database Systems
COURSE DESC: Understanding internet protocols; network cabling, hubs, and switches; configuring network routers; configuring Unix and Windows workstations; measuring and analyzing network performance; and troubleshooting.

Database Systems
COURSE DESC: Understanding internet protocols; network cabling, hubs, and switches; configuring network routers; configuring Unix and Windows workstations; measuring and analyzing network performance; and troubleshooting.

Database Systems
COURSE DESC: This course is intended to serve as an elective for upper-level undergraduate students in computer science and electrical engineering, and for graduate students in computer science, and electrical engineering. It covers selected up-to-date topics in computer security, including defining threats to computer and network systems, evaluating the relative risks of these threats, and the development of cost-effective countermeasures.

Database Systems
COURSE DESC: This course covers the fundamental underpinnings of Artificial Intelligence (AI), including knowledge representation and search. It introduces AI applications and the AI programming languages, LISP and Prolog. Potential societal benefits and detriments of AI technology are discussed.

Database Systems
COURSE DESC: The course discusses basic principles that appear repeatedly as themes, including those related to authentication and access control, particularly in the context of operating systems and other computing applications. Different approaches to meeting computer security requirements, as well as increasingly important security standards are covered. This course has a special focus on low-level fundamentals of the Security Discipline such as the mathematical basis for Cryptography. This is accompanied by a series of real-world applications and hands on programming assignments.

Database Systems
COURSE DESC: This course covers classification, regression and clustering algorithms, as well as introductory concepts in reinforcement learning. Topics include perceptrons, logistic regression, linear regression, Naive Bayes, nearest neighbors, Support Vector Machines, and Q-learning. The description of the formal properties of the algorithms are supplemented with motivating applications in a wide range of areas including natural language processing, computer vision, bioinformatics, and music analysis.

Database Systems
COURSE DESC: Special project in one of various subfields of computer science or application area studied, investigated, and/or solved by individual student or small group working in close relationship with instructor. Suitable problems might include construction of compiler for a special purpose language, perfection of software to solve some significant problem, or the study of coherent subfield of computer science. May be repeated for credit.

Database Systems
COURSE DESC: Advanced topics in the design and analysis of algorithms are explored. These topics include matching and network flow algorithms, randomized algorithms, and parallel algorithms, the theory of NP-completeness, NP-hard optimization problems, polynomial-time approximation algorithms, approximation schemes, approximability and non-approximability results.

Database Systems
COURSE DESC: Topics in the theory of parallel computation are explored. Topics include the PRAM model, the Boolean circuit model, uniform circuit families, parallel complexity classes, reducibility, P-completeness, and the approximation of P-complete problems.

Database Systems
COURSE DESC: Complexity of computational problems explored with respect to a variety of complexity measures. Topics include deterministic time complexity, nondeterministic time complexity, the polynomial-time hierarchy, average-case time complexity, space-bounded complexity, circuit complexity, reductions, relativizations, and parallel models of computation.
### Real Time Systems
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Discusses real-time systems and their design principles. Studies the particular characteristics of these systems and some real-time programming technologies.

### Computational Genomics
**Component:** Seminar
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Prepares students to perform research in the field of bioinformatics. Reviews computer science research literature that pertains to bioinformatics to assist in the discovery of important unsolved bioinformatics problems that require basic research in computer science. Examines the research processes that are used in the field of bioinformatics. Writing-intensive course, requiring learning how to write, evaluate and review scholarly articles.

### Computer Graphics and Visualization
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Comprehensive study of the principles of computer graphics and visualization. Course topics include geometric transformations, representing shape, lighting properties, data representation, and visualization algorithms. Projects involve designing programs to visualize complex data in 2,3 and higher dimensions.

### Artificial Intelligence in Medicine
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Artifical intelligence (AI) approaches for medical decision making and clinical support, including knowledge-based systems, Bayesian reasoning, and data mining. Medical applications of AI, including diagnosis, therapy selection, patient monitoring and patient education.

### Advanced Topics in Computer Networking
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** High-speed networking, experimental protocols, congestion control, reliability, security, distributed systems.

### Software Specification
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** How software specifications are expressed and used. Emphasis on formal specifications and use of formal specifications in software verification and validation. Important formal specification models, including algebraic and axiomatic models, state/transition-based models, and temporal logic models, along with their related analysis techniques explored.

### Software Design
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Advanced object oriented modeling studied. Teaches how to employ the Unified Modeling Language (UML) for advanced structural modeling, advanced behavioral modeling, and architectural modeling of software systems. Advanced structural modeling involves software components and their relationships. Concepts taught in advanced behavioral modeling pertain to hierarchical representations of external environment dependencies and interactions as well as concurrency. Also covers architectural modeling, including design patterns, collaborations, and deployment diagrams.

### Software Implementation
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Provides the skills necessary for successful management of software engineering projects. Examines technical management techniques as well as interpersonal communication concepts. Principles taught applied to a software engineering program.

### Advanced Topics in Artificial Intelligence
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Advanced topics in artificial intelligence (AI) studied. Concepts of heuristic search and knowledge representation studied in detail to provide a firm grounding in AI. Then an advanced topic studied, such as machine learning, natural language understanding, computer vision, and/or reasoning under uncertainty. Emphasis is to illustrate that representation and search are fundamental issues in all aspects of artificial intelligence.

### Artificial Intelligence: Case-Based Reasoning
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Case-based reasoning (CBR) is an artificial intelligence (AI) paradigm, in which new problems are solved by reusing the solutions to previously encountered problems. Enables students familiar with AI problem solving techniques to explore CBR in depth. Featured will be: overview of fundamentals; discussion of research projects; CBR system implementation; and student presentations.

### Machine Learning
**Component:** Lecture
**Cred Hours:** 3
**Repeat Hours:** 0
**General Education:** N
**Perm:** G40
**Subsidy Level:** 0

**ELIGIBLE GRADES:**
**REQUISITE:**

**COURSE DESC:** Machine Learning is concerned with the design and analysis of algorithms that enable computers to automatically find patterns in the data. This introductory course will give an overview of the main concepts, techniques and algorithms that are relevant for the theory and practice of machine learning. The course will cover the fundamental topics of classification, regression and clustering, starting with simple learning models such as perceptrons, decision trees and logistic regression, and ending with more advanced models including Support Vector Machines, Conditional Random Fields and Bayesian networks. The description of the formal properties of the algorithms will be supplemented with motivating applications in a wide range of areas including natural language processing, computer vision, bioinformatics and music analysis.

<td>GEC1: A-F REQUISITE: Natural Language Processing (NLP) is a branch of Artificial Intelligence that focuses on the design of computer systems for processing, understanding, or communicating in natural language. This graduate level course covers statistical and machine learning approaches for solving fundamental tasks in NLP, such as language modeling, part of speech tagging, syntactic parsing, word sense disambiguation, semantic role labeling, coreference resolution, and semantic parsing. Students will also learn about major applications of NLP, including information retrieval and web search, information extraction, question answering, machine translation, sentiment analysis, text mining, and speech recognition.</td>

**COURSE LISTING**

**SORTED BY College, Department/School, Prefix**

**ELIGIBLE GRADES:**
- GEC1: A-F

**REQUISITE:**
- CTCH 1250
- BMT 2000
- MATH 1200 or higher or concurrent or Math placement level 2
- MATH D005 or Math Placement Level 1 or higher and WARNING: Not CTCH 1891
- C or better in MATH D005 or Math Placement Level 1 or higher and WARNING: Not CTCH 1891
- C or better in MATH 1200 or Math Placement Level 1 or higher and WARNING: Not CTCH 1891
- C or better in CTCH 1600 or 1891
- C or better in CTCH 1610
- C or better in CTCH 1610
- C or better in CTCH 1620
- C or better in CTCH 1620

**COURSE DESC:**
- A hands-on approach to the use of computer tools to support activities in project communication including event planning, personnel record keeping and scheduling. Uses project management and database software applications to plan, design, track and analyze data and activity. Preparation of e-portfolio and posting to the Internet.
- Social Media Content Creation focuses primarily on content creation and maintenance, in both traditional and anonymous platforms, applicable to several social media outlets with a focus on educational and business creation and benefit.
- Students learn about a variety of social media platforms, the transmission of content within, and potential outlets for content creation, along with applicability in educational, professional, and personal scenarios.

**Course Listing**

### EECS

#### Basic Electrical Engineering II
- **Title:** Basic Electrical Engineering II
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3143
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** ET 3132
- **Course Desc:** Semiconductor devices, small signal analysis, amplifiers and oscillator circuits, pulse and digital circuits. No credit if electrical engineering major.

#### Electromagnetics and Materials I
- **Title:** Electromagnetics and Materials I
- **Component:** Lecture
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3214
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2324 or MATH 440
- **Course Desc:** Explores Maxwell's equations through an overview of properties of materials, electrostatics, magnetostatics and electrostatics, and magnetostatics and electrodynamics.

#### Electromagnetics and Materials II
- **Title:** Electromagnetics and Materials II
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3223
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 3214
- **Course Desc:** Continuation of EE 3214. Application of field theory to solution of problems from various branches of electrical engineering with emphasis upon physical interpretation. Included are relation of field theory to circuit theory, Poynting's theorem, stored energy and power flow, complex fields and power, TEM waves, uniform plane wave, boundary conditions, wave reflection and refraction in various mediums. Theory and applications of transmission lines and waveguides, Antenna theory, antenna types, and Friis transmission link equations. Theory and applications include radio frequency and light propagation.

#### Linear Signals and Systems
- **Title:** Linear Signals and Systems
- **Component:** Lecture
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3334
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2114 and EE 2324
- **Course Desc:** Develop an understanding of the relationship between signals and systems. Methods for the analysis of continuous-time signals and linear time-invariant systems will be covered in depth. Includes concepts of convolution, Fourier series and Fourier transform, and Laplace transform, with applications in analysis and design of frequency selective filters, communication and control systems. Also develop an awareness of discrete time signals and systems, and an awareness of state space representations of linear systems.

#### Linear Signals and Systems
- **Title:** Linear Signals and Systems
- **Component:** Recitation
- **Cred Hours:** 4
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3334
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2114 and EE 2324
- **Course Desc:** Develop an understanding of the relationship between signals and systems. Methods for the analysis of continuous-time signals and linear time-invariant systems will be covered in depth. Includes concepts of convolution, Fourier series and Fourier transform, and Laplace transform, with applications in analysis and design of frequency selective filters, communication and control systems. Also develop an awareness of discrete time signals and systems, and an awareness of state space representations of linear systems.

#### Applications of Digital Logic Design
- **Title:** Applications of Digital Logic Design
- **Component:** Laboratory
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3343
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2324
- **Course Desc:** Develop an understanding of digital devices including diodes, bipolar transistors, and FETs. Develop an awareness of digital electronics, complementary MOS logic design and bipolar logic circuits. Small-signal modeling and linear amplification also covered. Includes computer-aided analysis and design.

#### Electronics I
- **Title:** Electronics I
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3343
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2324
- **Course Desc:** Develop an understanding of electronic devices including diodes, bipolar transistors, and FETs. Develop an awareness of digital electronics, complementary MOS logic design and bipolar logic circuits. Small-signal modeling and linear amplification also covered. Includes computer-aided analysis and design.

#### Digital Signals and Systems
- **Title:** Digital Signals and Systems
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3513
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** EE 2324 or EE 2114
- **Course Desc:** Introduction to discrete-time signals and systems including convolution, z-transforms and frequency response.

#### Computer Organization
- **Title:** Computer Organization
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3613
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** CS 2400 and EE 1024
- **Course Desc:** Computer organization and architecture with emphasis in the design of single and multicore architectures; quantitative cost, performance-power trade-offs, Amdahl's Law, instruction set architecture (RISC), assembly language programming, number representations, adders and simple ALUs, integer and floating point computer arithmetic, single and multi-cycle implementation of control and data-path design, pipelining with hazard detection, memory hierarchy and memory management, cache and virtual memory, and I/O devices. Term paper/project involving computer hardware design and system simulation required.

#### Applied Probability and Statistics for Electrical Engineers
- **Title:** Applied Probability and Statistics for Electrical Engineers
- **Component:** Lecture
- **Cred Hours:** 3
- **Repeat Hours:** 0
- **General Education:** N
- **Perm:** U30
- **Level:** 3713
- **Subsidy:** 0
- **Eligible Grades:** A-F
- **Requisite:** MATH 2302 and WARNING: No credit if taken after ISE 3210
- **Course Desc:** Fundamentals of statistics and probability and the ability to apply them to problems in electrical engineering.

**COURSE DESC:** Develops proficiency in the utilization of programmable logic controllers. Topics covered include programming, architecture and applications.

**ELIGIBLE GRADES:** GEC1: A-F

**REQUISITE:** EE 321 or 3232

**WARNING:** No credit for both this course and the following (always deduct credit for first course taken): ETM 3420

**COURSE DESC:** Courses in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with the emphasis on physical concepts and applications.

**EE 5900 Special Topics in Electrical Engineering**

Students in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; characteristics and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with emphasis on physical concepts and applications.

**EE 5853 Electronic Navigation Systems**

Introduction to radiating systems, including descriptive parameters, radiation integrals, current distributions and their effect on antenna patterns, and how antenna arrays function. In addition, waveguiding systems at microwave and optical frequencies discussed.

**EE 5773 Foundations of Hardware Security**

Introduction of electric power system engineering and analysis. Emphasis on the design of advanced architectural concepts for multicore processors; performance trade-offs for multicore systems; advanced pipelining; superscalar and dynamic scheduling; limits of instruction level parallelism, multithreading and multicore systems; multi-level caching; virtual memory; I/O fundamentals and techniques; classification of parallel machines; shared memory multiprocessors; cache coherence, interconnection networks and clusters. Term paper/project involving computer hardware design and system simulation required.

**EE 5753 Computer Network Communication**

Computer networks with an emphasis on the design and working of the Internet. Protocol layers, service models, HTTP, FTP, electronic mail, UDP, TCP, congestion control, hierarchical routing, Internet protocol (IP), IPv4, IPv6, data link layer, error correction and detection, multiple access protocols, Ethernet, bridges, hubs, wireless links, PPP, ATM, multimedia over IP, 4G wireless, Bluetooth. Basic queueing theory and delay analysis. Basic security mechanisms, such as encryption, authentication and firewalls.

**EE 5733 Communication Engineering**

**EE 5683 Computer Architecture**

Students in this course study the basic scientific and technological aspects relevant to physics of classic and novel nano-structured materials in photovoltaic devices; physical models of solar cell operation; characteristics and design of common types of solar cells; approaches to increasing solar cell efficiency; engineering of the large-area solar cell modules using single and multi-junction solar cells; stand-alone and grid connected PV module design and components and PV economic analysis. The focus is on the latest knowledge of the mechanisms of solar energy conversion and concepts of standard and novel solar cell devices and PV modules engineering and applications. Examples of recent photovoltaic systems are presented and analyzed, helping students to understand the factors driving conversion efficiency and to stimulate them to apply this knowledge to their own solar cell development ideas. The course provides principles that are developed with the minimum of mathematics and with emphasis on physical concepts and applications.

**EE 5673 Embedded Systems**

The course covers the basics of computer systems, including software and hardware. Students are expected to have basic knowledge of digital logic and Register-Transfer Level (RTL) design, but no specific background in security/cryptography is necessary. Contemporary issues including recent research in hardware security are discussed.

**EE 5633 Microwave Theory and Devices**

The course covers basic concepts in hardware security, which is different from software, network and systems security. Lab sessions give students hands on experience with performing attacks, developing countermeasures, and implementing secure hardware building blocks. Students are expected to have basic knowledge of digital logic and Register-Transfer Level (RTL) design, but no specific background in security/cryptography is necessary. Contemporary issues including recent research in hardware security are discussed.

**EE 5503 Introduction to Electric Power System Engineering and Analysis**

Principles and theory of operation of electronic navigation systems with emphasis on avionics; aircraft instrumentation, VOR, DME, Inertial, ILS, MLS, GPS, and air traffic control. Special Topics in Electrical Engineering: Selected topics of current interest in electrical engineering.

Computer Aided Analysis of Electronic Networks

ELIGIBLE GRADES: GEC1: A-F

Fault Testable Design

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Basic concepts of reliability. Physical faults and testing. Test generation for combinational and sequential logic circuits, random testing, and signature analysis. Fault tolerance and circuit redundancy, self testing and fault-safe design, fault tolerant VLSI design, practical fault tolerant systems. Self testing, design for testability, built-in test, boundary scan testing, IEE standards.

Nanoelectronic Devices and Applications

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Introduces fundamental and advanced concepts required for the understanding of electronic and ionic transport in micro and nanoscale devices. Reviews theory elements such as effective mass, band structure, electrostatics, screening, low and high-field transport, and scattering. Explores novel design tools and numerical techniques used for simulation of practical devices. Examines more closely the structure, operation, design principles, advantages and disadvantages, applications and future prospects for a wide range of traditional (diodes, MOSFETs, bipolar transistors etc.) and advanced (MODFETs, HBTs, nanowire and nanotube transistors, single-electron transistors, memristors, graphene devices, plasmonic devices, bio-molecular devices). On an orthogonal direction, surveys a number of critical technology fronts that many of devices reviewed may play an important role (ultra-low or high-power applications, high-performance solar devices, flexible electronics, THz devices and bio-nano sensors).

Nonlinear System Analysis I

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Introduction to nonlinear dynamical systems analysis: nonlinear dynamical system models, second-order nonlinear behaviors by phase plane analysis, including multiple equilibria, qualitative behaviors near equilibrium points, limit cycles and bifurcation; demonstration of chaotic behaviors by simulation; existence, uniqueness and sensitivity of solutions; Lyapunov stability and its assessment; input-output stability.

State-Space Methods in Control

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Introduction to state-space methods for control system analysis and design. Topics include basic state-space concepts, writing state equations, solution of the state equation and the matrix exponential, relations to transfer functions, controllability and observability, stability, state-space methods of design including state feedback, state estimation, servomechanisms and an introduction to optimal control.

Integrated optics and passive photonic devices in integrated technologies.

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Students taking this course must have had undergraduate courses in electromagnetic wave theory, differential equations, and vector calculus. This course is designed as an introduction to the basic elements of passive integrated optical devices. In the first part, we focus on the development of optical waveguides and investigate the utilization of these structures in passive photonic circuits. Critical properties such as waveguide loss, mode coupling, material loss, power flow, anti-guiding, coupling to optical fibers, and device fabrication will all be covered. In addition, to get a better understanding of the operation of these circuits, students will be required to simulate many of these structures using Matlab throughout the course. In the second part of the course, we extend this analysis to specific devices and practical applications. Modulation of the optical field through acousto-optic and electro-optic effects is studied, as well as the current technology of these structures. Light detectors are presented, focusing on the theory of light-matter interaction and operation of various light detection systems. The detection of light is presented with an analysis of sensors as integrated detectors. Finally, recent progresses in integrated optics and novel concepts are studied to motivate research in these areas.

Integrated Optoelectronics and Photonics

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Course focuses on the underlying physics and engineering behind devices that drive today's optoelectronics technology. In this course students study important details of structural properties, band structure, electrical transport, and optical and magnetic properties of contemporary semiconductor structures. Effects of dimensional physics and strain, two important driving forces in modern technology, will be emphasized and discussed in the light of layered structures. Furthermore, students will have an opportunity to focus on selected topics including: selected advanced concepts in semiconductor band structure, energy transfer, defects, impurities/doping, spontaneous material polarization, electro-optic and magnetoe-optic effects. These are the key modern semiconductor concepts relevant to active novel optoelectronic devices. The course will have a format of recitation and discussion. Students will be required to use programming tools to solve more mathematically complex problems.

Modern Optical Materials and Devices

ELIGIBLE GRADES: GEC1: A-F

COURSE DESC: Provides introduction and overview of modern materials used in optics and optoelectronics including semiconductors and meta-materials. Topics extend from materials science to engineering of optoelectronic and photonic devices. Emphasis on understanding fundamentals relevant to applications in integrated optical systems combining optical emission and detection from the IR through the visible to the UV, linear and nonlinear optical phenomena, dynamics of optical processes, magneto- and electro- optics, high-excitation effects. Well established photonic and optoelectronic devices, plus novel device approaches based on the latest technological developments explored.

**EE 7183: Reinforcement Learning**

_COURSE DESC:_ Advanced topics in nonlinear dynamical systems analysis: Regular and singular perturbations, passivity and dissipativity, frequency domain analysis methods such as the describing function and absolute stability.

_ELIGIBLE GRADES:_ GEC1: A-F  

_REQUISITE:_ EE 6233 or 623

_**Course Description:**_ This course will provide a comprehensive introduction to reinforcement learning as an approach to artificial intelligence, emphasizing the design of complete agents interacting with stochastic, incompletely known environments. Reinforcement learning has adapted key ideas from machine learning, operations research, psychology, and neuroscience to produce some strikingly successful engineering applications. The focus is on algorithms for learning what actions to take, and when to take them, so as to optimize long-term performance. This may involve sacrificing immediate reward to obtain greater reward in the long-term or just to obtain more information about the environment. The course will cover Markov decision processes, dynamic programming, temporal-difference learning, Monte Carlo reinforcement learning methods, eligibility traces, the role of function approximation, and the integration of learning and planning. The course will emphasize the development of intuition relating the mathematical theory of reinforcement learning to the design of human-level artificial intelligence.

"Reinforcement learning is learning what to do---how to map situations to actions---so as to maximize a numerical reward signal. The learner is not told which actions to take, as in most forms of machine learning, but instead must discover which actions yield the most reward by trying them. In the most interesting and challenging cases, actions may affect not only the immediate reward, but also the next situation and, through that, all subsequent rewards. These two characteristics---trial-and-error search and delayed reward—are the two most important distinguishing features of reinforcement learning."

This course will prepare you to study computational principles and hardware organization of what we mean by intelligence and goal-directed behavior. How to motivate machine to act on its own, yet to satisfy a desired objective? How machine interaction with environment leads to better behavior, better understanding, and success in its mission? What are the computational issues in doing this efficiently and in real time?

**EE 7213: Cognitive Neuroscience and Embodied Intelligence**

_COURSE DESC:_ This course considers neurological, psychological, and structural models of intelligence. It uses these models as a basis for discussion and development of new models that may exhibit potential for creating embodied intelligence. The majority of biological intelligence creatures are simple, yet they can achieve complex information processing that current artificial intelligence cannot match. Can we use these simple models to learn how to design better artificial intelligence? Thus this course is a combination of what we know about intelligence with discovery what makes it possible.

The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined.

_COURSE DESC:_ Cognitive neuroscience focuses on understanding how the brain embodies the mind, using biologically inspired models made of neuron-like processing components. This subject lies at a cross-section of neuroscience and cognitive psychology, and involves developing models that illustrate brain functions, observed cognitive phenomena and their behavioral manifestations. These models are used to develop embodied agents that interact with the environment through a physical body that is able to perceive and act on the environment.

The emphasis in this course is on the development of the concept of self-organizing, learning neural systems with locally interconnected processing components (neurons and minicolumns). Neural-net implementations of pattern recognition algorithms provide important, practical advantages by allowing fast realization of parallel, iterative procedures. Self-organizing neural networks that implement associative spatio-temporal memories, statistical self-organization and learning, goal creation and goal oriented development of the memory structures will be discussed. An example self-organizing neural system simulating biological systems will be examined.

**EE 7233: Nonlinear System Analysis II**

_COURSE DESC:_ Advanced topics in nonlinear dynamical systems analysis: Regular and singular perturbations, passivity and dissipativity, frequency domain analysis methods such as the describing function and absolute stability.

<td>COURSE DESC: Good knowledge of Fourier transforms, properties, basic DSP: sampling, DTFT, and discrete time filtering (grad DSP course EE6713) required. Structured to cover two areas: the broad area of time-frequency (TF) analysis, and the focused application of wavelets to various signal processing tasks. In TF analysis, covers the fundamental need for this type of analysis, the uncertainty principle, densities, characteristic functions, and mathematical representations, the short-time Fourier transform and Spectrogram, the Wigner distribution, other TF distributions. Various examples will be used to illustrate the power and challenges of TF analysis. In the wavelet section, covers TF analysis to the use of wavelets, and covers multiresolution analysis, 1D and 2D compression of signals and images, noise reduction, and signal modulation. MATLAB Wavelet Toolbox used to implement, study, and visualize the operation of wavelet filter banks.</td>

COURSE DESC: Doctoral dissertation research and writing.

ELIGIBLE GRADES: GEC5: CR, PR, F

REQUISITE: GEC5: CR, PR, F

ENT EECS SEC 1034 Introduction to Cybersecurity
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: The course covers basic concepts in computer security at an introductory level. Students are given a high-level overview of various concepts in computer security. Both technical and non-technical aspects such as risk management, incident analysis, disaster recovery, legal and ethical issues, as well as emerging topics such as electronic voting and cyber warfare are covered.

ENT EECS SEC 2244 Introduction to Secure Digital Systems
ELIGIBLE GRADES: GEC1: A-F
COURSE DESC: The course introduces students to the design and security of digital circuits, digital systems and digital components using digital logic. The topics will provide a bridge between simple digital circuits that consist of a few gates and advanced large-scale circuits such as a pipelined microprocessor. Students will be introduced to modern hardware design languages, as well as the necessary simulation and analysis tools for these languages. Starting from simple registers, the course builds knowledge of both combinational and sequential digital circuits. Students will implement simple digital designs and transfer them to a Field Programmable Gate Array (FPGA) for testing. The security of digital circuits, threats such as trojans and countermeasures such as testing, verification and certification will be discussed. Assured digital microelectronics and their importance in society will be discussed.

<td>A first course for students with no programming background who intend to use programming tools. The content starts with basic programming structures: data types, variables, program flow and its control, loops, functions, exceptions, classes and modules. Those topics are covered in Python or similar language with coverage of debugging and verification techniques. Then it extends to topics of using programming tools for engineering applications, data analysis, data manipulation, data visualization, with introduction of another tool, Matlab, Excel VBA or similar. By the completion of the course students gain necessary skills to apply modern programming and data techniques in variety of engineering and other disciplines.</td>

<td>GEC1: A-F REQUISITE: From hand tools, stirrups, and windmills to lasers, batteries, and biotechnology, human history and technology can only be understood together. This course explores the ways in which technology has shaped human society. It focuses on important themes, including the Industrial Revolution, infrastructure, and the historical relationship between technological experts (including engineers, technologists, and scientists), society, and the state. The course pays particular attention to technology's social and historical consequences; the human and environmental contexts of technological infrastructures; and historical debates over what constitutes an ethical model of technological innovation. It covers the historical and modern development of professions based on technology, including those requiring licensure. In this way, the course provides a critical perspective for an informed approach to technology and society in the modern world.</td>

### ET 4000: Professional Engineering Fundamentals Review
- **Component**: Lecture
- **Cred Hours**: 1
- **Repeat Hours**: 0
- **General Education**: N
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Provides a compact review of basic engineering principles and illustrated by practical solutions.

**Eligible Grades**: GEC1: A-F

**Requisite**: Sr only

**Course Desc**: Review of basic engineering principles. Provides a compact review of basic engineering principles and illustrated by practical solutions.

### ET 4000: Professional Engineering Fundamentals Review
- **Component**: Recitation
- **Cred Hours**: 1
- **Repeat Hours**: 0
- **General Education**: N
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Provides a compact review of basic engineering principles and illustrated by practical solutions.

**Eligible Grades**: GEC1: A-F

**Requisite**: Sr only

**Course Desc**: Review of basic engineering principles. Provides a compact review of basic engineering principles and illustrated by practical solutions.

### ET 4520: Appropriate Technology in Developing Countries
- **Component**: Lecture
- **Cred Hours**: 3
- **Repeat Hours**: 0
- **General Education**: N
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Provides a compact review of basic engineering principles and illustrated by practical solutions.

**Eligible Grades**: GEC1: A-F

**Requisite**: Jr only

**Course Desc**: Review of basic engineering principles. Provides a compact review of basic engineering principles and illustrated by practical solutions.

### ET 4521: Engineering and Technology Projects in Developing Countries: Design
- **Component**: Lecture
- **Cred Hours**: 3
- **Repeat Hours**: 6
- **General Education**: N
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Through selected readings, class presentations, discussions, and case studies, students seek an understanding of leadership and its importance and effectiveness in achieving goals with followers. Successful leaders in engineering and other fields visit the class and share their knowledge of leadership. Several written reports and oral presentations on leadership case studies are required during the term.

**Eligible Grades**: GEC1: A-F

**Requisite**: Soph or Jr or Sr and Russ College of Engineering and Technology major

**Course Desc**: Students will contribute their discipline specific knowledge and skills as part of a multidisciplinary team to meet the engineering needs of a community in a developing country. Specific areas of need could include water treatment and distribution, energy systems, light construction, sanitation, and small-scale industries. As part of the team, they will be required to contribute to the development of specifications and a project plan including budget, materials, schedule and labor. They will be expected to master new relevant technical and non-technical material through attendance at lectures, consultation with faculty and professional mentors and self study. They will be also be expected to design and develop a sub-system that is part of a solution that is economically, environmentally, socially and ethically appropriate.

### ET 4900: Special Topics in Engineering Technology
- **Component**: Lecture
- **Cred Hours**: 1 to 15
- **Repeat Hours**: 999
- **General Education**: N
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Provides a compact review of basic engineering principles and illustrated by practical solutions.

**Eligible Grades**: GEC3: A-F

**Requisite**: CR

**Course Desc**: Specific course content will vary with offering.

### ET 4910: Cooperative Education Field Experience IV
- **Component**: Internship
- **Cred Hours**: 1
- **Repeat Hours**: 10
- **General Education**: BLD
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Specific course content will vary with offering.

**Eligible Grades**: GEC1: A-F

**Requisite**: ET 1500

**Course Desc**: Required of, and limited to, students on approved co-op work assignments. Prior approval required before a student registers. Credit earned is not applicable toward specific degree requirements, but will accumulate in the student's academic credit total. In addition to continual monitoring of student's progress by the cooperative education coordinator and the faculty advisor, participating students are required to submit a final report of their activities.

### ET 4914: Engineering and Technology Project in Developing Countries: Implementation
- **Component**: Internship
- **Cred Hours**: 1 to 3
- **Repeat Hours**: 9
- **General Education**: BLD
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Students will contribute their discipline specific knowledge and skills as part of a multidisciplinary team to meet the engineering needs of a community in a developing country. Specific areas of need could include water treatment and distribution, energy systems, light construction, sanitation, and small-scale industries. As part of the team, they will be required to contribute to the development of specifications and a project plan including budget, materials, schedule and labor. They will be expected to master new relevant technical and non-technical material through attendance at lectures, consultation with faculty and professional mentors and self study. They will be also be expected to design and develop a sub-system that is part of a solution that is economically, environmentally, socially and ethically appropriate.

### ET 4950: Robe Leadership Seminar
- **Component**: Seminar
- **Cred Hours**: 3
- **Repeat Hours**: 0
- **General Education**: I
- **Perm**: U30
- **Subsidy Level**: 0

**Course Description**: Through selected readings, class presentations, discussions, and case studies, students seek an understanding of leadership and its importance and effectiveness in achieving goals with followers. Successful leaders in engineering and other fields visit the class and share their knowledge of leadership. Several written reports and oral presentations on leadership case studies are required during the term.

**Eligible Grades**: GEC1: A-F

**Requisite**: Permission required

**Course Desc**: Through selected readings, class presentations, discussions, and case studies, students seek an understanding of leadership and its importance and effectiveness in achieving goals with followers. Successful leaders in engineering and other fields visit the class and share their knowledge of leadership. Several written reports and oral presentations on leadership case studies are required during the term.

### ET 5300: Engineering Economy
- **Component**: Lecture
- **Cred Hours**: 2
- **Repeat Hours**: 0
- **General Education**: N
- **Perm**: G40
- **Subsidy Level**: 0

**Course Description**: Provides knowledge of the economic consequences of engineering decision processes, and methods for evaluation of engineering design alternatives in terms of costs and benefits. Topics include time equivalence of money, annual cost method, present worth method, rate of return method, depreciation, benefit/cost, break-even analysis, income taxes, equipment replacement and risk.

</table>

Appropriate technology can be roughly defined as technology that best suits the economic, social, environmental, and political as well as technological needs of the people employing it. It is apparent from this definition that the development and analysis of appropriate technologies requires the consideration of elements from multiple fields. For both technical and non-technical majors, provide a synthesis experience through an introduction to appropriate technology in developing countries. Using case studies and a design project, students will examine the economic and anthropological as well as technical aspects of problems in developing countries.

A typical topic would be Engineering Writing, where students develop the ability to think critically as a professional communicator.

Employing texts drawn from engineering, provide guidance for thesis/dissertation preparation. Practice organizing and synthesizing ideas with special attention given to correctly using and referencing the work of others. Writing assignments focus on topics of the students choosing. Emphasis is placed on the style of writing appropriate for academic discourse in engineering.

Prepare graduate students for the teaching responsibilities that they will have as faculty members. Focus on strategies for effectively teaching engineering courses and include a variety of methods used by current faculty. Learn skills useful for communicating with team members, giving presentations, training others, or otherwise communicating and training people outside of academic settings.

Integration of engineering and technology topics through group discussion with focus on technical communication.

Specific course content will vary with offering.

Doctoral research in mechanical and systems engineering.

Doctoral dissertation research, under the direction of a graduate faculty member.

**Course Descriptions:**

- **Tool Design**: Basic jig and fixture design. Relation to manufacturing processes, material requirements, gauging and cutting tools, with emphasis on repair and maintenance.
- **Automation and Robotics II**: This course expands on basic robot programming to include position registers, edit commands, and robot I/O. Topics include an introduction to interfacing a PLC to a robot utilizing discrete inputs and outputs as well as basic principles of transferring robot and PLC Programs via an Ethernet Network.
- **Materials and Material Testing**: Applications of materials used in manufacturing and design, including metals, plastics, ceramics, lubricants, coatings, and testing methods.
- **Process Control**: Analysis of basic principles of quality control, including frequency distribution, sampling inspection, and charts and gauges related to inspection. Field trips and laboratory projects are part of lab activity.
- **Self-Directed Work Teams**: Industrial work teams and the methods used to make them work. Explores use of continuous improvement and project management as they relate to the team concept. Includes field trips to local companies utilizing these methods.
- **Lean Enterprise**: This course provides an overview of the structure and tools of Lean, a systematic method for the elimination of waste within a manufacturing system without sacrificing productivity in order to add value to a product or service. Lab activities give students opportunities to recognize forms of waste in a manufacturing process and apply methods used to remove it. Methods covered include Poka Yoke, Why-Why-Why, Value Stream Mapping, Kaizen, Kanban, SS and Six Sigma.
- **Safety Management**: In this course students study OSHA regulations and other safety programs related to manufacturing. Topics include job safety analysis, personal protective equipment, accident prevention and emergency planning.

**Eligible Grades:**

- GEC1: A-F
- GEC3: A-F, CR

**Requisite:**

- ENGT 1170 or IMT 1170
- ENGT 2220
- ENGT 2630
- Math placement level 1 or higher or (Math D004 or Math D005)
- ENGT 2300 or IMT 2300

**Additional Information:**

- Specific course content will vary with offering.

**COURSE DESC:** Study of a particular topic pertinent to the engineering technology field under the direction of a faculty member. May be repeated.

**ELIGIBLE GRADES:** GEC3: A-F, REQUISITE: Warning: No credit if ETM 1120

| ENT     | ETM  | ENGT | 2990  | Externship | Laboratory | 3          | 0             | N                | U20 | 0       |

**COURSE DESC:** Performance of engineering technology technician duties in a supervised, unpaid experience, working 24 hours/week with a local company. Efforts are made to rotate experience.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: (ENG 1150 or IMT 1150) and (ENG 1170 or IMT 1170) and (ENG 1200 or IMT 1200) and (ENG 2200 or IMT 2200) and (ENG 2400 or IMT 2400)

| ENT     | ETM  | ENGT | 1000  | Introduction to Engineering Technology and Management | Lecture | .5        | 0             | N                | U30 | 0       |

**COURSE DESC:** Introduction to career opportunities, job functions, and professional organizations in engineering technology and management. Discussion of curriculum and departmental procedures.

**ELIGIBLE GRADES:** GEC6: CR, PR, F

| ENT     | ETM  | ENTM | 1020  | Engineering Graphics II and Dimensional Metrology | Laboratory | 3          | 0             | N                | U30 | 0       |

**COURSE DESC:** A continuation of ET 1100. Covers 2D and 3D drawing using Solid Edge software, general dimensioning, geometric dimensioning, surface texture, threaded fasteners, and welding symbology. Note, detail and assembly drawings will be created for all the parts of two different products (metric and inch). The focus is on creating accurate 3D geometry and usable 2D production drawings. The dimensional metrology part of the course will cover the verification of general and geometric dimensions using basic measuring instruments.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: ET 1100

| ENT     | ETM  | ENTM | 1020  | Engineering Graphics II and Dimensional Metrology | Lecture | 3          | 0             | N                | U30 | 0       |

**COURSE DESC:** A continuation of ET 1100. Covers 2D and 3D drawing using Solid Edge software, general dimensioning, geometric dimensioning, surface texture, threaded fasteners, and welding symbology. Note, detail and assembly drawings will be created for all the parts of two different products (metric and inch). The focus is on creating accurate 3D geometry and usable 2D production drawings. The dimensional metrology part of the course will cover the verification of general and geometric dimensions using basic measuring instruments.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: ET 1100

| ENT     | ETM  | ENTM | 1030  | Enterprise Computer Methods | Laboratory | 3          | 0             | N                | U30 | 75      |

**COURSE DESC:** Study of common methods used to solve enterprise computing problems. Emphasis is on developing solutions using common software, installing, configuring, and maintaining computer hardware. Topics include project management (Project), spreadsheets and business software.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: (ENGT 1150 or IMT 1150) and (ENGT 1170 or IMT 1170) and (ENGT 1200 or IMT 1200) and (ENGT 2200 or IMT 2200) and (ENGT 2400 or IMT 2400)

| ENT     | ETM  | ENTM | 1030  | Enterprise Computer Methods | Lecture | 3          | 0             | N                | U30 | 75      |

**COURSE DESC:** Study of common methods used to solve enterprise computing problems. Emphasis is on developing solutions using common software, installing, configuring, and maintaining computer hardware. Topics include project management (Project), spreadsheets and business software.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: (ENGT 1150 or IMT 1150) and (ENGT 1170 or IMT 1170) and (ENGT 1200 or IMT 1200) and (ENGT 2200 or IMT 2200) and (ENGT 2400 or IMT 2400)

| ENT     | ETM  | ENTM | 1100  | Introduction to Manufacturing Processes | Lecture | 3          | 0             | 2AS              | N    | U30     | 0       |

**COURSE DESC:** Survey of industrial materials and processes with applications to current manufactured consumer products. Emphasis is placed on generic processes such as forming and separating as applied to a variety of industrial materials.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: Warning: No credit if ETM 1120

| ENT     | ETM  | ENTM | 1130  | Introduction to Engineering and Technological Sciences | Laboratory | 3          | 0             | N                | U30 | 0       |

**COURSE DESC:** This class introduces the interdisciplinary scientific principles that drive modern engineering how the scientific process is applied for practical means. The course includes the study of materials and processing, mechanical reasoning, documentation, and design. The course is open to students of all disciplines and does not require a background in sciences and engineering for successful completion.

**ELIGIBLE GRADES:** GEC1: A-F, REQUISITE: Warning: No credit if ETM 1120

| ENT     | ETM  | ENTM | 1130  | Introduction to Engineering and Technological Sciences | Lecture | 3          | 0             | N                | U30 | 0       |

**Course Descriptions:**

**Applications of Object Oriented Programming**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- Introduction to object oriented programming and rapid application development using a modern object oriented programming language. Lab activities emphasize the development of programs for various enterprise applications, including the use of graphics and integration with other network-based programs and databases.

**Applications of Object Oriented Programming (Lecture)**

- **Component:** Lecture
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- Introduction to object oriented programming and rapid application development using a modern object oriented programming language. Lab activities emphasize the development of programs for various enterprise applications, including the use of graphics and integration with other network-based programs and databases.

**Manufacturing Design & Laboratory**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- To study the basic processes of metal separating used in the manufacturing industry. Problems will be presented which will demand practical application in mechanical metal separating processes utilizing manual and Computer Numerical Controlled Machines (CNC). The course also includes an introduction to geometrical dimensioning and tolerancing and precision measurement to learn the capabilities and limitations of each machine process. Problem Analysis will be emphasized.

**Product Design (Laboratory)**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- Study of product design from concept to release for production, with emphasis on design for manufacturability. Lab activities include the design, development, and creation of mockups and prototypes.

**Hydraulics and Pneumatics**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- Application of hydraulic and pneumatic principles to common industrial uses for power transmission and mechanism control. Includes a study of hardware and circuitry. Lab activities include construction and testing of fluid power circuits.

**Database Applications & Analytics**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**
- **Majors Set Aside:**

- Teaches students relational database fundamentals, SQL programming skills, and simple database analytics. Includes principles of database design techniques and implementations. Upon completion, students will understand SQL functions, interfacing with an object oriented programming language, and will be able to write SELECT, INSERT, UPDATE, and DELETE statements. Extensive hands on exercises are used throughout the course to reinforce the material using Windows Forms and ASP.NET.

**Electronics and Micro-Controllers**

- **Component:** Laboratory
- **Credit Hours:** 3
- **Repeat:** 0
- **General Education:** N
- **Perm:** U30
- **Subsidy Level:** 0
- **eLearn Options:**

**COURSE DESC:**
- **ETM 3540 Industrial Materials**
  - Study of methods and systems used to automatically identify objects including bar coding, optical character recognition, magnetic stripe, radio frequency identification and biometrics. Various industrial applications will be studied, such as inventory, production control, order picking, and shipping/receiving. Lab experiences emphasize application of automatic identification technologies.

- **ETM 3620 Supervision and Leadership**
  - Examine the basic principles of supervision, planning, organizing, staffing, leading, and controlling people and operations and their application to actual on the job situations.

- **ETM 3630 Quality Management Systems**
  - Theory and practice of quality assurance principles in manufacturing. Includes statistical process control, process capability, gage capability, and quality management.

- **ETM 3635 Quality Assurance and Technical Documentation**
  - Theory and practice of quality assurance principles in manufacturing. Includes statistical process control, process capability, gage capability, and quality management and an introduction to ISO documentation.

- **ETM 3700J Professional and Technical Writing**
  - This course covers the preparation, research, organization, draft writing and revisions of technical documents such as proposals, product descriptions, mission statements, reports, and instructions.

- **ETM 3820 Contemporary Project Management**
  - Students learn skills, tools, and strategies needed for technical projects. The focus of the course will be on key project management phases such as initiating, planning, executing, controlling, and closing projects as well as topics such as project integration management, scope management, time management, cost management, human resource management, communications management, and risk management.

- **ETM 3830 Enterprise Project Management**
  - Students will learn the skills, tools, and strategies needed to meet the needs of managing engineering projects. The topics in the course include initiating, planning, executing, controlling, and closing projects as well as project integration management, scope management, time management, cost management, human resource management, communications management, and risk management.

- **ETM 3900 Industrial Materials**
  - Advanced theory and application of common industrial materials. Includes examination of the behavior of ceramics, polymers, metals, and composites.

**COURSE DESC:**
- **Automation, Robotics & Control Systems:**
  - Theory and application of digital controls in manufacturing. Includes relay logic and closed loop control theory using negative feedback. Introduction to sensors, signal conditioning, circuits, D-A and A-D conversion, and Proportional-Integral-Derivative (PID) control. Lab experiments include programmable logic controllers and control of mechanical, hydraulic, pneumatic and electrical systems. Theory and application of robots used in manufacturing. Includes classifications, sensors and feedback mechanisms, robot/computer communications, and programming. Also includes selection of robots based on task and economic criteria. Lab activities include on- and off-line programming of robots and developing robotic work cells.

- **Purchasing and Supply Chain Management:**
  - Purchasing, logistics and Supply Chain Management principles are key functions in most enterprises. This class provides an introduction to the key fundamentals and tools used in these functional areas.

- **Advanced Project Management:**
  - Students learn and practice with advanced concepts and strategies in project management with case-study approaches. The course focuses on agile strategies, change management, team building, critical communication, risk management, and leading complex projects.

- **Operations and Production Capstone:**
  - Capstone course requiring student teams to use knowledge from previous technical and business courses to develop and conduct an operations project. Senior project elements include process planning and control, resource planning, communications, evaluating cost considerations, quality assurance, business documentation, and project management.

- **Operations Management Capstone I:**
  - Operations Management and Capstone I requires student teams to use knowledge from previous technical and business courses to develop a manufacturing operations plan for a product. This includes production planning and control, resource planning, product cost considerations. Students will experience current concepts of the new product development process. Emphasis will be placed on team work, project management, computerized production documentation, lean manufacturing, integration and optimization of business technical functions, operations within a manufacturing enterprise, Quality assurance planning and six sigma, product design and development. Lab activities include prototype and engineering builds of the product designed by the student teams. This is the first of the Capstone I and II series, which has to be taken in consecutive semesters.

- **Operations Management Capstone II:**
  - Operations Management and Capstone II requires student teams to use knowledge from previous technical and business courses to develop a manufacturing operations plan for a product. This includes production planning and control, resource planning, product cost considerations. Students will experience current concepts of the new product development process. Emphasis will be placed on team work, project management, computerized production documentation, lean manufacturing, integration and optimization of business technical functions, operations within a manufacturing enterprise, Quality assurance planning and six sigma, product design and development. Lab activities include prototype and engineering builds of the product designed by the student teams. This is the first of the Capstone I and II series, which has to be taken in consecutive semesters.
Operations Management Capstone II
GE:1: A-F, REQUISITE: ETM 4621 and 3510 and 3630 and Sr and WARNING: No credit for this course if the following is taken (keeps credit for the following course, as defined by department): ETM 4620
For ETM 4622, the enrolled students use the documentation and project plan developed as a part of their culmination experience in ETM 4621. Based on this documentation they develop a production management plan, tooling, an inventory control system, work instructions and a quality control plan to execute a production run. Students gain supervision and management experience through this where each group manages their peers to produce 15-25 products in a 6 hour time period. Students evaluate their peers as part of the assessment. The same student groups from ETM 4621 are maintained and so students complete ETM 4621 and 4622 in two consecutive semesters. Under special circumstances students are assigned to one of the teams in ETM 4622 by the instructor.

Safety Management
GE:1: A-F, REQUISITE: BUSL 2550 and ETM 2180 and 3620 and advanced standing in ETM
Study of organized industrial safety programs, including historical and social perspectives and the responsibilities of management to provide a safe work environment.

Maintenance Systems
GE:1: A-F, REQUISITE: ETM 3010 and 3320 and (2080 or 2180) and advanced standing in ETM
Study of organized industrial maintenance systems. Includes environmental control, structural, mechanical, and electrical requirements.

Special Topics in Engineering Technology and Management
GE:3: A-F, CR, REQUISITE: Specific course content will vary with offering.

Independent Study in Engineering Technology Management
GE:1: A-F, REQUISITE: Advanced Standing in ETM
Selected topics that are current and relevant to engineering technology management.

Lean Enterprise Methods
GE:1: A-F, REQUISITE: In today's world, organizations compete in a global market place. In order to compete successfully, organizations must eliminate all forms of waste from their process, through continuous improvement processes. Lean enterprise principles provide methods to achieve these goals. Lean operational approaches provide an organization with a set of methods and tools to assist in the identification and then continuous eliminations of waste and enterprise improvements.

Special Topics in Engineering Technology and Management
GE:4: A-F, CR, PR, REQUISITE: Specific course content will vary with offering.

SPCL TOPICS IN TECHNOLOGY
GE:2: A-F, PR, REQUISITE: Selected advanced topics that are current and relevant to industrial technology. May be repeated.

Project Management I
GE:1: A-F, REQUISITE: This course is the first part for the Project Management course sequence. Students learn the skills, tools, and strategies required to meet the needs of managing complex projects. The topics in the course include initiating, planning, executing, controlling, and closing projects as well as project integration management, scope management, time management, cost management, human resource management, communications management, and risk management.

ELIGIBLE GRADES: GEC1: A-F  REQUISITE: No credit if taken after EMGT 6110 or 6500
COURSE DESC: This course is an investigation of both risk and change management as it relates to project management. The topics in the course include initiating, planning, executing, controlling, and closing projects. The concepts of project risk and change management are presented, and students have opportunities to develop risk and change management plans.

COURSE DESC: Lean and Six Sigma were developed as two separate methodologies to remove waste and improve quality in an enterprise. The overlap in the principles, tools and skill sets utilized by both methods has led to a synergy in how they are applied in conjunction with each other in an organization. This course introduces students to fundamental principles of lean and six sigma methodologies and provides them with key problem solving tools utilized in both methods.

COURSE DESC: This course is the capstone experience for students completing the Masters of Project Management graduate degree program. Students develop a case study portfolio with a client company to implement the project management tools and techniques learned within the degree program. Students have the option of working with the instructor to complete either the CAPM or PMP certification exams from the Project Management Institute as desired by the student. The culminating deliverable will be the individual student project portfolio.

COURSE DESC: This is a variable credit special topics course in Project Management to allow students to pursue special interest topics under the guidance of an instructor of record. This course number may also be used by an instructor wishing to teach an experimental course for consideration into the masters of project management program. A course proposal must be submitted, reviewed by program coordinator and approved by the department chair before the start of the course.

COURSE DESC: In this course the student conducts independent research towards a thesis under the direction of a graduate faculty member. The culminating deliverable is a completed thesis.
Course Listing

**Foundations of Engineering Management**
- Lecture: 4
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6000 or enrolled in MS7271 program
- COURSE DESC: Engineering management skills and executive leadership are required to meet the demands of both global and domestic markets. Modern corporations require engineering leadership to be creative and progressive, and to produce profitable performance. Will help engineers to broaden their understanding of management activities and their unique applications to engineering functions.

**Communication Skills for Engineers**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6100
- COURSE DESC: Designed to help students develop the ability to think critically as a professional communicator by asking appropriate questions that will enable them to understand, develop, and produce effective communication using the following elements of thought: purpose, basic concepts, information sources and needs, underlying assumptions, inferences/conclusions, implications/consequences, points of view, and questions raised and addressed.

**Statistics for Engineering Management**
- Lecture: 4
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6110
- COURSE DESC: Application of statistics to control of quality and reliability in products and services, including training in the Six Sigma DMAIC problem-solving methodology. Topics include: tools and techniques for statistically-based product and process improvement; design of acceptance sampling and process control systems, including attention to inspection and test methods; and design and implementation of quality assurance programs, including nonstatistical dimensions of quality systems.

**Advanced Six Sigma**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6110
- COURSE DESC: This course is continuation of the EMGT 6110 - Six Sigma, and covers DMAIC problem-solving methodology in details. Topics covered include tools and techniques for product and process improvement and the application of basic and advanced statistics to problem solving. Emphasis on application of the methodology.

**Six Sigma Green Belt Exam**
- Lecture: 5
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6110
- COURSE DESC: This course allows students to demonstrate proficiency in basic Six Sigma methods. Students review the provided materials and then take an exam.

**Six Sigma Black Belt Exam**
- Lecture: 5
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6111 and EMGT 6112
- COURSE DESC: This course allows students to demonstrate proficiency in advanced Six Sigma methods. Students review the provided materials and then take an exam.

**Six Sigma Black Belt Project**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6111
- COURSE DESC: This is the culminating experience of the Six Sigma Black Belt Certificate. Students apply the components of Six Sigma methodology taught in previous courses to demonstrate their ability to use the appropriate methods for process improvement.

**Quality Systems**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6100
- COURSE DESC: Focuses on the concepts of total quality management including: philosophies and frameworks of quality management, incorporating quality into strategic planning, leadership, process measurement and management, continuous quality improvement, and ISO 9000. Original writings by major figures in the quality movement, such as Deming, Juran, Tagucji, etc. will be discussed.

**Information Systems Engineering**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6200
- COURSE DESC: An introduction to applications of information systems industry and the design and implementation of these systems. Students will also learn systems modeling and how to utilize a Rapid Application Development tool to extract needed information from a database.

**Database Information Systems**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6200
- COURSE DESC: Introduction to application and development of database systems in industrial engineering. In addition, students will learn database theory, data modeling and SQL.

**Data Acquisition and Predictive Analytics**
- Lecture: 3
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6100 and EMGT 6200; no credit if taken after MBA 6325
- COURSE DESC: The objective of this course is to teach students modern methods for data analysis and predictive analytics. Students will gain the knowledge to develop advanced queries and apply statistical methods and machine learning to analyze the data and make predictions in the engineering management context.

**Project Management**
- Lecture: 4
- General Education: N
- Cred Hours: 0
- Perm: G40
- Subsidy Level: 0
- ELIGIBLE GRADES: A-F
- REQUISITE: EMGT 6000 or enrolled in MS7271 program
- COURSE DESC: Modeling of project constraints using network methodologies such as CPM and PERT to determine activities critical to meeting a project deadline. Utilization of stochastic models to determine possible changes in the critical path. Will also cover methods for economic evaluation of project alternatives.

**Course Descriptions:**

- **Graduate Internship in ISE:** An internship course of ISE graduate students. Students wishing to gain external experience during their studies should enroll in this course for credit when performing an internship.

- **Special Investigations:** Independent study of a topic in industrial and systems engineering under the guidance of a faculty member.

- **Analysis of Engineering Systems I:** Introduction to structured approach to analysis of engineering systems. Development of design requirements, functional and operational architecture of a system design. Application of Analytic Hierarchical Process (AHP) in system analysis and design. Introduction to autonomous agent systems.

- **Probabilistic System Analysis:** Overview of analytical methods for the analysis of discrete and continuous time systems. Modeling and analysis of discrete systems using petri nets and DEDS models. Application of systems dynamics to modeling and analysis of manufacturing inventory systems, supply chain management, and other complex systems.

- **Reliability in Design:** Intended to prepare engineering management students to design statistically valid experiments and to analyze the results of those experiments to draw conclusions about a population. Analysis methods covered include hypothesis testing and regression.

- **Design for Reliability:** The objective of this course is to provide graduate students with fundamental knowledge related to reliability and applied statistics, and advanced modeling and computational tools.

- **Information Systems Design:** Design and control of information flow in organizations. Information storage and retrieval by data processing equipment. Students practice design of information systems in laboratory.

- **Environmental Systems Engineering:** Discusses issues of modern world where industrial systems/products provide comfort and convenience that everybody enjoys. However, some of these activities may adversely affect the environment (land, water, air) if we do not address some of potential problems carefully.

- **Seminar Transportation Systems:** Seminar planning, design and management transportation systems. Various aspects of transportation such as transportation modes (land, sea, air, rail) to safety and security issues are also discussed. Different transportation modeling approaches will also be introduced and studied (network modeling, mathematical modeling, and simulation, etc.).

- **Artificial Neural Networks in Manufacturing:** The objective is to help the student develop an overall understanding of neural networks and how they can be used in manufacturing.

- **Seminar in Industrial and Systems Engineering:** Current topics and new developments in industrial and systems engineering. Focus on research methods and resources for conducting thesis research. Required of all ISE graduate students.

- **Seminar on the Control of Inventory and Manufacturing Systems:** Advanced inventory control, scheduling, production planning, materials planning, lot sizing and forecasting techniques. Integration of scheduling and materials planning (Schedule-Based MRP/ERP), integration of inventory control and finite capacity scheduling. Critical review of current literature on inventory and manufacturing control.
